It can be said that the installation of meters has reduced electricity waste to a certain extent. Following the installation of 740 meters in a collective residential area belonging to militarymen, the average [monthly] electricity bill for each household has gone down from 17 to 12 dong. But it is now difficult to install meters because when electric cables are available, meters are not and vice versa.

Many things have happened which we can hardly understand. How is it that while an entire section of the urban areas does not have an electricity at all, there is electricity day and night for lighting and not agricultural production purposes in a number of villages outside the city? How is it that while power is cut off in a long row of houses along some street, electricity is supplied only to the tea-shop belonging to a certain lady? Who has priority and why is there priority? There is the opinion that under the present circumstances, it is possible to cut off power from one area on a given day and from another area on another day and to issue an explicit notice on the occasion. Nevertheless, it is necessary to supply electricity on a regular basis to vaccine culture installations, chicken egg hatcheries, smelting furnaces and so forth.

It is true that the Electricity Service cannot immediately satisfy many demands. The function of the many branches of the Electricity Service is to insure the safety of electricity supply, to manage the electricity network within their respective scopes and so forth. However, their present principal duty is merely to assign their personnel to switch the electric current off and on once in the morning and once in the afternoon--a job which is usually done contrary to technical regulations and which, if repeated, will cause damage to the equipment.

Following the example set by Cua Nam Subward, we deem it advisable to transfer the task of managing electricity to the subward level. However, the result obtained is unsatisfactory after this task has been assigned to 20 other subwards. The reason is that many subwards have not yet been able to organize an electricity management board, that the job of the Electricity Service and that of the subward administration have not yet been properly coordinated and that many other tasks have been slowly carried out.

Certainly, no one will conclude that the present shortage of electricity is caused by the Electricity Service alone but we demand that this service take many more positive and better measures to distribute electricity equitably and nationally and to manage electricity more firmly. The primary need is to set good examples. Many leading cadres and workers in the Electricity Service have frequently cited the case of the minister of power who is residing at the collective residential area of the Minister of Power in Doan Thi Diem Street and also of the vice minister [of power] who is residing in Ham Long Street--both of them having declined the offer of priority electric installation for the benefit of their households and having willfully accepted to share in the joy and sorrow of the people when electricity is supplied and when it is cut off. These are brilliant examples set by people in the electricity sector but it is regrettable that they are not numerous. Electricity is still wantonly used in the collective residential areas belonging to the electricity sector. Meters have been installed only for the sake of appearance in these areas because people do not need to know the amount of electricity consumed. The use of electricity there leaves much to be desired and has nothing praiseworthy.

We have made many complaints and known many things: Electricity is stolen at some ten thousand places, the electricity supplied for production purposes is diverted to normal consumption and that provided for daily activities is used in production. If the use exceeds the output, the current transformer will burn out and this will cause electricity failure in a chain reaction. What must be done? What effective measure will be taken by the Electricity Service? Of course, there are thousands of difficulties but the task to be done is not an impossibility.

Now more than ever, electricity is a problem concerning the entire people. The people will detect shortcomings and the public security forces and the administration will take action. It is no longer wise to let the electricity sector solve this problem by itself. It is absolutely necessary that all the sectors concerned join their forces and minds to solve this problem with all their revolutionary enthusiasm in order to change the situation. They must not let the days and months go by uselessly.

HEAVY INDUSTRY AND CONSTRUCTION

BRIEFS

HAIPHONG RAILWAYS IMPROVEMENT—The Haiphong railways sector has merged the Haiphong railway station with the Haiphong port station to unify administrative work and to increase cargo handling capacity. Thanks to the merger, more than 80 percent of goods scheduled for September had been delivered to their destinations as of 20 September. They included 12,000 tons of machinery, more than 5,000 tons of foodstuff and 6,700 tons of fertilizer and coal. [BK071337 Hanoi Domestic Service in Vietnamese 2300 GMT 30 Sep 81]

HA BAC OIL PIPELINE—The Ha Bac provincial people's committee and the rear service general department recently held a joint army-people conference to discuss measures to protect the province's oil pipeline more effectively. Over the past 3 years, the province has discovered many cases of thefts and misappropriations of fuel, thus saving a considerable quantity of oil and fuel for the state. FURTHER EXPLOITATION OF CAPACITY TO MAKE INDUSTRIAL GOODS

Hanoi NGHIEN CUU KINH TE in Vietnamese No 2, Apr 81 pp 26-31, 64

[Article by Vu Huy Tu: "Exploiting Potential Capacity of Industrial Enterprises To Step up Production of Consumer Goods"]

[Text] Potential Development of Productive Capacity

Although at the present time we are encountering many difficulties in production and the standard of living, in many places, particularly in any industrial enterprises, there are potential capabilities that can be exploited to step up consumer goods production. These potentialities exist in different forms but are concentrated in three major sources:

1. Productive capacity.

There are at present in our country thousands of industrial installations producing consumer goods, but their capacity is used only to a small extent, normally 40-60 percent. In some installations this figure is even smaller. If we fully take advantage of their productive capacity, we can increase the current volume of industrial consumer goods by 30-40 percent.

This capacity for producing consumer goods can be further exploited in almost all heavy industrial production installations (machine and metallurgical works, chemical plants, etc.) because the rate of use of their equipment is still low. By combining the use of raw materials and fully using discarded materials and products, our machine and metallurgical enterprises can make such metal consumer goods as pots and pans, knives, scissors, teaching materials, toys, etc. Chemical enterprises can make dyes, animal feed, plastic articles, etc.

In reality, by so doing in the last 3 years many enterprises in the North of the Ministry of Engineering and Metals were able to use discarded materials to make hundreds of secondary goods (bicycle parts, children's bikes) valued at tens of millions of dong. Only a single local machine enterprise (in Hoang Lien Son Province) with about 500 workers was capable of making dozens of consumer goods from discarded materials valued at 700,000 dong and thus boosting its profit by 50,000 dong.

Potential capacity remains very great in the case of seasonal production enterprises (sugar, tea, fruit processing, etc.). Ordinarily these enterprises operate for only 4-6 months per year. Therefore, their productive capacity (equipment, shops, labor, etc.) is usually used to a very low degree. If production is reorganized and rearranged to make other nonseasonal products by fully using discarded materials and products, they can make additional lines of goods and bring about very great economic results. For instance, in the case of the Yen Bai (Hoang Lien Son) sugar and alcohol enterprise employing about 200 workers, if it fully uses its own discarded materials and the locally available fruits and sugar cane to make secondary products and makes arrangement to have some production lines to manufacture vermicelli, it will be able to triple the value of its total production and to have a profit 6 times as large as it is now.

The possibility of stepping up consumer goods production still depends on the ability to acquire technical and industrial equipment and to supply the consumer goods-producing enterprises with different kinds of materials from the heavy industrial enterprises. At present, in spite of difficulties, this ability is quite considerable, particularly in terms of improving techniques and repairing important machinery and equipment for the consumer goods-manufacturing industrial enterprises.

2. Raw materials.

Although we currently are short of and in a state of being passive about raw materials, a lot of waste is found in the production, transportation, storage and use of raw materials. By overcoming this situation we surely can make additional products that will be a great source of accumulation.

As an example, in the paper industry, if we use nearly all of the bagasse discarded by the sugar and molasses-producing installations, we can make about 47,000 tons of paper, or 65 percent of the total 1979 paper production and nearly 50 percent of the total output as planned in 1980. With the quantities of cotton and yarn discarded by the Vinh Phu Textile Mill alone, every year tens of thousands of blankets could be made; however, only about 50 percent of the discarded materials have been collected and used. In 1979 the Nam Dinh Textile Mill was able to make .5 million meters of cotton material by using the discarded yarn it had collected. The Sao Vang Rubber Factory discarded tons of materials each day. According to the past regulations of the municipality, it was allowed to sell to the Bat Trang Porcelain Enterprise and the Hanoi communications and transportation sector only certain kinds of discarded materials, such as scrap rubber cloth and defective rubber at the price of 5 dong/100 kilograms. What it did not sell had been piling up more and more and created an environmental pollution problem. Periodically, the factory had to hire people to remove the piles at higher costs than the sales made at the above price. In the last few years, it was using the discarded materials to manufacture secondary goods. By the end of 1979 the factory supplied the market with 50,000 square meters of covering sheets, tens of thousands of pieces of hard material, tens of thousands of "economy" bicycle tires and tubes, etc.

The sources of discarded materials that can be used to make industrial consumer goods and exist in the form of discarded scattered materials, such as scrap paper, scrap metals, bottles, broken glass, etc., have not yet been fully exploited.

In the countries having developed production like the Soviet Union and the German Democratic Republic, the purchase and use of such discarded materials receive good attention from the state and are incorporated into its policies. The Soviet Union has a state-operated network handling the purchase of bottles and old cans throughout the country on a year-round basis. Every year, all enterprises, organs and schools, along with their production, work and training plans, have to draw up plans for purchase and delivery of discarded metals to the state. In the German Democratic Republic, currently the production of steel is about 8 million tons, but the discarded metals used account for up to 75 percent of the total quantities of metals processed; of the total quantities of materials used to make paper the scrap paper and discarded paper materials collected in society account for 60 percent.

In our country, there had been in the past a few "scrap metals women" who bought such items but their business was small-scale and very negligible. In the last few years, through the "small plan" movement, teenagers throughout the country were collecting thousands of tons of paper of all kinds. Some localities for the first time had special organs in charge of purchasing discarded materials: they collected and supplied considerable quantities of discarded materials to production installations. For instance, in the past years, the Hanoi Discarded Materials-Purchasing Corporation purchased and supplied enterprises with scrap iron and steel of all kinds, cotton materials in small pieces, etc. enough for them to make tens of thousands of pairs of cans for carrying water, tens of thousands of pots and pans, hundreds of thousands of hats and clothes for children, thousands of blankets, etc. In 1980, the Rang Dong Light Bulbs and Vacuum Bottles Factory in Hanoi used 300 tons of broken glass and thus reduced by 25 percent the quantity of raw materials it needed for production.

Another very important ability is the fact that many enterprises have been carrying on a program of making replacement materials by themselves: the Rang Dong Light Bulbs and Vacuum Bottles Factory has made by itself phosphoric acid, synthetic paint and glue for light bulb ends. The Van Dien Battery Factory has been able to make by itself 70 of 100 kinds of materials necessary to manufacture batteries, which it had to import for some time from foreign countries. The Hanoi Transformers-Manufacturing Factory has used domestic materials to replace imported materials in the production of silver bakelite and has thus saved tens of thousands of rubles (foreign exchange) each year.

The potential ability to have more materials can be seen in the fact that the rate of use of materials per unit product in many enterprises is still too high; there still are too large quantities of discarded materials; and the quantities of materials being lost during their purchase, transportation and storage and on the production line are still quite large -- all of these can be greatly reduced. For instance, in a tobacco factory losses of tobacco leaves after sorting during storage only amounted to about 7 percent a year. In the case of a knitting enterprise, during a single shipment of yarn from Haiphong to Hanoi in 1978, 34.2 percent of the load got wet because of rains, with 1.2 percent of the damaged yarn (or close to 2 tons) being eventually thrown away because of excessive decay. At present, the Rang Dong Light Bulbs and Vacuum Bottles Factory has on its production lines the problem of defective products going at the rate of nearly 20 percent for the inner parts of vacuum bottles and nearly 30 percent during assembly of light bulbs.

By improving the designing of products and applying advanced industrial methods, many enterprises have succeeded in reducing the rate of use of materials in their production. This is a correct and basic direction to take to exploit and fully use internal potentialities, to increase volume of production, to raise quality, to lower costs of products and to increase accumulation without expending more capital for investment in construction of new enterprises while assisting the state in resolving the great current difficulties in connection with materials.

3. Labor.

As compared with the developed industrial countries in the world, our country has a very great advantage as it has an abundant source of labor and our people are industrious and creative; have many unique and refined traditional occupations and handicrafts; and create many lines of goods of high value, which cannot be made by machine yet and are greatly appreciated in the world market (such as articles made of bamboo and rattan, fine art items, pottery and porcelain wares, rugs, mats, etc.). At present, the average use of time in enterprises is still very low (5-6 hours/day), labor norms are far from progressive and a large number of enterprises have excess labor (normally 5-10 percent, as much as 30 percent in some enterprises). Every year the country as a whole has about 1.5 million people more reaching the labor age. A considerable number from this abundant labor source will supplement the industrial installations producing consumer goods. Moreover, the potential supply of labor coming from families that can be drawn into consumer goods production is also very abundant. Many production installations have tried to give their workers and civil servants additional jobs by organizing production of secondary goods, giving them raw materials and assigning them the jobs of making parts or details of products or simple products. As a result, they have been able to make more products while avoiding the need to extend the areas used for production in the enterprises.

Of the above-mentioned potentialities some are only temporary as they are now put to use after a long period of remaining idle and left aside; this kind of capacity is great in the beginning but will gradually decrease. For instance, the broken machines and equipment are now put to use after being repaired, or the discarded materials that are put away too long and materials stored in warehouses for a long time are again exploited and used. However, there are many kinds, especially for our present situation, that are very basic, lasting and great. For instance, the potential application of scientific and technical progress to improving the organization of production, labor and management can increase the volume of production, raise quality, extend the lines of goods and improve economic effectiveness in general. Or creating replacement materials, using combined raw materials, improving and renewing equipment, reducing the rate of materials losses in production and reducing the quantities of discarded materials and discarded products, which are unavoidable due to our industrial production characteristics and occur everyday in our enterprises -- these are also very great potentialities.

It is obvious that the potential capacity to produce consumer goods is still very great and varied in almost all industrial enterprises, but so far it has not been much exploited and used. There are many reasons, but on the basis of the characteristics of the organization of management of industrial consumer goods production we can mention the following major ones:

- We have not yet realized fully the importance of maintaining balance and ensuring the production and supply of raw materials, semifinished products, tools and parts, materials for wrapping and packing, as well as repairing equipment in industrial production in general, and in consumer goods production in particular. Consequently, we have not yet drawn up organizational plans and overall plans for these matters.

- Generally speaking, within the national economy as a whole, different sectors and localities have not yet created the first bases for organization and planning of production (such as basic investigation, forecast, planning, etc.), nor have they paid proper attention to the supporting production jobs, which serve the main production, and to planning the rate of progress of production, etc. in enterprises.

- Since the managerial mechanism has not yet been flexible and rational, it has failed to encourage enterprises, collectives and individual working people to exploit and fully use internal potentialities to step up production.

Some Major Guidelines, Measures

1. Along with drawing up plans for long-term development, we must as an immediate step create favorable conditions for fully using the productive capacity of existing enterprises.

In the spirit of the resolution of the 6th Plenum of the VCP Central Committee, we think that in the immediate future we should build anew only the enterprises which manufacture the types of products that no production installations in the country are making or some production installations are making but in quantities that are not enough to satisfy all our need. Before we build anew any installation, we must calculate the necessary conditions for it to operate up to its full capacity. To do so, along with calculating the capital to be invested, we must consider the sources of raw materials, equipment, energy, etc. not only on the basis of direct need as we have long known it but also in terms of the long period of existence of the enterprises to be built. In reality, quite a few sectors and localities have been concerned with building the new installations and have failed to make full calculations of the conditions that would guarantee production and economic effectiveness; consequently, quite a few enterprises have stopped operating a short time after their dedication, or have caused great waste of invested capital, labor, etc. because of less-than-at-full-capacity operations.

As for the enterprises now in operation, on the basis of inventories to evaluate productive capacity, we must restore balance to production lines. On the basis of their existing capacity, calculate the needs for equipment, additional industrial equipment, raw materials and energy. On the one hand, they resolve problems by themselves within what they can do; on the other hand, a resolution must be submitted in time to the superior organ for the adoption of measures to maintain balance and to resolve them within sectors and localities. A measure of top importance is to plan and organize the construction of production installations to make tools, spare parts, molds, important secondary materials and large bags, which have long been in short supply creating big problems for production. For instance, shuttles, spindles, dyes for the textile sector; tools, spare parts and molds for such sectors as machine, wood, plastic, rubber, pottery and porcelain; chemicals of various kinds (acids, soda, etc.) for the paper and other industries; cigarette paper, wrapping paper for cigarettes, tea, cookies and candies; bottles of all sizes and boxes for enterprises making alcohol, beer, soft drinks, table sauces, pharmaceutical products, etc.

Another important measure is to plan and reorganize production of the repair service sector to raise the capacity and quality of repair, to guarantee on-time and good-quality repairs of machines and equipment, to restore and modernize old broken equipment being left unused for some time, to improve the ability to make our own equipment so as to manufacture simple and more common goods and to properly handle raw materials and discarded materials prior to processing. For instance, to manufacture by ourselves equipment to be used in the processing of subsidiary food crops, noodle and feed; to press noodle, bricks and tiles; to sterilize bagasse used to make pulp, etc. On the other hand, as to the kinds of spare parts of equipment we are still incapable of making, we must have long-term import plans to ensure active and stable production.

2. While organizing and planning for production and business, we must ensure an overall balance of productive capacity.

To maintain a balance of all factors combined is applicable not only to the principal production link but also to the ones that provide support and services, a balance of material resources and values on the basis of applying the method of intersectoral balance.

Within the framework of the national, sectoral and local economies, we must ensure proportioned allocation of workers of high technical levels and of major materials and equipment, and besides the common materials, the specialized materials, such as cotton, yarn and dyes for the textile sector; pulp and chemicals for the paper industry, etc. Within individual enterprises, maintain a balance of details, in accordance with the principle of maintaining by oneself internal balance, extending cooperative relationships with other units and at the same time gaining the assistance and efforts of the superior echelons to maintain balance. Here we must have a rational division of ranks among the central administration, localities and production installations, along the line of the central administration ensuring major and principal balance and localities and production installations maintaining an overall balance on the basis of exploiting their own strengths.

3. We must step up organization of production of secondary products from discarded materials.

To organize production of secondary products from discarded materials or to organize secondary production-business sections in industrial enterprises is a necessary trend of in-depth investment in industrially developed countries to raise economic effectiveness. It is trend that is attached more and more importance and is being perfected everyday. It is also a matter of special importance for our country as the need for consumer goods greatly exceeds our productive capacity. To organize and extend the secondary productive sections of enterprises is an important measure to fully use our potential capabilities; in addition, as production is simple in terms of technical and industrial matters, in most cases we can resolve problems by ourselves to help to promote a "burst of production" as mentioned in the resolution of the 6th Plenum of the VCP Central Committee. However, as the recent realities indicated, next to the positive aspects there still were incorrect "bursting" tendencies that should be corrected and overcome. For instance, production of secondary goods was not linked with the principal production; production was to be achieved at any cost, without any consideration of economic effectiveness, nor any guarantee of product quality. To sell at prices set deliberately to be "profitable" for one's own enterprise created obstacles and losses for other units or consumers; to fail to correctly obey regulations about materials, labor and capital created material, labor and technical conflicts between individual production on the one hand and collective and state-operated production on the other, and between localities and the central administration and among localities themselves, thus adversely affecting the consolidation of socialist production relationships.

To overcome the above-mentioned phenomena, we think that as in the case of organization of production in general, in regard to organizing production of secondary products in our enterprises we must pay attention to these major problems:

a. Reorganizing production must be combined with consolidating and perfecting the socialist production relationships. Along this line, we must create favorable conditions for further developing the leading role of the collective and state-operated production sector, particularly in the case of the central state-operated enterprises, by fully using its productive capacity and raising the effectiveness of production and business. To do so, an important measure is to ensure the supply of raw materials, tools and parts, electric power and other necessary conditions for production and consumption of products and to extend cooperative production among enterprises, cooperatives, small industrial and handicraft production teams, in accordance with rational division of work in production of goods or in partial execution of industrial projects. The resolution of the 6th Plenum of the VCP Central Committee clearly indicates that "organization of production must be along the line of gradual concentration aimed at achieving great economic effectiveness." Aiming at such a purpose, in addition to the effects of series of state policies and procedures about economic management (such as investment policy, raw materials policy, distribution and consumption policy, procedures for management, planning, etc.), we must have a tight coordination and close leadership of the joint organs (planning, materials, labor, finance and banking), as well as the managerial organs. At the same time, we must extend the direct relations among production installations on the basis of the economic contract system. While the state tries to quickly improve and supplement its purchase, price and raw materials policies, localities and production units must overcome any local and factionalist ideas, seriously carry out contracts and purchase plans on the basis of respecting the common interests of the national economy and supply raw materials on a priority basis to state-operated production installations, first the central ones.

As they consider application for business registration or assign plans for making new products, the organs responsible must study market needs, productive capacity and ability to ensure supply of materials, particularly the sources of raw materials for each sector, locality and type of product to be made. They must pay attention to the kinds of materials that are discarded ones in one enterprise but are used in the production of the main product in another enterprise, such as scrap iron from the enamelware factory being used to make bottle caps in distilleries and breweries. Attention must be paid to strengthening specialization and cooperative production along the line of individual installations producing only few lines of goods but in larger quantities, and fully using the most favorable conditions in connection with the force of skilled labor, technical and industrial equipment, sources of raw materials and consumption of products, etc.

b. In organizing secondary production we must satisfy these basic needs: secondary production must be closely linked with the principal one, originate from market needs and the current capacity of enterprises and bring about economic effectiveness in both secondary and principal production.

In the present economic situation of our country, as we calculate economic effectiveness, we must pay proper attention to the social aspects. For instance, fully using labor, materials and equipment; raising the social product and income for enterprises, workers and civil servants; helping to ensure and gradually improve the standard of living; preventing and eliminating negative phenomena and illegal activities. To do so, we must have total and accurate plans for secondary production. The main contents of these plans must include:

- Correctly determining the lines of goods and volume of production (or the size of secondary production components). The goods that we intend to produce must satisfy domestic and local (or export) needs and are based on the productive capacity (strength) of enterprises (such as discarded materials, equipment, surplus labor, etc.).

- Calculating to maintain balance of various aspects (like in the principal production). For instance, about materials, we must calculate quantities, types and sizes of discarded materials and products, the items that must be purchased and from what sources they are obtained, capacities of presently available machinery and equipment, additional quantities to be acquired and from what sources, surplus labor force, overtime and family labor, background, allocation, strengths, occupational tradition, additional capital investment, etc.

- Determining economic effectiveness of secondary production components by means of such actual norms as volume of products (material resources, value), income, production expenses, profit, labor productivity, average number of days and hours worked by each worker, amount of labor (number of workers in a year) used and rate of increase of wages and bonuses and average income per year of each worker. The effectiveness of secondary production and business actually results from the best use of working power (first of all to provide jobs for additional people and those who work at home after the working hours in organs and enterprises); the full use of discarded materials and products; and the proper use of existing machinery and equipment up to their full capacity, or the repairs and use of old and broken equipment, which has been left unused for a long time.

As in the case of the principal production components, when we organize the secondary production and business components, we must ensure the highest degree of concentration, cooperation and specialization. In this spirit, it is not necessary for every enterprise to make complete products out of its own raw materials or discarded materials, but instead it can do a partial job in one or more of its components and turn the semifinished products thus obtained to another enterprise capable of continuing the processing job on a larger scale and with more modern technical and industrial capabilities. For instance, the fruit canning factory everyday discards a large volume of pineapple pieces. They can be used to make a number of secondary goods (sweet beverage, liquor, etc.) and the residue, in its turn, can be processed to become feed. In our opinion, the fruit canning factory should process this residue only partially and then supply it to the feed processing enterprise, which will process it further by mixing with other raw materials and grinding them together, using specialized equipment of larger capacity and power. Only by so doing can we both ensure product quality and raise the level of concentration and specialization of production and thus bring about high economic effectiveness for society.

As we organize processing of secondary products, we must closely combine production with the market, pay attention to improving quality, extend or change the lines of goods whenever we find that a certain product has reached saturation or is difficult to sell. In addition to making complete products, we also need to produce parts and details of products for replacement (such as bicycle parts, straps and buckles for plastic slippers, covers and clips for fountain pens, covers and blades for oscillating fans, etc.). Depending on the actual conditions of individual enterprises, we can extend the form of assigning on contract the making of small and simple parts and details to workers and cadres as additional jobs to be done in their home. This form creates favorable conditions for expanding production while avoiding additional capital investment by enterprises to extend the area of production, hence, lightening the managerial burden.

4. We must improve and supplement a number of procedures and policies.

Along with adopting, supplementing, changing and perfecting the major state policies as mentioned in the resolution of the 6th Plenum of the VCP Central Committee, to create favorable conditions for actively expanding the components making secondary products, we must pay attention to resolving a number of major problems as follows:

a. On the basis of ensuring the right degree of centralization as prescribed by the state, we must boldly divide the work to local sectors and production installations in connection with planning and management of the lines of goods produced. The central administration is to take care of planning and management only in regard to the necessary and most important industrial consumer goods for the people's consumption and export and leaves the management of other goods to localities and enterprises. For the goods that come under central management, there must be planning and the central administration must assume total management to ensure an overall balance covering from the supply of raw materials, major equipment, capital and technical labor to production, circulation and distribution. These goods belong to the list of major products, and in the legal "major products" norm of the national economic plan which sectors, localities and production installations have the responsibility for producing and supplying to the central administration, these products are mostly made by the central enterprises. The ones that are to be made by local enterprises must also have balance and be given all of the major material conditions necessary just like the central enterprises.

b. By current regulations almost all products made of discarded materials must be sold by enterprises through commercial organs. This way normally restricts the initiatives of enterprises in production and business, nor does it encourage the full use of potential capabilities to increase the sources of goods for society. In the spirit of article 4 of the Statutes of State Industrial Enterprises, we think that a share of such products (about 20-30 percent) should be spared for enterprises to sell in two-way relationships.

To overcome the situation in which enterprises set prices according to their own convenience in the case of the products and materials exchanged within the two-way relationships or the ones they have the right to sell (prices that presently are much higher than supply prices and, in quite a few cases, nearly as high as free market prices), which cause difficulties and losses for consumers, the state, ministries (general departments and enterprise federations) and people's committees at all levels must set the maximum limits for these prices (perhaps not exceeding 130-150 percent of supply prices).

c. Along with strengthening the management of raw materials consumption norms in production, we must clearly determine standards for secondary products, to allow the use of some new materials in addition to the discarded materials. This way we can prevent the situation in which enterprises use large quantities of new raw materials, fail to comply with the norms for consumption of raw materials, increase the quantities of discarded materials and products coming from the principal line of production to make more secondary products and to boost their income in an illegitimate way. Moreover, we must make a distinction between products made of discarded materials and products made of raw materials in the plans that enterprises draw up for themselves. It is obvious that the former belong to secondary production and business and the latter are the results of their basic production and business; consequently, the percentages of profit coming from the two kinds of products to be put into enterprise funds are different.

d. We must strengthen the use of measures of material encouragement toward collectives and individual working people in the distribution of income coming from selling secondary products. The state should study and determine again the percentages of profit coming from products made of discarded materials along the line of increasing the shares to be put into reward and welfare funds (each fund about 25 percent), decreasing the share to be put into the production development fund (about 30 percent) and keeping the same share to be put into the budget (20 percent). In reality, many enterprises do not use up the production development-encouraging fund (because there are no materials and equipment to be bought) and put it into the saving fund.

e. Finally, we must strengthen the control by the state and superior organs over enterprises in connection with implementation of policies and procedures, particularly about supply, production, consumption, product quality, prices, etc., through registration of business in secondary goods, planning, organization of management of labor and materials, issuing of money and credit, distribution of profit, wages, bonuses, etc.

VO VAN KIET SPEECH AT HO CHI MINH WRITERS ASSOCIATION CONGRESS

Hanoi VAN NGHE in Vietnamese 1 Aug 81 pp 2,3

[Excerpt of Vo Van Kiet's speech at Congress for the founding of Ho Chi Minh City Writers Association]

[Text] Standing among the ranks of the Arts and Letters Association in the city, the literary circles have made great efforts over the past few years. On behalf of the Municipal Party Committee Standing Committee, may I convey its compliments to many comrades of ours who--though most of the overall living and working conditions have not yet been stabilized--have taken a deep interest in labor, closely followed the realities of the [artistic and literary] movement, maintained close contact with the laboring people, devoted themselves to literature and begun to reflect, under different literary forms, the deep changes occurring to life and human beings in the city. From some short years of an inceptive period full of changes, one cannot require literature to yield an abundant harvest in accordance with one's wishes. Nevertheless, all that which you have written on and about this land, about the joyful days following the liberation and about the subsequent months and years full of vicissitudes and hardships, constitutes the valuable introductory pages of a great episode of Vietnamese literature dealing with the advance of our city. Your initial achievements have immediately and partly met the book reading demands of our readers--who are increasingly looking forward to a national, revolutionary and socialist literature--and have made the first contribution to the common, nationwide literature.

We take this opportunity to ask the comrades representing the Vietnam Writers Association at the central level to convey our joint thanks to all writers throughout the country who have expressed their love for the city bearing our Uncle's name, who have deeply studied its actual situation, who have written a great deal about the new and rich theme of transformation and construction in a large city after the liberation day, who have, through their feelings and skills, encouraged our city people in each of the latter's steps forward and who have helped introduce the renovated moral facet of our city to our people throughout the country and to our friends in the world.

We also wish to ask those comrades to convey the joint gratitude of Ho Chi Minh City as a whole to the fraternal writers and friends who had come from all corners of the world to visit our city, to try to understand us and to write about our city with profound sympathy.

Being part and parcel of the entire Vietnamese literature, literature in Ho Chi Minh City has inherited and developed the achievements scored mainly in reflecting the two great wars of resistance of our nation and has made the arts and letters of our country worthy of standing among the vanguard ranks of antiimperialist arts and literatures in the present era as has been pointed out by the Fourth National Party Congress. By closely uniting with the nationwide literary writers' forces round the Vietnam Writers Association, the literary writers' forces in our city have considered it their glorious duty to reflect the struggle for the complete victory of socialism with the motto: "Everything for the socialist fatherland and for the people's happiness" and have become clearly aware of their responsibility to struggle to defend the Vietnamese culture and to contribute to making the new socialist culture of an entire new world more brilliant.

Dear comrades:

As members of the Ho Chi Minh City Writers Association, you have voluntarily attached yourselves to the [artistic and literary] movement in the city and used this land as your cultural battlefield and overall training school. The Party Organization hopes that everyone of you will progress, develop and make a contribution. In the past, I had opportunities to meet with a number of comrades and what worried me was the fact that many of them could not yet employ their accumulated capabilities and realize their aspirations. We understand that in those months and years, it was difficult to lead a stable and wholesome life and it was more difficult to live with full enthusiasm and energy to create noble moral values. It is clear that were it not for a strong organization, a party to stand beside him, everyone of us could hardly do anything good no matter how clever he might be. That is the principal reason why the results of creative efforts have been incommensurate with the capabilities of the writers' forces.

The party has helped you achieve better mutual understanding, trust and respect and draw numerous experiences from the former working method in order to clearly perceive your joint responsibilities. Therefore, you have come to this congress with a common determination to forge ahead under party leadership. I earnestly wish that this new spirit will always be upheld and developed in all your future works.

A greatly favorable condition for your congress is the fact that it is being held in the light of the new party directive on the ideological task and of the resolution of the Party Organization Executive Committee on the cultural, literary and artistic task. We do hope that by relating the specific viewpoints, lines, policies and positions of the party to the realities of life and the actual facts to be pondered by everyone while writing, your congress will conduct qualitative debates to determine very clearly the guideline for and mission of struggling through literature and building a stable and strong organization and also to reach appropriate but positive and specific resolutions which must be carried out at all costs.

Considering the general spirit, I think it necessary to stress that we have no right to turn an organization of creative laborers into a figurehead. The association must lead its creative contingent to carry out loftier creative tasks.

The objective of writing must not only be to subsist as a writer or to receive an immediate income according to the saying: "Use short-term benefits to ensure long-term ones, use outside appearance to entertain inward intentions and use children to nourish adults." The mission of literature is neither to embellish slogans nor to illustrate policies; instead of stopping after merely reflecting realities, it must develop Pham Van Dong's concept of "understanding, discovery and creation" and must tend to discover the truth of life.

We hope that writers will display a higher sense of responsibility to the readers and people. Living among the interests and aspirations of the people, sharing in their joys and worriés, extolling the truth of life and the humanitarian ideals of the party and actively participating in building a new life--all that conforms to the popular character and genuine party spirit of arts and literature. Instead of limiting itself to a correct political attitude, the party spirit must go further and be able to conquer human hearts through artistic strength and loftiness because, truly speaking, only artistic quality has a profound educational effect. From the resilience of writers in this city, we expect not the quantity but primarily the quality of their works. A great work is an interesting one which everyone reads passionately, which by itself generates delight and which exerts a broad influence and a strong attraction.

It is precisely along these lines that the Municipal Party Committee will ceaselessly try to improve the advisory and steering apparatus in the cultural, artistic and literary field, that it will carefully study and grasp the characteristics of each cultural and artistic section and that it will--while firmly upholding the banner of uncompromising struggle against all manifestations of hostile or backward ideology--show the greatest respect for all talents, resolutely support all productive labor efforts, gradually undo all ties and create conditions for a bubbling high-quality creativeness.

Concerning such a deference to artistic quality and such a tendency to fan the flames of creativeness, I am convinced that every writer and artist will completely agree with the party.

Dear comrades:

A special organization must be designed for each literary and artistic section and must have the duty to muster and organize all talents to work more effectively according to that party spirit.

The Writers Association to be founded by your congress must be a typical organization which knows how to unite with and work among all the literary and artistic circles in our city with regard to the politico-cultural life in a large city. The Writers Association must make tremendous efforts in struggling to move forward to meet objective requirements and to be worthy of its symbolic role and position.

It is very much expected that the association members will create for each other a spirit of mutual affection completely favorable for creative labor and for the development of personality and talents. It is regrettable that after taking a glance at the tasks done by you in the recent past, we have found that everyone of you often had to waste much time on trifles in your sector's activities just because of a failure to bring into full play the sense of responsibility and the right to collective ownership. We must draw experiences, formulate a new working method and find ways to manage our common task most rationally and in full equity in order to achieve permanent stability, identity of views and harmony within our organization. To set up an organization is one question and to continuously, attentively and strenuously improve it is another question. The Municipal Party Committee's organs in charge of culture, arts and letters must provide assistance for you, encourage all good intentions and regularly develop the habit of making self-criticism and criticism and exchanging views in a constructive spirit--a habit to be considered to be a weapon to continuously improve and perfect your organization.

The association will need to quickly propose specific motions on various systems and policies aimed at stepping up writing and literary research, dissertation and criticism and also at systematically training and improving the contingent of young writers. Creating material conditions for each comrade to develop his creative abilities and also for strengthening the publishing task despite the present difficulties in paper supplies is not an unsurmountable obstacle to our city. Instead, what must receive the greatest attention is to provide us with favorable conditions to rapidly heighten our political, ideological and professional standards so that we may meet the new requirements set by creative labor.

To successfully carry out this task, appropriate measures must be taken and joint efforts exerted by the Writers Association and the Culture, Literature and Art Department of the Municipal Party Committee and supported by the Propaganda and Training Department of the Municipal Party Committee. The resolute experimental implementation of the plan for and method of educating and improving writers and artists politically and ideologically must be vigorously initiated by the Writers Association's organization. I am of the opinion that, in addition to organizing systematic political study suitable for each standard and target, there must be a system of regular, periodic notices on the situation because, more often than not, the hardly avoidable flickers in the ideological domain are due to the absence of adequate information. Standing on the rather tense cultural and ideological front in our city, each of our cultural, literary and artistic combatant must be equipped with a better political sensitivity.

To firmly establish a socialist stand in artistic creation, to apply ever more skillfully the socialist method of realistic creation and to overcome formalism, simplism and naturalism in artistic creation--these are questions which you need to discuss thoroughly and about which you need to exchange views and experiences with your literary colleagues at the central level as well as in the friendly localities. If the association's activities prove useful and realistic with an ever better quality, they will constitute an invaluable investment in a new literary harvest, elevate us and unite us more closely and will certainly create at the onset a new vitality which will cause us to encourage each other to move forward, work and create.

Dear comrades:

Literature must have its share of responsibility for the actual facts of life. That the entire country is advancing to socialism is an unflagging spirit and with a determination to win and is fulfilling the sacred mission of defending the fatherland and socialism is a grandiose happening which we can see with our own eyes. In our city, the especially rich and complex realities which are continuously seething within the revolutionary mass movement constitute a source of very lively and fresh materials for literary and artistic composition.

To the past struggle we still owe works of an encompassing scope on the Vietnamese people, in general, and on this city people, in particular, during the two victorious resistances against the French and U.S. imperialists. Literature must strenuously try to create honest, noble and rich images of the new society and new man in our city so that each man, in his particular position and field, may find an echo of his own views and sentiments in the new challenges and hardships through which the everlasting virtues of the Vietnamese people become more apparent. It can be said that generally most male and female writers have not yet become really sensitive to countless new and rich traits having emerged from the movement to detect, study, improve and multiply advanced models in our city. It is not our intention to invite you here to hear about ways to lend a literary sense to reports on typical models. The question is not to waste a treasure of lively materials useful for active exploration of and pondering on man and life. It must also be stressed that in a large industrial center of the entire country, literature must not fail to pay due attention to the industrial topic but must concentrate a fixed amount of its forces on the worker who is the central character.

There are large chunks of realities for which the literary circles in our city must try to assume the heaviest responsibility. Let you adequately prepare your combat position and literary aptitudes to achieve a profound understanding to discover the numerous novelties and to truthfully and lively reflect in its entirety the substantial, hard and extremely complex socialist transformation which is going on in our city and in all areas of the southern provinces. Lengthy poems may be written about the advancement of the Mekong River delta, the Eastern Nam Bo region and the Vung Tau-Con Dao Special Zone and about numerous key economic construction centers near our city. Perhaps readers are also expecting from the literary circles in our city works which sternly and systematically criticize negative manifestations in daily life as well as the vestiges of the former society and the pernicious influence of the colonialist and neocolonialist cultures. I wish to draw your special attention to the youths' need to read literary books and also to the very great importance to be attached to children who are the future of our nation and to the 20-year-old generation who is now constituting the assault force in the task of building and defending the country.

As cadres jointly responsible for this city, we hope to have many occasions to cordially exchange broad and profound views with you on the city situation and to express for your consideration some ideas about the multifaceted literary themes offered by our city. In my opinion, to lead a local writers' association and to consider the development of literature to be one's primary goal, it is necessary to move forward in an ownership spirit, to know how to deal with subjects of literary composition found within one's own locality and to discuss ways to jointly deploy forces to compose literary works according to the most effective plan. I think that is the way to lead and manage literary creation in a spirit of socialist collective ownership and on a scientific basis. It is also earnestly hoped that each of our writers will gradually get into the habit of working according to the new method and that he will sparingly use his working time, consider his own labor productivity important, make literary compositions according to a specific plan, program and outline, create more favorable conditions and try to obtain common assistance and to provide a basis for an entire emulation movement for literary creativeness.

The concentrated area of a large city with much more available means of circulation and information than other localities is providing favorable conditions for literary creation. First and foremost, no locality is, to my mind, more propitious than this one to keenly sensing the breath of life and to the establishment of close relationships between the writers' ranks and the laboring people and the realities of the revolutionary struggle. As a great cultural center, our city gathers in its research institutes and colleges a large contingent of specialists engaged in literary research--both theoretical and critical--and also in the study of other social sciences. This constitutes an effective support to literary writers wishing to deeply investigate and ponder subjects relating to literature, arts, human beings and social life. Our city has also the honor of hosting a people very fond of literature and arts so that, with the increasingly profuse activities of an entire network of cultural institutes and clubs, we are surely in a position to hold cordial and direct contacts between writers and readers. The very precious relationships with a conversational public are indeed an endless source of energy to shore up creative enthusiasm and to improve the quality of composition.

I do hope that the Writers Association will cleverly exploit these very basic conditions which this city has been offering to us as a special favor.

Dear comrades:

Here is the last thing I want to remind you of: In what stage of the common struggle on the cultural and ideological front is our Congress for the Foundation of a Writers Association being held?

As a very conscious fighter on the cultural front, no writer in our city has the right to stand outside a rather fierce struggle against the uprising of a depraved culture aimed at reversing man into his past and also against the plot to undermine the Vietnamese culture and to attack the Vietnamese people by very cunning tricks coordinated on both the internal and external fronts and played by the defeated U.S. imperialists who are colluding ever more closely with the Beijing counterrevolutionaries. The revolutionary conscience and the individual conscience of the writer requires each one of you to react quickly, firmly and keenly to this situation.

Ever since the resistance period, we had already foreseen that the very noxious cultural policy of the U.S. imperialists which was aimed at destroying society and man would leave behind extremely serious consequences among some section of the public. However, only through the realities of the present complex struggle with a fixed degree of fierceness can we clearly feel all the depths of the problem.

The bourgeois thinking system with its high concentration level and sweeping effect which were elevated to the maximum by U.S. imperialism during the stormy war had left a rather deep impression on the psychology of the small producer and especially the urban petty bourgeoisie. The present socioeconomic situation still leaves room for the survival and individual development of the former lifestyle and thinking system. This situation has been taken advantage of by external enemies who coordinate it with a psychological warfare aimed at exercising daily effects on morale, launching cultural attacks and arousing excessive individualism and vile, bestial desires--all that with the objective of ruining the human beings of a victorious nation and weakening our fatherland on its march forward.

It is not difficult to wipe out and hunt down to the last the products of a depraved and reactionary culture. What is more, even most difficult is to rebuild human beings. Among the ranks of all cultural and artistic departments, literature has the capacity to help each man become conscious of himself and reform himself most acutely. To my way of thinking, the commonest and greatest short- and long-term mission of literature in our city is to strenuously safeguard, retrieve and continuously strengthen the Vietnamese human beings and, with all its sincere and whole heart, to promote the birth of a new socialist man who is taking shape in the struggle to transform and build all aspects of a new life and also in the resolute struggle without a minute of relaxed vigilance to defend the socialist fatherland.

If that is thoroughly understood, it will create a new and strong moral motive and will further elevate the thinking scope of the literary creation forces in our city. It is hoped that your congress will determine, for the benefit of each member of your contingent, a superior direct-combat position and a shrewder outlook proper to a combatant and will instill in him a desire to tenaciously improve his writing ability and art with the determination to win victory on the cultural and ideological front by means of his works and literature....

We firmly believe in the development prospects of literature in our city.

It is hoped that after drawing a clear-cut demarcation line for this struggle and after summoning up the new source of courage, all of our brothers and sisters will vigorously advance to become young at heart again, to unite with one another and to love and respect one another, to achieve collective ownership and to build up, stabilize and strengthen their ranks in order to be able to lead a wholesome life and to produce valuable writings.

From the invisible flame of an ideological struggle which is fierce, intensive and scorching at each minute and hour will emerge weighty works capable of moving human hearts and stirring up the society's conscience.

With this belief, I hope that your congress will debate on things to do and will pass resolutions to carry out.

I wish success to the writers on their march forward to pave the way!

POPULATION, CUSTOMS AND CULTURE

NEW DEVELOPMENT IN ETHNIC MINORITY POLICY

Hanoi DAI DOAN KET in Vietnamese 19 Aug 81 pp 2, 15

[Article by Trinh Quang Canh: "New Development in Nationalities Policy"]

[Text] Since the historic victory of the spring of 1975 our country has stepped into a new revolutionary stage. For the first time the Party's and Government's nationalities policy has been comprehensively and extensively implemented in the whole country.

In the last five years, the living realities of the situation have proved that the nationalities policy decided by the Party at its Fourth Congress for the new state has been totally correct.

Solid Development of the Nationalities Solidarity Bloc

After their defeat and rout the U.S. imperialists and other reactionary forces did not abandon their scheme to sabotage the revolution in our country. But because they do not have a foothold left, they had to use lackey organizations made up of local people in order to directly realize their postwar plans for sabotaging us: the FULRO in the Highlands and in the Cham areas of Thuan Hai, the Khmer Srey, the Khmer Krom and the White Turbans in the Khmer-populated areas of what used to be Cochinchina. These groups had all been organized, raised and commanded by the French colonialists and the U.S. imperialists, and they have long served as their henchmen. In the new situation while their patrons had to run in defeat, they thought they could raise the banners of "national liberation and autonomy for the (Dega) people," "national salvation and restoration of the Champa Kingdom," or "freedom for the lower Mekong Khmers," etc. to entice and deceive the masses.

The direct and dangerous enemies of our people have also changed the color of their skin. They now include not only the western imperialists with their "straight noses and blue eyes" but also the reactionaries among the Peking leadership who only yesterday called themselves our "comrades" and our "friends." They have used the Pol Pot-Ieng Sary clique as their henchmen, claiming themselves to be communists in order to attack us in the southwestern frontier provinces, where such actions can directly impact over 70,000 of our Khmer compatriots who are related by blood and religion with the Khmers of Kampuchea.

In the case of the ethnic minorities living on our northern borders, the Peking expansionists and hegemonists have had many schemes for dividing them from us and for enticing them since many years. Taking advantage of the neighborly relations, of feelings of blood relationship and of cultural ties, they have sent in agents to operate in the mountain villages, even to infiltrate some of our base organizations. In 1978 they put up the antics of "the ethnic Chinese and of the Chinese origin refugees" so as to stimulate the Chinese ethnics and our ethnic minorities to flee into China, causing confusion in the minority areas. In February 1979 they blatantly aggressed with 600,000 troops and occupied all the provinces that are on this side of the China-Vietnam border with the intention of combining attacks from outside with internal rebellions so as to swallow whole our border provinces.

In the face of these new challenges, the solidarity bloc of the majority and minority populations in the whole country, united in fighting to protect our common Fatherland, has upheld the consciousness of one unified nation-state that belongs to the whole Vietnamese national community and its faith in the leadership of the Party and of the Government. This is especially true of the ethnic minorities in the newly liberated South, among whom there were many related by blood and culture with those on the other side of the border.

In the Highlands and in the Cham areas of Thuan Hai, it was nobody other than the Bahnar, Jarai, Ede, Koho, and Chams who linked up closely with the armed forces to run down and eliminate the FULRO, to attack hundreds of their bases in the woods, and to eliminate or capture their commanders and chieftains. They have called for the surrender and confession and rallying of thousands of the FULRO members who have since been dealt with leniently by the revolution. Thanks to this the FULRO forces in the Cham areas of Thuan Hai had in essence been eliminated. As for the Highland FULRO, they have been severely mauled and their leadership is being torn by dissension, sooner or later they will certainly be done away with.

In the Mekong delta, no other than the Khmer compatriots have closely linked up with the revolutionary authorities in order to prevent or suppress the violent agitations, eliminate the first expressions of a reactionary organization, and protect the political security of the localities. When the Pol Pot forces attacked our border provinces, our Khmer compatriots and militia have closely coordinated their actions with the armed forces to fight back to protect the lives and property of the people and to defend the borders of the Fatherland. The Khmer militia of Phu My village in Ha Tien and the Stieng militia of Dac O village in Song Be province gained outstanding victories and subsequently were cited as heroic units by the National Assembly and Government. The Cham woman militia of Chau Doc had defied the taboos of Islam to participate with enthusiasm in the civilian support work to serve the fighting. The plot to stimulate the Khmer compatriots to rise up inside Vietnam to combine actions with the attacking forces from the outside so as to realize the so-called "liberation of the six western provinces" of South Vietnam, that was dreamt up by the Pol Pot clique, was a total failure. That failure led in its wake the complete collapse of the genocidal regime of "Democratic Kampuchea."

In the North, the antics of the "ethnic Chinese and the Chinese-origin refugees" meant to whip up and entice the minorities to go into China also knew an ignominious failure. Those chased away from China by Greater Han expansionism to go and make a living in Vietnam are now citizens of Vietnam. They see all too clearly the "wolf heart" of the South Sea Middle Kingdom, which is why although Mr Teng claims to be "the man of the Yao people," Mr Hua "the man of the Day people" and Mr Li "the man of the Hmong people" nobody was willing to believe their claims and thus they were unable to rally anyone into any sort of "front."

Their "celestial court" dream has failed. The political security of the border has been maintained. Their spies, rangers, and "permanent ambush" forces had been done away with even before the event. The people and armed forces composed of Tay, Nung, Kind, Dao, Hmong, Ha Nhi, Day, etc. had uniformly stood up to fight in solidarity and with extreme courage to protect their villages and territory and to defend the border. Together with the support given by the entire country there have been new "Chi Langs" to reduce to nothing the aggressive plots of the country snatchers.

The great victories achieved in the struggle against the activities plots of the enemies, both old and new, in the last five years, especially the two wars at the two ends of the nation, have proved to be the most eloquent expressions of the unshakable solidarity bloc among all the nationalities in our country. It is clear that through the new challenges the tradition of national solidarity has been honed further and brought one more and firmer step forward.

Secure and Improved Collective Ownership Rights

The Resolution of the Fourth Party Congress clearly states: "We must do in such a way as to make all the nationalities become the collective owners of the socialist Vietnamese fatherland." After the August Revolution the very first constitution of our country had recognized and affirmed the equality and ownership rights of all the nationalities in the unified nation.

The ownership rights of the ethnic minorities as expressed through the state include: the ownership of base organs, the ownership of their localities and the ownership of the entire country. Without owning the entire country it is impossible to own in an integral manner one's locality and base organs. The new constitution of the Socialist Republic of Vietnam confirms: "The socialist state of Vietnam is the unified state of all the nationalities living together on the territory of Vietnam and who stand equal in rights and duties." Also according to the new constitution, in the organizational structure of the National Assembly, which is the organ with the highest authority in the state, there is a Nationalities Council entrusted with the function of studying and proposing laws related to the question of nationalities and of overseeing their implementation so as to guarantee the correct implementation of the Party's and Government's nationalities policy.

Ever since the beginning, through various elections the people of various nationalities have elected outstanding representatives of their own nationalities to participate in the people's committees of various echelons and in the National Assembly. The last Sixth Legislature of the National Assembly saw the representation of 30 different nationalities. The present Seventh Legislature has representatives from 34 different nationalities; this in spite of the fact that of the 52 different minority nationalities present in our country there are only 17 nationalities composed of more than 50,000 people each.

The determining factor in insuring the ownership rights of the minority nationalities has to do with the question of nationalities cadres. The Resolution of the Fourth Party Congress clearly points out that "we must actively train and retrain the cadres of various nationalities in all areas of the Party, Government and mass organization work, and pay attention in the immediate future to the leading and management cadres." The Party and Government directives also stress that there must be trained for each nationality a force of essential cadres who are politically solid and who are good in their specialties, in science and technology.

The work of training and retraining cadres from among the minority nationalities in the last five years has seen new progress. This work has been done through the implementation of many new general lines and concrete policies, especially during the fighting in recent years and through the regular movements for revolutionary action carried out at the base units, which constitute excellent opportunities for retraining the essential cadres and for training a force of new minority nationalities cadres from the points of view of quantity, professionalism and skills level.

In only 5 years the amount of post-secondary and college level scientific and technical cadres has increased by 2.5 times. According to still inadequate data, among the 52 ethnic minorities there are already 32 groups that have cadres of college level with some even in graduate level. A number of nationalities have had a relatively complete force of cadres including leadership cadres, management cadres, and scientific and technical cadres. A few nationalities have had hundreds or even thousands of college-level cadres. The ranks of cadres coming from the Highlands minorities have doubled as compared to the first days of liberation. Comparatively speaking, in 20 years of rule in South Vietnam, the U.S. imperialists and the Saigon puppet government only managed to train a few persons from among the Highlands minorities with college-level education. A full assessment of the great progress achieved in the job of training nationalities cadres in the last five years will make one fully aware of the concern of the Party and Government in the attention given to insuring and upgrading the real collective ownership rights of our minority nationalities in the unified nation.

New Developments in Economic and Cultural Fields

In spite of the fact that fresh out of 30 years of war, our country had to face two wars at two opposite frontiers while undergoing series of natural calamities, and despite our limited resources in building and raw materials, the Party and Government have made many efforts in implementing the nationalities policy on the cultural and economic front.

Right after liberation, half a million compatriots belonging to the various minority nationalities in the South came back to their mountain villages from the various concentration camps and from the strategic hamlets in a situation of extreme privations. Just counting the 3 provinces of the Highlands there were already more than 300,000 people in semistarvation; as for the lack of salt, the lack of clothing or shirts, and diseases the situation was a general one. To resettle these compatriots in their villages, to stabilize their life, to provide food and clothing relief, to give them salt, and to take care of their diseases constituted the number one concern of the Party chapters and of the authorities at every echelon at the time.

On the other hand, the Party Central Committee and the Government have invested in the building of many material and technological bases that are meant to serve production, especially agricultural and forestry production, such as reclamation projects aimed at yielding ricefields, irrigation works, scientific research stations and farms, bases for manufacturing and repairing agricultural implements, and bases for processing agricultural and forestry products. The movement for sedentarization of the life of these people was bolstered with an allocation of funds that was tripled. The state turned over 2,000,000 hectares of forest and forest land for the cooperatives to run and exploit the business. The reforming, building and strengthening of the new production relations has been implemented in all the areas inhabited by the minority nationalities. The ethnic Cham and Khmer peasants who did not have land or did not have enough were distributed land so that they can farm.

In nearly 100 years of rule by the French colonialists and the U.S. imperialists all the 3 provinces of the Highlands, besides the few thousand hectares of coffee, tea, and rubber plantation which for the most part belonged to the foreign capitalists, contained only 800 hectares of flooded fields (compared with a population of about 700,000 people at the time) that were not served by either one single irrigation work or a plant for manufacturing and repairing agricultural implements.

Yet in only the last 5 years, the compatriots of various nationalities in the Highlands have reclaimed 96,000 hectares of cultivation land of which 18,000 hectares are flooded fields, and they have built tens of irrigation works that can now irrigate hundreds and thousands of hectares of field land. This still leaves out the tens of agricultural farms specialized in the cultivation of coffee, tea, and rubber, covering tens of thousands of hectares. In the North, the initiation of the building of the Hoa Binh hydroelectric dam and the rapid expansion of the communication network in the mountain areas, plus the building of new agricultural and forestry collectives combining both economic and national defense objectives, have served and are serving to boost and change the economic picture of the minority nationalities areas.

Benefiting from the concern, assistance and guidance of the state, the compatriots of the minority nationalities continue to promote the strengths of the mountain areas. The production of secondary crops in the last five years has increased in relative proportions and thus has contributed to fundamentally solving the food question of the people and to doing well the duty of contributing food to the state while at the same time supplementing in an effective if partial manner the shortfalls of the delta regions caused by natural calamities, storms and floods. In particular, along the Vietnamese Cordillera and in the Highlands the perennial question of starvation has in principle been eliminated. The industrial plants such as tea, cinnamon, aniseed, tobacco, soy bean and coffee, and medicinal plants, large bamboo varieties, are being developed on a continuous basis so as to form and expand into many specialized culture areas.

From the point of view of public health, culture and education the last five years have also seen many great achievements. In the minority nationalities areas of the North, the basic organizations related to public health, culture and education continue to be strengthened. After the destruction caused by the Chinese aggressors the border provinces of the North have recovered relatively fast. As for the minority nationalities areas of the South, right after liberation the basic organizations and activities related to public health, culture and education were very weak; at the district and base levels there were many cases of total "blank." Yet in only five years we have managed to build a network of public health, cultural and educational organizations from the province down to the district and base levels which is relatively complete. The fight against malaria has been launched and by now many areas have seen a decrease of 70 percent in the incidence of malaria as compared to the days right after liberation. Other social diseases such as syphilis, fungus skin diseases, goiter, and trachoma, have been pushed back. In many districts illiteracy has been eliminated. And the number of students in the schools coming from the ethnic minorities has increased rapidly: for instance, by 3.6 times in the case of Darlac, by 2 times in the Cham areas of Thuan Hai, and by 3 times in the Khmer areas of what used to be Cochinchina.

The policy of linguistic equality among the various nationalities has been supplemented and developed one step forward with the resolution number 53 of the Council of Minister. The national ties with the need to develop a new script or to improve upon an old script are being helped by the local authorities and the scientific research organs of the government.

The fully liberated South--with the Highlands being the cradle of epics told throughout the night, with the areas that run along the Vietnamese Cordillera being the home of justly famous stone orchestras, with the Cham areas being the land of ancient and marvelous towers and sculpture, and with the Khmer areas being the land of originally and subtly carved temples and architectural structures, not to say innumerable other precious cultural artifacts--has opened up to the cultural research work, especially the work of investigating, exploiting and promoting their restoration and preservation, an invaluable treasure of the culture of the various nationalities. In the last five years, this work has seen initial but very encouraging achievements which are so many contributions to the variegated, multicolored and multiperfumed cultural storehouse of our whole nation.

Five years have gone by, and though it is but a short time the new development in the Party's and Government's nationalities policy has made a strong imprint on the social life and on the overall picture of the minority nationalities areas from the North to the South. We will be subjective if next to the achievements we do not see all the shortcomings and weaknesses in the implementation of the nationalities policy on the various political, ideological, economic, cultural, and social fronts so as to make up our mind to overcome them. We will lack awareness if we do not see also that our old and new enemies, especially the reactionaries among the Peking leadership, are still striving to take advantage of our difficulties and shortcomings in our work to sabotage our national solidarity bloc with the aim of weakening and overpowering our people.

We firmly believe that armed with our tradition and promoting the achievements so far accomplished in the last five years, decidedly there will be new transformations in the minority nationalities areas. The compatriots in the minority nationalities areas in the entire country are raising their revolutionary vigilance and are ready to crush all sabotage plots by the enemy, promoting to a high degree their collective ownership rights so as to build up and protect their villages and territory on the road to socialism.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

HANOI PREPARES FOR SECOND PHASE OF MILITARY INDUCTIONS

Hanoi HANOI MOI in Vietnamese 6 Aug 81 p 1

/Article: "City People's Committee Decision on Military Induction for the Second Phase in 1981"/

/Text/ On 5 August, the People's Committee and the Draft Council of the city held a conference to review the implementation of military inductions in the first phase of 1981 and make a decision concerning military inductions in phase two. Attending the conference were the chairmen and military commanders of the 16 precincts, districts and towns.

As a result of concerted leadership, close coordination and well coordinated, correct implementation of the policy concerning the first phase in 1981, the city completed its military induction task well, exceeding the number of inductees required, achieving high quality, complying with policy and meeting the deadline. All wards, districts and cities completed their tasks. Ba Dinh and Hoan Kiem Wards and the districts of Soc Son, Gia Lam, Ba Vi, Hoai Duc and Dan Phuong have begun to gain good experience in quickly, systematically and safely delivering inductees to the army in 1 day, thus completing this work for the entire phase.

The People's Committee and the Draft Council of the city seriously reviewed the shortcomings and weaknesses that exist, such as the lack of accuracy in determining the number of youths eligible for induction and the lack of accuracy in the application of standards and policies when evaluating youths. The effort to propagandize and teach the military obligation and the law is not thorough. A few central and local agency and enterprise party committee echelons do not concern themselves with guiding inductions.

The requirements of the second phase of inductions are:

Rapidly, systematically and safely delivering the full number of inductees, who must be of high quality, to the army in exact accordance with policy and by the deadline.

The scope of the induction is as follows: young men in reserve force number 2 in rural areas, on the streets and in central and local agencies and enterprises and students graduating from middle school or college in 1981.

The standards and policy concerning deferments are the same as those that were in effect for phase one and are based on Council of Ministers' decision 333/CP and Council of Ministers' decision 61/CP.

At the conference, the representatives of the people's committees of Ba Dinh Ward and Soc Son, Phuc Tho, Gia Lam and other districts reported the experiences they gained in guiding inductions in phase one, especially the experience of implementing the "six public statements" and proposed various matters requiring urgent action, such as dealing harshly with cases involving violations of the military obligation, establishing close coordination between the localities and the components at central enterprises and agencies in determining the number of youths eligible for induction and supplementing operating expenses; they also presented a number of requirements regarding materials needed to support military induction in view of the present price situation, regarding receiving inductees rapidly and systematically, supporting inductees well, etc.

The representatives of the people's committees of the wards, districts and sectors expressed determination to carry out military induction in the second phase and for all of 1981 well.

MILITARY AFFAIRS AND PUBLIC SECURITY

ATTEMPT TO FLEE COUNTRY THWARTED, ORGANIZERS IMPRISONED

Hanoi HANOI MOI in Vietnamese 8 Aug 81 p 4

[Article: Organizers of Illegal Emigrees Punished"]

[Text] On 7 August, the City People's Court held a public trial (a trial of the first instance) of persons who enticed and organized others in an attempt to flee the country.

In early February 1980, Le Kim Bang, who is 48 years of age and lives at number 10 Trang Tien Street in Hanoi, went to Haiphong and met with a person to discuss taking his family from the country by sea.

Le Kim Bang's group purchased a boat at a price of 22,000 dong and turned it over to Le Van Bang, Bang's 28 year old son who lives at number 4, Lane 11 in Thi Trung Subward in Dong Da District and who was learning to be a pilot.

Bang also talked with Le Van Long, who is 34 years of age and resides at 61A Duong Thanh Street, and Dang Van Dan, 38 years of age, about persuading a number of persons to contribute money to the attempt to flee the country, including Vo Luan, who resided illegally in Co Nhue Village in Tu Liem District.

On the night of 3 July 1980, they were apprehended while attempting to flee.

The evidence that was confiscated consisted of 1 boat, 30 tanks of oxygen, more than 10 ounces of gold, 1,190 American dollars and much more property. After she was arrested, Tran Thi Binh also secretly sent to her family 2 diamond rings and hid 2 ounces of gold.

Le Kim Bang, Le Van Bang and Vo Luan had prior police records and refused to earn an honest living; together with Do Viet Sung and Dang Van Dan, a cadre and a state worker who had become degenerate and deviant and abandoned their obligations as citizens, they persuaded and encouraged other persons to flee the country with them.

The criminal actions of the defendants had a very adverse impact upon the honor of the fatherland and the nation.

Harshly punishing this gang of persons who persuaded and encouraged others to flee the country and organized an attempt to flee the country, the City People's Court handed down the following sentences:

--Le Kim Bang: 5 years in prison;
--Le Van Long: 3 years in prison;
--Le Van Bang: 12 months in prison (for the crime mentioned above) plus 8 months in prison for the crime of stealing a bicycle;
--Vo Luan: 12 months in prison;
--Dang Van Dan: 12 months in prison, sentence suspended. The property confiscated in this case has been deposited in public funds.

UNPRINCIPLED LEAVES BY MILITARYMEN CRITICIZED

Hanoi QUAN DOI NHAN DAN in Vietnamese 6 Sep 81 p 2

[Article by Nguyen Xuan Hong, P.O. Box 31A-513, Quang Ninh, in "Readers' Letters" column: "Unprincipled Leaves Taken by Militarymen Must Be Prohibited"]

[Text] While on mission, I dropped in at Military Control Station A22 in Quang Ha Town, Quang Ninh Province. After talking with station chief Hoang Huu Tuan and other comrades in the station, I had a clear idea of the daily circulation of armymen and certain units in this area. Most noteworthy is the fact that cadres in a number of units at the battalion and company levels freely allowed their soldiers to take leaves of absence without the approval of the higher echelon. This practice was rampant in Groups B95 and B23.

Many armymen were temporarily detained at the station because their documents were invalid due to the fact that the bearer's name did not coincide with that mentioned in the document, that the validity of the document had expired, that the document bore traces of erasure, that the bearer belonged to some unit but used the document issued by another and so on. Further inquiries revealed that because they failed to submit leave applications to commanders at the regiment or division level, battalion or company commanders allowed their soldiers to take leave under the condition that the latter would secure traveling documents "by themselves." Therefore, these soldiers borrowed documents and made corrections through erasures; moreover, a number of cadres even lent their own documents for the soldiers' use. Almost all soldiers taking leave in such a fashion had to simultaneously solve some problem for their own units. Some of them said they had to buy paper and ink for their companies, others said they had to buy seeds, gifts or food products and so forth. A group of soldiers of Battalion B (Group B23) were granted leave under the condition that on return each of them had to bring along five square colored bricks and deliver them to their battalion (!).

All soldiers using invalid traveling documents were detected and temporarily detained by the comrades at Control Station A22 who subsequently notified the units concerned and advised them to come in to take delivery of their men.

In view of the incidents occurring at Military Control Station A22, we suggest the following measures:

--It is necessary for units B95 and B23 and others stationed in Quang Ninh to closely control grassroots units and to prohibit the granting of unprincipled leaves to militarymen contrary to army regulations.

--Military control teams must intensively control the militarymen's circulation within the fixed areas, to promptly detect and correct militarymen acting against orders and regulations and to simultaneously detect persons impersonating armymen and using fake documents to carry out illegal activities.

DAYTIME SHOOT OUT IN HANOI, BANDITS ARRESTED

Hanoi HANOI MOI in Vietnamese 30 Jul 81 p 4

[Article by Tran Manh Tuan: "Valiantly Arresting Violent Thugs"]

[Text] On 27 July 1981, at 0800 hours, Sergeant Pham Van Thanh passing through the Sai Dong area while on official duties suddenly heard cries for help, "Pirates! Pirates!" followed by gunshots. At that moment, members of the militia and armed forces stationed nearby were pursuing the bandits. But, since they were armed and determined to return the fire, inexperienced pursuers dared not approach them. The two bicycle-riding bandits threatened, "If you chase us, we'll shoot and kill you!"

Sergeant Thanh assessed the situation and devised plans for nabbing the criminals. As his two-wheeled Honda picked up speed in the direction of the bandits, he met Corporal Nguyen Trong Bai. The latter, who also was on official duties in the district, promptly ran to a militia post and borrowed a weapon for the fight. Pham Van Thanh drove the Honda with Nguyen Trong Bai sitting behind him. As Thanh and Bai drew close, the stubborn bandits continuously fired at them. Taking advantage of the presence of a motor car in front of them, Thanh prepared to overpass the bandits, but the latter abandoned their bicycles, jumped onto the roadside, and hiding themselves behind bushes and remnants of brick walls they returned the fire. The bandits hit the Honda front tire with a bullet, disabling the two-wheeler on the spot. Thanh's left leg also received two slugs. Nevertheless, Nguyen Trong Bai promptly jumped over a high wall into an advantageous position from which he stood ready to shoot at the pirates' legs. He shouted an order, "Drop your weapons! Surrender at once!"

At that moment, members of the militia and armed forces in the vicinity stormed into the place, helping Thanh and Bai nab the violent bandits, who earlier went into a family home in Sai Dong to force a cupboard open to seize a radio set, and used weapons to threaten children and resist public security agents. Like other public security units, the one in Gia Lam District has launched a movement to study the example of "serving the People" set by the late hero Nguyen Tai Hai. The valiant action of the two police combatants, Nguyen Trong Bai and Pham Van Thanh--arresting the bandits and protecting the people's properties--illustrated the initial results of this emulation drive.

VALUABLE MACHINERY STRIPPED BY THIEVES

Hanoi HANOI MOI in Vietnamese 6 Aug 81 pp 1, 4

[Article: "Harsh Punishment Meted Out to Persons Who Stripped Machinery and Stole Parts"]

[Text] In 1979, the Dong Xuan Knitting Mill received a number of modern looms. According to the economic contract, the Machine Installation Enterprise of the Hanoi Building Service was responsible for delivering this equipment to the site and installing it. Knowing that the equipment contained many valuable parts, Tran Dinh Bich, Pham Duy Xa, Vu Truong Tho and Duong Van Thanh (all of whom were workers at this enterprise), taking advantage of the noon day break, sneaked into the place where the machinery was being stored and stripped it of parts. They worked in two groups, one group going into the building to strip the equipment while the other stood guard outside.

They stripped four modern, recently delivered looms worth nearly 200,000 dong apiece and another loom worth nearly 100,000 dong. The smashed the mica covers, used knives to cut electrical cords, smashed lightbulbs and so forth in order to steal the following parts: control boards, thread guides, fans, florescent lights, indicator lights, gauges to count revolutions and so forth. They took and sold 72 202 bearings for 1,000 dong, which they spent on themselves.

The property that was reclaimed at the houses of the defendants was insignificant and of virtually no help in rebuilding these looms. Of the looms that were stripped, it will be difficult to restore four to operation because the parts must be purchased using foreign currency.

On 5 August 1981, after holding a public trial (a trial of the first instance), the city's People's Court handed down the following sentences:

--Tran Dinh Dich, who was born in 1962 and resides in Dinh Cong Village in Thanh Tri, was sentenced to 18 years in prison;

--Pham Duy Xa, who was born in 1963 and resides in Area 9, Tuong Mai Subward, Hai Ba Trung Ward, was sentenced to 10 years in prison;

--Duong Van Thanh, who was born in 1954 and resides in Hoang Van Thu Village in Thanh Tri, was sentenced to 6 years in prison;

--Vu Truong Tho, who was born in 1952 and resides at number 46 Hoang Hoa Tham Street in Ba Dinh Ward, was sentenced to 5 years in prison.

These four persons must pay damages to the Dong Xuan Knitting Mill totalling 38,961 dong.

Pham Thi Nga, who was born in 1946 and resides at E4 in the Kim Lien collective housing area in Dong Da Ward and was convicted of the crime of receiving stolen socialist property, was given an 18 month suspended sentence.

PUBLIC ASKED TO HELP STOP IMPROPER USE OF LOUDSPEAKERS

Hanoi HANOI MOI in Vietnamese 15 Aug 81 p 4

[Article by Nguyen Van Nhuong, the acting director of the Wired Radio Utilization and Management Enterprise: "Stopping the Improper Use of Loudspeakers"]

[Text] Our city has constructed a widespread loudspeaker system in and outside the city. This means of mass communication has helped to improve the cultural life of the residents of Hanoi. Recently, however, the wired radio system has not been operating normally and this has adversely affected the effort by compatriots to listen to news, music and literature.

Besides the reasons that lie in the poor management being provided by the enterprise and difficulties with materials and technology that have not been corrected, there is one other very widespread reason that is constantly the cause of accidents along the wired radio lines: many people are still using loudspeakers in a technically incorrect manner. They have dismantled transformers and hooked loudspeakers directly into wired radio lines, using loudspeakers of high capacity on wired radio lines without transformers. This improper action of theirs causes numerous other loudspeakers to not work at all or to only emit a very low sound; only their loudspeaker is loud. They usually hook up their loudspeakers in this manner during the hours that the most people are listening to the wired radio system. Workers of our enterprise have had to work in the evenings and at night to uncover violations of the regulations governing the use of loudspeakers. During the first 6 months of 1981, there were 34 such violations. During the first 20 days of July 1981, we filed reports on 24 violations, included among which were violations by collective areas of state agencies, enterprises, cooperatives, etc. Many of the individuals and collectives involved in these violations have no understanding of technology and gave no thought to how their incorrect use of loudspeakers would harm the interests of many other listeners. However, there are also persons who only want their loudspeaker to be loud and who intentionally violate regulations even though they know that they are infringing upon the rights of other listeners. On 28 January 1980, the Hanoi City People's Committee issued document 389 QV-BDUB, which set forth regulations on the management and protection of the information and communication lines within Hanoi. These information and communication lines include wired radio lines. These regulations state: "...Wired radio lines are under the exclusive management of the state; the mass organizations, people, units of the armed forces, enterprises, worksites, schools, local governments, various echelons and each citizen must protect their safety and insure that transmissions over information and communication lines are not interrupted." For the common interests of all listeners of wired radio, we suggest that compatriots use loudspeakers in accordance with the regulations stipulated in loudspeaker use contracts and remind everyone else to do the same. When workers from our enterprise arrive to repair breaks in loudspeaker lines, it is hoped that compatriots will help them by telling them who hooked up loudspeakers incorrectly or who took it upon themselves to hook headsets or radios into wired radio lines. The identities of the persons who make such information known will be kept secret.

NAM DINH CRACKS DOWN ON ILLEGAL SALES

Hanoi HANOI MOI in Vietnamese 11 Aug 81 p 4

[Article: "Forty-Three Thousand Fines Handed Out to Small Merchants for Selling Products at Incorrect Prices and Violating Business Regulations"]

[Excerpt] In Nam Dinh City, Ninh Binh City and Ha Nam City, the finance sector has coordinated with the public security and commerce sectors to establish 50 work teams that routinely conduct inspections and supervise the implementation of industrial and commercial policies in the major markets and along the streets. In the past 2 months, these work teams have conducted inspections of and handed out 43,000 fines to small merchants for selling goods at incorrect prices and doing business in products that are under the exclusive management of the state; in the process, they reclaimed 24 ice cream making machines and stopped 6 households from illegally producing bicycle tires.

THEFT OF BUILDING MATERIALS CONTINUES

Hanoi HANOI MOI in Vietnamese 7 Aug 81 p 3

/Article by "Tho Xay"(The Builder): "Not Much of a Reduction"/

/Text/ Over the past 2 years, in keeping with directive number 31 of the Standing Committee of the City Party Committee on combating negative phenomena, the various building corporations have made definite efforts to stop the theft of materials belonging to the state. These corporations have taken prompt action in hundreds of cases, action ranging from prosecution under the law and the firing of workers to demotions, warnings, requiring payment of damages and so forth. Facts have shown that losses have declined at every unit that has taken strong, serious and regular measures. However, for the sector as a whole, the reduction of losses has not been much.

At present, there are more than 100 large and small building corporations scattered throughout the city and its outskirts. Cases involving the loss of building materials occur virtually every week and every month. At one place, five cases involving the loss of cement occurred in 6 months. There was one case that involved the loss of a few thousand bricks (an entire truckload), a few pre-fabricated door frames, paving bricks, enameled bricks, iron, steel and so forth. This is not to mention the cases involving the loss of ceiling fans and construction machine parts. The perpetrators of these thefts of building materials are, for the most part, security personnel, warehouse custodians, drivers and escort personnel who conspire with one another. Is this not a loophole that the building corporations have not taken steps to close?

SUPPLEMENTARY TRAINING OF KEY VILLAGE CADRES DISCUSSED

Hanoi NHAN DAN in Vietnamese 16 Sep 81 p 3

[Article by Vu Oanh: "Party Building: Supplementary Training of Key Cadres in the Villages"]

[Text] Resolution No 32 of the Council of Ministers regarding the organisational task stated that "We must pay attention to both the systematic training of cadres in regular classes and short-term on-the-job supplementation." The Secretariat of the Party Central Committee issued Circular No 125, date 30 June 1981, which stated that every year the key cadres in the villages must be given supplementary training so that they can "fully understand the new resolutions and directives of the Central Committee and know how to apply them and organise their implementation." At the same time, we must gradually improve working methods at the base level. Between now and the fourth quarter of 1981, the provincial, municipal, and district party committees must carry out the suplementary training of seven types of key village cadres so that they can understand know how to implement the principal matters in accordance with the program prepared by the departments of the Party Central Committee."

In order to profoundly understand and do a good job of implementing the resolutions of the Council of Ministers and the circular of the Secretariat, we would like to discuss a nurber of problems related to the contents of the supplementary training of cadres during the present cycle, so that you can further study them. This is the first time we have discussed supplementary training in a brief article.

At present, there are 8,500 villages in our country and there are 83,000 members of village executive committees. More than 70 percent of the key cadres have worked in the villages 5 to 10 years or more, and in some cases 15 to 20 years. More than 50 percent have completed base-level programs; more than 40 percent have completed elementary and mid-level programs; and fewer than 10 percent of the party committee members have not yet studied in party schools. Some 48.6 percent of the village party committee secretaries have attended elementary and mid-level theory programs, and 3.8 percent have studied middle-school technical agricultural curricula. In view of such numbers and levels of the base-level cadres in the villages, we must think about how to train them in order to achieve the desired results and assure the stipulated time. The actual situation demonstrates that discussions, notwithstanding, in the end it is still the base-level cadres who determine the implementation, and in the course of revolutionary work the base-level cadres mature, with one class succeeding another in victoriously carrying out the lines and policies of the party.

We may affirm that the base-level cadres are, generally speaking, good, loyal to the party, and delicated to the people, and have experienced many arduous challenges. Everyone knows that the work of the base-level cadres is like "a hundred mulberry leaves dumped on a silkworm," that they have to handle everything, from family problems to the problems of society. Many base-level cadres manifest a strong revolutionary will, work enthusiastically, seek ways to overcome difficulties, and fulfill their missions. However, some people who do not yet have a firm revolutionary foundation have a weakened will to fight and have committed mistakes with regard to revolutionary qualities and ethics.

The base-level cadres, especially in the rural areas, could not have matured if the provincial and district party committees had not recently been concerned with training them in a system of party schools and by means of many other forms, such as on-the-job training and organizing visits to advanced models in the province and outside the province.

However, the supplementary training of cadres during the recent period has failed to fully explain the lines and policies of the party and has not entered deeply into the specific work of building socialism in the villages and hamlets; the problems of economic and social management; the relationships of the party leading, the people leading, and the state managing; and the authority and responsibility of the party committee secretaries, village chairmen, cooperative directors, etc., about which the base-level cadres are confused and which they do not clearly understand and do not know how to do.

The supplementary training of cadres during the recent period has failed to fully explain the lines and policies of the party and has not entered deeply into the specific work of building socialism in the villages and hamlets; the problems of economic and social management; the relationships of the party leading, the people mastering and the state managing; and the authority and responsibility of the party committee secretaries, village chairmen, cooperative directors, etc., about which the base-level cadres are confused and which they do not clearly understand and do not know how to do.

The supplementary training of base-level cadres is intended to improve their leadership ability, fighting spirit, and initiative and creativity in work. Therefore, it is necessary to train them with regard to the new viewpoints in the directives and resolutions of the Central Committee, pay attention to improving their economic and social leadership and management ability, know how to exploit the latent capabilities of labor, land, and natural resources in each village, promote production, build material-technical bases, perfect the socialist production relationships in the rural areas of the north, and create production collectives and cooperatives in the south positively and solidly. At the same time, we must train the base-level cadres so that they can clearly understand the plots of the Beijing reactionaries and the imperialists, and heighten their awareness of vigilance, of strengthening national defense, and of maintaining political security and social order.

On the basis of supplementary training regarding the directions and tasks, we must enter deeply into the specific tasks and progress of each village. Attention must be paid to training all cadres so that they can understand how to grasp and correctly evaluate the situation, and set objectives and adopt measures that are appropriate to each locality. We must clarify the functions, tasks, and working methods of each type of key cadre in the villages, avoiding doing their work for them while also avoiding the relaxation of the party's leadership.

While improving the cadres' knowledge and ability so that they can fulfill the immediate missions, we do not regard lightly the task of teaching Marxist-Leninist theory in party schools at the various levels and the task of scientific-technical and specialized professional training conducted by the sectors.

An important matter in supplementary training is that in selecting cadres to study we cannot be concerned only with numbers but must also meet standards regarding quality and ability. We must select and positively train cadres who are faithful to the lines of the party, who have pure political qualities, are enthusiastic toward their work, dare to think and do, are not corrupt or abuse their authority, do not carouse, and have the confidence of the masses. If a key cadre does not fully meet those conditions, the district party committee must guide the base level in selecting a replacement, and then training the unqualified cadre or select a successor to undergo training before replacing the unqualified cadre. In replacing key village cadres, the masses must contribute opinions, the party organization must make the decision, and the district must approve the decision, in accordance with he stipulated principles and procedures.

Seven or eight key village cadres should be sent for supplementary training at the same time, in order to be comprehensive, systematic, and complete, while at the same time rapidly developing the results of the supplementary training. Although each sphere and sector has a different nature and different characteristics, when in operation they coordinate closely, affect one another, and are unified under the guidance of the party committee echelons. Therefore, it is necessary to teach viewpoints comprehensively and completely, and overcome the one-sided situation of a sector only knowing about that sector, which influences the results of the common endeavor. Because it trained the cadres occupying all seven key positions in the villages at the same time, Tay Ninh Province was able to uniformly improve their abilities and brought about real results.

The supplementary training of all village cadres cannot be entrusted exelusively to the district. There must be cooperation between the provinces and the districts and the provincial and district departments and sectors, under the guidance of the provincial and municipal party committees. Only then can high quality be attained.

A number of provinces and municipalities are urgently implementing the circular of the secretariat. The standing committees of the party committees of Thai Binh, Ha Nam Ninh, and Hai Hung provinces, and the Hai Phong party committee are, along with the districts, discussing plans to hold classes to train instructors and quickly organize classes, with a spirit of preparing for the congress of party organizations at the various levels.

ECONOMIC PLANNING, TRADE AND FINANCE

ECONOMIC COOPERATION BETWEEN CITY, PROVINCES TO BE DEVELOPED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 4 Aug 81 p 2

[Article by Kim Vy: "Economic Cooperation Between the City and the Mekong Delta Provinces"]

[Text] A planned economy has been built on the basis of the general guidelines indicated by the central level. Realities have demonstrated that economic cooperation between the provinces and the city [henceforth, of Ho Chi Minh] is an essential requirement not only for each locality but also for the entire region and country.

Based on the above mentioned concept in trying to fulfill the norms of the central level's plan, Ho Chi Minh City and the Mekong Delta provinces have taken the initiative in holding meetings and debates, in creating the relationships of two-way exchange of goods, in sharing products and in establishing brotherhood among various precincts and districts. In the first step, the provinces and city have obtained a number of positive experiences and results from their cooperation in doing business.

Encouraging Results

As an industrial center of the entire country, what has Ho Chi Minh City done to support the Mekong Delta provinces? This is a question to be pondered by the industrial, and small industry and handicraft sector in the city.

During our fact-finding tour to the Mekong Delta provinces, we were glad to see that both the commodities and industrial production forces of the city had reached the delta districts and cities. Since 1978, with the agreement of the [Ho Chi Minh] Municipal People's Committee and the provincial people's committees, economic cooperation has been established between many precincts [of Ho Chi Minh City] and [provincial] districts. In Cuu Long Province, Cau Ngang District has pledged brotherhood with the First Precinct, Vung Liem District with Tan Binh [District, Ho Chi Minh City] and Cang Long [District] with Binh Thanh [District, Ho Chi Minh City]. In Hau Giang Province, O Mon District has pledged brotherhood with the Third Precinct and Phung Hiep District with the Sixth Precinct. A number of state enterprises in the city have made known their production capabilities and new types of commodities to the provinces and have signed many contracts with the latter.

On the basis of a two-way exchange of goods, the [provincial] districts have supplied food to the city which has, in turn, helped them install machines, process agricultural products, repair farming and fishing machines and equipment and provide vocational training.

In Vung Liem District, Tan Binh District [Ho Chi Minh City] has installed a coconut oil press factory with a daily capacity of 3 tons. The Sinco Sewing Machine Enterprise [Ho Chi Minh City] has helped [Vung Liem District] equip a sugarcane press factory with a daily capacity of 2 tons. The Tan Mai Paper Enterprise [Ho Chi Minh City] has provided Vung Liem District with the equipment to transform straw and thatch into paper pulp with a yearly capacity of 1,000 tons. In Tra Vinh City, the [Ho Chi Minh] Municipal Joint Fodder Enterprise has installed a fodder factory. In O Mon District, the Truong Son Cooperative has installed a paper production and paper pulp processing line with a yearly capacity of 300 tons and trained 60 skillful workers for the paper enterprise in the district.

As far as the corporations specialized in grain and agricultural products dealings are concerned, the relationships between the city and the provinces have become closer and obviously effective from the economic point of view. In 1978 and 1979 when the city was faced with great difficulties in grain and food, the Mekong Delta provinces suppled grain to the city according to the norms assigned by the state and even sold grain to the city at the agreed price. Since the beginning of 1980, the Grain Dealing Corporation of the city has broadened its business scope, developed its role, applied new buying prices, carried exchange goods to the provinces and has thus been able to buy a large volume of grain for the state and to partly meet the peasants' needs for industrial goods.

The Cuu Long, Hau Giang, An Giang and Minh Hai Agricultural Products Corporations have signed contracts with the Level-1 Food Corporation [Ho Chi Minh City] while consumer cooperatives [in these provinces] have supplied meat on the hoof, sugarcanes and millions of duck eggs [to Ho Chi Minh City].

The Import-Export Corporation of Hau Giang Province has exported a number of choice agricultural products through the medium of the Import-Export Corporation in the city. All that represents the good effects of the initial phase [of cooperation between the city and the provinces].

During our meeting with Ms Le Thi Sang, director of the Cuu Long Agricultural and Food Products, she told us: "Following a bumper rice and sugarcane harvest, the agricultural products of Cuu Long are abundant. The new price policy has stimulated peasants to intensify production. Pork, eggs, sugar and shrimp anf fish sauces are the goods which our province wants Ho Chi Minh City to consume."

Ms Sang then showed us the warehouse. The stock of sugar made from sugarcanes reached the roof of the warehouse and there still was not enough room to store it though the conference hall, office buildings and even the people's houses had been fully used for storage. There were more duck eggs than the corporation could buy in though its puchasing capacity had risen to 300,000 eggs and 20 tons of live-weight pork a day.

A similar situation was mentioned by leading comrades in various departments and sectors in Hau Giang. It is clear that while agricultural products are plentiful in the provinces, they are in short supply in the city and also in the eastern and central provinces. This is a reason for price fluctuations on the market.

It is obvious that economic cooperation between the city and the provinces has become an urgent requirement of production and life.

Some Shortcoming Requiring Solution

Apart from the abovementioned results from the development of effective brotherhood between [municipal] precincts and [provincial] districts, we have found out that cooperation has been patchy and has not yet really involved careful consideration of long-term economic effects.

Some municipal precincts have sent their agents to the brotherly provincial districts to strike only a few bargains. A number of municipal precincts and provincial districts have jointly invested capital but have not fully implemented their cooperation plans because of their failure to make specific calculations and to base these plans on realistic conditions. In April, the Cuu Long Agricultural and Food Products Corporation experienced heavy losses in the egg dealings because the two parties failed to reach an agreement on the prices indicated in the goods purchasing contract with the province, because of slow information and communications and because the transportation contracts made were not uniform.

A leading comrade in Vung Liem District [Cuu Long Province] told us: "On the occasion of each holiday and Tet, countless trucks and small cars come from Ho Chi Minh City to the provincial districts."

The fact that the amount of goods exchanged between the provinces and the city has increased is encouraging from the point of view of distribution and circulation. But further inquiries have revealed that a spontaneous, scattered and free business method is developing. Instead of submitting to the provincial committees' management, a number of units such as consumer cooperatives in subwards and precincts and even enterprises [in Ho Chi Minh City] have gone directly to villages and hamlets in the Mekong Delta to purchase agricultural products. On the part of the provinces, certain sectors which have come to the city to sign contracts for goods purchase or machine installation have shown a tendency to deal only with private concerns or with some negativistic elements which are prone to evade the municipal management and to do business separately. The relationships of cooperation among various sectors and between a municipal precinct and a provincial district have been subjected merely to a periodic guidance and have neither involved any long-term plan nor been followed up and urged on for the purposes of proper implementation. Though the state has issued regulations and entrusted various sectors, levels and localities with the management of a number of goods, this management is still being exercised unilaterally for convenience's sake. This is the reason for the abovementioned practices--not to speak of the fact that certain collectivized installations [in Ho Chi Minh City] have gone to provincial districts to install machines without setting rational prices, without using good-quality materials and without displaying a high sense of responsibility. After drawing a few experiences from the cooperation relationships between Cuu Long Province and the city, we have found that the city and the provinces must further strengthen leadership and overall management. Specifically speaking, any action to be taken by virtue of a contract between various sectors, between a province and the city and between a municipal precinct and a provincial district or between state and collectivized installations and enterprises must be subjected to the management of the local administration at all levels. It is necessary to establish long-term contracts, to apply the system of reward, penalty and indemnity in the execution of contracts and to consider any bipartite contract to be legally compulsory so as to ensure proper implementation.

Some New Measures

Under the guidance of the Municipal Party Committee and People's Committee, the grain dealing sector and the commercial sector in the city have recently gone to some Mekong Delta provinces to establish a system of goods exchange.

The provinces will bring agricultural and food products to the city by consigning them [to installations in the city] or by opening their own shops in the municipal precincts or key markets. This task must be urgently done by the provinces to help the city increase the sources of goods and stabilize the market.

With regard to the relationships of cooperation in agro-industrial development, the Mekong Delta provinces possess plenty of industrial crops such as soybeans and kenaf. To fully develop and exploit this source of raw materials, the enterprises [in the city] have cooperated and shared the products with the provinces instead of applying the former system of buying and selling without redemption. The Kenaf and Woolen Carpets Joint Enterprise [in Ho Chi Minh City] has established cooperation with Long An and An Giang and its share of products with these provinces has increased by 20 percent as compared with the past.

The leading comrades in Cuu Long Province have made their specific needs known to the municipal industrial sector. Can Ho Chi Minh City install a machine works or a repair station in a few years according to a long-term investment plan?

Ho Chi Minh City has been able to produce pig sties and prefabricated housings which are in great demand by the provinces. The city must meet their need.

On the other hand, the question of providing economic information and advertising the goods needed by the peasantry must also be raised.

Above are some measures which must be taken immediately to intensify and develop the relationships of long-term cooperation.

ECONOMIC PLANNING, TRADE AND FINANCE

HOAN KIEM PRECINCT STRENGTHENS MARKET MANAGEMENT

Hanoi HANOI MOI in Vietnamese 4 Aug 81 p 1

[Article: "Carrying Out Directive 109, Hoan Kiem Precinct Adds More than 1 Million Dong to Budget, Discovers More than 90 Instances of Speculation, Smuggling"]

[Text] In the past 2 months, fighting speculation and smuggling the entire precinct has discovered 91 violations (including many major ones), confiscating tons of goods of various kinds totalling 2 million dong. Owing to continued, concentrated and many-sided activities, and in coordination with many sectors, the precinct has contributed decisively to stabilizing market prices.

The precinct also inaugurated a store for consignment handicraft goods at 63 Cua Nam Street. In more than 1 month, the store has signed contracts with more than 40 installations and nearly 60 individuals totalling 6 million dong. Contracts totalling nearly 100,000 dong have been fulfilled. In the days to come, market management work in wards will take another step forward. Wards, administrative bureaus and management boards at individual markets will continuously control and supervise price posting and compliance with regulations on production and business registration. The precinct will also step up building and consolidating the marketing cooperative network in wards, regarding it as a force to support state commerce in its struggle to stabilize prices, and consequently contribute to stabilizing the existence of workers, civil servants and the people. Hoan Kiem Precinct has just assessed the preliminary results of 2 months carrying out Directive 109 of the (VCP Central Committee) Political Bureau.

Although the task assigned was not on the books, the precinct has, in just 3 to 4 days, carried out the inventory of supplies and goods at 8,000 production and business households, and a drive to enforce price posting at all major precinct markets and in 6,221 service-providing households (out of a total of 8,375 ones).

In the past 2 months, the precinct has prosecuted 11,444 violations of regulations on production and business registration, and on prices, and has levied fines totalling 322,924 dong. In June, the financial bureau has collected back taxes, additional taxes based on real business income, and other taxes totalling 1,265,000 dong.

ECONOMIC PLANNING, TRADE AND FINANCE

ACTIVITIES OF MARKETING CO-OPS DESCRIBED

Hanoi HANOI MOI in Vietnamese 8 Aug 81 p 3

/Article by Tran Thanh: "Subward Marketing Cooperatives Support the Two Main Meals of the People"/

/Text/ The Kim Ma Subward Marketing Cooperative was established on 15 March 1981 with 300 cooperative members (of the 11,000 persons in the 3,600 households of the subward), 1,046 shares and 5,230 dong in capital. Now, the number of cooperative members has risen to 442 and the cooperative has 1,379 shares and 6,895 dong in capital. This rate of growth is considered slow.

Although its capabilities are limited, the cooperative has managed to perform a number of beneficial jobs: purchasing fish sauce, "maggi" sauce, soap and sugar for sale to cooperative members at prices lower than market prices. The cooperative has given thought to serving two main meals, but, to achieve this objective, it must still overcome difficulties in many areas: manpower, skills, sales points and so forth. One area in which the cooperative has succeeded is obtaining bread for the people.

There are three different prices based on the amount of bread purchased each month: from 7 to 10 kilograms of bread, 0.15 dong per kilogram; from 4 to 6 kilograms per month, 0.20 dong per kilogram; and less than 3 kilograms per month, 0.25 dong per kilogram.

In April, the cooperative obtained 3,234 loaves of bread for 130 households. In May, it obtained 13,660 loaves for 548 households. In June, it obtained 19,645 loaves for 792 households. The cooperative has adopted a plan for providing a regular and fair supply of bread so that everyone receives grade 1 and grade 2 bread in order of arrival. Consumers, after several months of receiving bread at their homes, have stated that the service is very convenient. They no longer have to waste time going to the store many times and waiting for a long time.

Buying Goods To Sell at Low Prices

Continuing to purchase goods to sell at low prices to cooperative members, the Hang Dao Subward Marketing Cooperative has now purchased for each person 1 bag of wheat at a price of 5.4 dong (the normal price in state-operated food and beverage stores is 8 dong). And, as was the case with the sale of sugar and peanut candy, the wheat is being delivered to homes, that is, being taken by cooperative personnel to cooperative members and sold to them at their homes.

Recently, the cooperative conducted a trial in purchasing hogs for slaughter but did not achieve good results due to many reasons, the most significant one being the lack of the necessary occupational skills. The head of the management committee said: "We suffered a small loss of no significance; of significance is the fact that we gained valuable experiences so that we can do this again better and more effectively." The Hang Dao Subward Marketing Cooperative, which was established on 15 June 1981 and officially went into operation on 1 July, has 126 members (the entire subward has 1,700 households) and pooled capital amounting to 15,000 dong. In 1 month of operation, the cooperative did 100,000 dong worth of business and earned a profit of more than 8,000 dong.

The cooperative has adopted a plan for providing, between now and the end of the year, the residents of the subward with 2 to 4 kilograms of fresh fruit and vegetables and 1 to 2 kilograms of pork per month and will also provide them with "maggi" and fish sauce.

Processing Goods with Which To Serve the People

The Giap Bat Subward Marketing Cooperative is fulfilling its role. After processing fish sauce for sale to its members, the cooperative has processed "maggi" from soybeans and then made bean curd. Concerning this bean curd, the members of the management committee take pride in the fact that it is "similar to Mo beans in quality but much cheaper."

The cooperative, however, is not operating on a large scale, only a medium scale, because it is in the initial stage and still gaining experience. Soon, the cooperative will expand its processing not only for its own subward, but also for supply to the three neighboring subwards of Tuong Mai, Truong Dinh and Dong Tam. The cooperative will build a plant to regularly produce three products: fish sauce, "maggi" and bean curd; in addition, it will also produce livestock feed. The cooperative has been equipped by an enterprise constructed within the subward with a grinding machine. The ingredients of the livestock feed will be obtained in a district in the outskirts of the city on the basis of a product exchange between the district and the cooperative. The livestock feed will be provided to the subward and neighboring subwards. Through the supplying of livestock feed, the cooperative will be able to purchase hogs as an agent for the state and, at the same time, purchase hogs for slaughter to serve the people of the subward. The cooperative has been given a pond in which to raise fish. The operations of the Giap Bat Marketing Cooperative are diverse; they include purchasing goods for sale, processing products in order to have goods, serving boiled water, cooked rice, breakfasts and so forth. The cooperative earns about 600 dong per day from selling cooked rice and food to the workers of the Giap Bat Railroad Station.

The Giap Bat Marketing Cooperative went into operation on 1 April 1981. It started with 50 members and 50 shares. As of the end of July, it had 327 members, 918 shares and 12,000 dong in capital. These figures reflect smooth development.

USE OF METAL HOOKS TO STEAL FOOD REPORTED

Hanoi HANOI MOI in Vietnamese 31 Jul 81 p 4

[Article: "A Story a Day Column by The Builder: A Hook That Slits Sacks Open"]

[Text] Grain stores regularly receive rice and noodle shipments from afar. It is regrettable that when these shipments arrive at shorehouses a number of sacks, even brand new ones, are found broken. Punctured sacks cause considerable loss of goods.

Why is it that new sacks are broken? The answer is that the loader thrusts an iron hook into them. At first, the hole is small, but it widens gradually as the loader puts the sack on his back and carries it, thus allowing a steady outflow of rice or noodle. And women and children run behind picking it up. Some people have "earned" hundreds of dong a day that way. A thing deserving mention --these "pickers" often are the wives, children or relatives of the longshoremen. Rice and noodle are being strewn not only at railroad stations and harbors... but also on transportation trucks. Drivers and assistants also "pick up" a lot during each trip. It is hoped that along with educating the people about the spirit of protecting socialist properties, we must strictly prosecute those using hooks to steal rice and noodle, so that rice sacks will no longer be broken and unhealthy phenomena surrounding the "hook" story will be terminated.

BA DINH PRECINCT STRENGTHENS MARKET MANAGEMENT

Hanoi HANOI MOI in Vietnamese 29 Jul 81 p 1

[Article: "Carrying Out Directive 109, Ba Dinh Precinct Has Many Synchronized Measures in Market Management Work"]

[Text] In July, Ba Dinh Precinct continued to strengthen market management work.

The precinct has concentrated on controlling compliance with business registration procedures and with price posting, as well as on fighting speculation, smuggling and price raising practices. Since the beginning of the month, the precinct has fined 306 households for violating business registration procedures, and 573 households for not posting prices and for selling at wrong prices and dealt with 76 cases of contraband and speculation; and has also discovered and caught a number of thefts of socialist properties for resale on the market, including those involving 10,000 meters of television antenna wire and the conspiracy with truck drivers to steal gasoline, oil, etc.

During the same period, the precinct financial bureau collected 16,585 dong in outstanding taxes and 30,000 dong in additional taxes from 58 households. Based on initial inspection data, the bureau has reassessed the business income levels of 53 households dealing in handicraft products and color papers production. Follow-up control showed that the current business capital of 29 households selling general merchandise has increased by 34,650 dong, and that their earned business income was higher than their estimated one by 48,200 dong. The business capital of 24 households involved in paper production and trade has increased by 29,950 dong while their business income has increased by 30,380 dong. Following control the bureau has reassessed the tax levels of these 53 business households.

At the moment, the precinct people's committee is supervising wards to expand the network of activities of marketing cooperatives so as to care for the people's two daily meals. It also is getting ready to level off a site in Giang Vo to build a market.

MANAGEMENT OF LOCAL MARKET STILL WEAK DESPITE IMPROVEMENTS

Hanoi HANOI MOI in Vietnamese 8 Aug 81 p 3

[Article: "Market Management in Me Linh District"]

[Text] In keeping with Political Bureau directive 109, market management in Me Linh District has been improved and begun to achieve a number of results.

Me Linh District, which has a population of 180,000, has two towns, Phuc Yen and Xuan Hoa. The town of Phuc Yen has many railroad stations, bus terminals and a main market that is open every other day. In addition to the towns of Phuc Yen and Xuan Hoa, Me Linh District also has dozens of large markets in the villages of Thach Da, Me Linh, Tien Phong, Quang Minh and so forth, which are as crowded and have as many goods as the Phuc Yen market.

On the basis of the above mentioned characteristics, the question facing the district was how to organize market management. The first step taken by the district was to reinspect small merchants and the persons who worked in the service trades throughout the district; it then educated and registered them for business licenses. The district approved and issued commercial business licenses to 380 households, food and beverage licenses to 382 households and service licenses to 332 households. The district established mobile market management units which, together with the management committees of the various markets, inspect the posting of prices and insure that goods are sold by private merchants at the prices that are posted.

In the past 2 months, the market management units have issued 317 fines for violations of business registration regulations, issued 8,240 dong worth of fines for the sale of goods at incorrect prices and requested the dismantling of 90 stands that had been illegally erected and were taking up the sidewalk from Thach Lam Village to the town of Phuc Yen. Also in the inspection, the market management units made arrests and confiscated merchandise in many cases involving the illegal transportation of goods, the sale of products under the exclusive management of the state, such as cigarettes, coal, chemically refined sugar and so forth. Since the start of June, as a result of maintaining regular market management, the prices of goods on the Me Linh market have, generally speaking, been stable. The prices of rice, meat and fish fluctuate about 1 to 2 dong from one market session to the next.

Besides the accomplishments that have been recorded, market management in Me Linh District is still marked by certain weaknesses. At the various markets, merchants only post the prices of their products to comply with regulations when cadres are conducting inspections. After the inspection, products are sold at "quoted" prices. At some markets, management committees conduct cursory inspections and operate in a form for form's sake manner, consequently, they do not expose or make arrests in cases involving private merchants selling products at incorrect prices. The practice of customers being shorted by small merchants is rather widespread but market management units do not give their attention to conducting inspections in this area, as a result of which customers complain at great length. At the Phuc Yen market, there are dozens of baskets of various types of western drugs on sale; it is not known whether these drugs are real or fake or if their prices are reasonable but no agency has the responsibility of conducting inspections and taking the necessary legal steps.

On the other hand, the operations of the state stores are weak and their network is not widespread. The entire town of Phuc Yen has 10,000 manual workers and civil servants and 5,000 non-agricultural persons but has only 1 sales outlet for grain and food products. Many manual workers and civil servants do not have time to go shopping and must ride their bicycles for several dozen kilometers on their days off to Hanoi to purchase goods under ration standards.

DONG ANH DISTRICT STRENGTHENS MARKET MANAGEMENT

Hanoi HANOI MOI in Vietnamese 1 Aug 81 p 4

[Article: "Carrying Out Directive 109, Dong Anh District Displays New Efforts in Market Management Work"]

[Text] In coordination with financial, public security and commercial organs, the market management board of Dong Anh District has strengthened market management work and strictly controlled communication lines and key areas, such as the Dong Anh railroad station, Co Loa, To market, Nguyen Khe, etc.

In the first 6 months of the year, the district caught 333 instances of speculation, smuggling, illegal transportation and trade of goods totalling 76,198 dong--including confiscation of all supplies and goods in 286 instances totalling 66,802 dong, fines and collection of tax on temporary business in 34 instances. The district market management board instituted proceedings in an instance of attempted bribery, confiscating 490 dong which a crooked merchant used in an attempt to buy off control cadres.

Simultaneously, in the two months of June and July the market management board conducted control raids regularly, levying fines against 369 violations totalling 4,610 dong, including 112 instances of doing business without registration, 161 instances of failure to post prices, 50 instances of selling wrong commodities, and 46 instances of selling goods outside assigned places.

In coordination with the administrations of Uy No, Co Loa and Van Noi villages, market management units and management cells at individual markets have allocated places to vendors according to commodity groups. Big markets such as To, Van Tri, etc., are being consolidated and rearranged; that is why they now look neater and cleaner.

The district market management board has also joined forces with workers' control committees at the primary level in controlling compliance with distribution formulas at retail state stores and village marketing cooperatives. These control raids have discovered many violations--underweight packaging of monosodium glutamate, adulterating monosodium glutamate with white sugar, selling underweight rice to customers, diverting 5 cm-long imported nails from state stores for sale to outside buddies, and sold state goods for personal profit, etc. Contributing to overcoming the above flaws, the market management board and the workers' control committee have suggested that the organs in charge implement a number of measures with special focus on management work.

ECONOMIC PLANNING, TRADE, AND FINANCE

DETAILS OF NEW RETAIL PRICE SYSTEM ANNOUNCED

Hanoi NHAN DAN in Vietnamese 16 Sep 81 pp 1,4

[Article by Tran Linh of the State Price Commission: "On the Adjustment of Retail Prices and Service Fees"]

[Text] The party and state are always concerned with guiding and managing the system of retail prices and service fees. Under the conditions of the economy being subjected to continuous warfare and natural disasters, of production developing slowly, and of there being a serious shortage of goods, the basic spirit of the retail price policy is guidance which distinguishes among the various kinds of goods and services, in order to contribute to the simultaneous fulfillment of two tasks: maintaining and stabilizing the living conditions of the working people, especially the armed forces, the workers, the civilservants, the students, and the people with direct economic relationships with the state, and contributing to the struggle to stabilize free market prices and resolve the relationships of the economy.

In that spirit, the Political Bureau of the Party Central Committee has issued a directive regarding the continuation of the improvement of distribution and circulation which confirmed that there are two price systems: a system of relatively stable prices set and made public by the state and a system of prices applied flexibly in the commercial activities of state commerce and the marketing cooperatives.

In implementing the directive of the Political Bureau, under the conditions of not yet having carried out a reform of prices and salaries, the state has adopted the policy of temporarily maintaining the supply prices of goods supplied in limeted quantities or in unlimited quantities to members of the armed forces, workers, civil servants, and their families, and to students attending colleges,professinal and vocational middle schools, etc., while also adjusting the prices of the other kinds of goods, in order to eliminate irrational deficits, create more appropriate industrial-agricultural price ratio relationships, gradually overcome the situation of at-cost prices, positively serve and stimulate the development of production, carry out the redistribution of the national economy in the sphere of the entire society, contribute to consolidating and expanding socialist commerce, and gradually stabilize the market and prices. Therefore, in actuality the state price system includes three types of retail prices for consumer goods which correspond to the three types of goods distributed to the different categories and are appropriate to the consumption policy regarding the various strata of people under the present economic conditions of our country. Those three types of retail prices are:

Retail prices for the supplying of essential consumer goods and services (including both goods distributed in limited quantities and goods distributed in unlimited quantities) to members of the armed forces, workers, civil servants, and the categories supplied goods by the state according to stipulated policies. Such prices are especially tied in with the assuring of real salaries during the period in which we have not yet improved salaries and prices. Those prices are very low and the state runs up a very great deficit, so they are only used to calculate salaries and are only applied with regard to goods supplied to people who receive salaries. Fir that reason, that price system must be implemented in a strict, unified manner, along with the goods distribution system. No one has the right to arbitrarily supplement or amend it. If there are points which are deemed inappropriate to the specific conditions of each place and must be supplemented in order to be appropriate, a report must be submitted so that the Council of Ministers can review the situation and make a decision.

New guidance retail prices of goods and services are applied in the exchange of goods with the peasants, fishermen, salt-makers, handicraft workers, etc., who have signed two-way economic contracts with the state in order to strictly carry out those contracts, to organs, enterprises, and hospitals, and to meet the material supplement needs of some categories, in accordance with the stipulated systems. For example, cloth and sugar for people producing jute, rush, and tobacco, cloth to meet medical needs, labor protection equipment, some foodstuffs for those working during the third shift, working in unhealthy environments, in hospitals and clinics, etc.

The state's new guidance retail prices are set on the basis of the factors which determine prices in the new situation, which have tended to greatly increase. These prices are not based on the "free" market prices (which include the elements of speculation, sabotage, etc.), but on the policies of the party and state. They are closely related to the state purchase prices and the contracted-out prices of products in the collective and individual economic spheres.

The new retail guidance prices basically differ from the supply retail prices in that they closely reflect value and include some accumulation or no accumulation, depending on the nature of each type of goods: essential, secondary, or miscellaneous. Those prices take into consideration the supply and demand of each product, but in general must be planned and balanced with the incomes of workers and civil servants (who receive 100 percent allowances) and with the incomes of peasants fishermen, and handicraft workers (under the conditions of the new state purchasing and contracting-out prices), and must contribute to stabilizing living conditions, stimulate the development of production, facilitate the improvement of management and the implementation of economic accounting, etc. Therefore, only if we strive to stabilize those prices during the necessary periods of time can we carry out the organized exchange by means of two-way economic contracts, strengthen the state's control of the sources of goods, and prevent market prices from rising. If the new guidance retail prices increase we must review and adjust the various kinds of state purchasing prices, while also reviewing the actual salary levels of workers, civil servants, etc. The strict enforcement of the new guidance retail prices included in Resolution 220-CP ofthe Council of Ministers is very important and essential.

If the guidance prices are still lower than the free market prices and there are insufficient goods to sell on a normal basis, goods must be set aside in order to sign contracts to purchase the products of the collective and private economic sectors and there must be appropriate distribution modes, in order to avoid speculation and abuse. With regard to the goods of private mechants, disparities between the new prices and the old prices must be resolved by financial measures based on current policies.

It must be noted that the prices included in Decision No 220-CP of the Council of Ministers are standard prices that have been calculated and weighed on the basis of the value and utilization value of each type of goods. At the same time, there have been taken into consideration the relationships and imbalances of the economy: between industry and agriculture, between accumulation and consumption, etc. The standard prices must be based on the stipulated principles. Standard prices must not be regarded as minimum prices. The commercial organizations must not arbitrarily raise prices, for doing so would upset the bases on which prices are based, as discussed above, and will lead to a whole series of changes in the newly established guidance prices, especially in the buying-selling relationships based on contracts with peasants and handicraft workers.

Commercial prices are based on the goods capabilities of the state and are intended both meet the needs of the people and serve to stabilize the market and prices and contribute to resolving the relationships of the economy. Such prices can only be applied to some types of goods, such as those supplied on a nonrationed basis to the armed forces, workers, civil servants, etc., or outside the distribution to the various categories goods the consumption of which must be regulated.

Under the present conditions of the economy, in order to meet the above-mentioned requirements commercial retail prices must be guided flexibly, in a manner appropriate to the market situation, and we must select appropriate goods, accompanied by the other management measures, in order to counter speculation and illegal price increases. If guidance is not good we not only cannot hold down market prices but may exert a negative effect and the speculators may take advantage to push market prices upward.

A number of initial experiences during the recent period show that in order to effectively apply those prices the decisive matter is that there be a certain quantity of goods so that when the new prices are applied there will be sufficient goods to sell on a relatively permanent basis and stop speculation and price rises. We must not allow excessive price disparities among the various localities and areas, and it is very important that we tighten management and exercise strict control within the commercial organizations, combined with market management measures, in order to prevent speculation, hoarding, reselling, and market disruptions, which create difficulties for socialist economic activities and affect the lives of the people.

Due to the requirements of flexible, sharp guidance, of combining prices and the distribution of goods, and of combining the markets, especially the key markets, the state has assigned to the commercial ministries responsibility for guiding and leading those prices. In the provinces and municipalities, if the commercial prices are applied with regard to the products of the local economy they must also be based on the above-mentioned requirements and principles.

The retail prices of consumer goods and service fees have important plan contents, exert a profound effect on our people's living conditions, and contribute to resolving many economic and social relationships. Therefore, retail prices are guided in accordance with concentrated, unified principles. The specific prices that have been set by the competent organs must be strictly observed. The strengthening of control in order to assure that the state guidance prices are implemented well is an important and urgent mission at present.

STATE GOODS NOT REACHING CONSUMERS PROPERLY

Hanoi HANOI MOI in Vietnamese 8 Aug 81 p 3

[Consumer's Notebook column by "Nguoi Tieu Dung"(the Consumer): "They Must Still be Sold to the Right Persons"]

[Text] Recently, the commerce sector has expanded its business and begun selling a wider variety of goods. However, many products are being sold freely and the heads of stores are only concerning themselves with selling these products and bringing in money instead of giving attention to whom these products are being sold. For this reason, small merchants have taken advantage of the difference in price compared to the market price of a number of ordinary goods that many persons need and have been buying and reselling these goods, thus putting pressure on consumers.

Observing the various stores, a state store worker at one store was noticed selling 10 to 20 packs of matches, 5 to 10 packages of cigarettes, 10 bars of fragrant soap, dozens of tubes of toothpaste, dozens of meters of synthetic cloth and so forth to one person at one time. There was a very large crowd of shoppers in the store and the merchandise disappeared in an instant. When customers expressed surprise, the salesperson said: "There are some products that I simply sell to whoever comes first because they are products that are to be sold normally!" At some places, because of loose management of some essential goods, state store personnel sell only a small amount at their counters in order to "comply with the law" and sell the rest on the outside to small merchants or sell it "internally" in order to earn money for themselves. There are also places at which state store personnel struggle to not sell goods to friends and acquaitances but they lack the support of store security forces.

In order for goods to reach the hands of consumers, one would think that the stores must take steps to improve the way they sell retail goods. For goods for which cadres and the people have a large need and which are sold at prices lower than "free" market prices, a suitable mode of distribution should be implemented. At present, practically all retail goods are sold during the morning, during business hours; at lunch time and in the evening, when cadres and workers have time to shop, the stores have few goods.

When expanding the business of the commerce sector it is still necessary to give attention to selling goods to the right persons, primarily cadres, manual workers, civil servants and the armed forces.

NOTICE OF SUGAR, SOAP RATIONS

Hanoi HANOI MOI in Vietnamese 7 Aug 81 p 4

[Article: "The Sale of Sugar in July and the Sale of Soap and Laundry Powder in the 3rd Quarter"]

[Excerpt] Sugar: square number 5 of the Hanoi food products ration coupon for July 1981 will be used for the sale of sugar from 10 August to 15 September 1981.

Granulated sugar will be used as the standard. One kilogram of granulated sugar is the equivalent of 1.5 kilograms of cube sugar or 2 kilograms of honey.

Soap and laundry powder: square number 12 in the September 1981 food products coupon will be used for the sale of soap and laundry powder from 10 August to 30 September 1981. Each square can be used to purchase 350 kilograms of cake soap, powdered soap or laundry powder of similar volume.

Attention: the ration standards for sugar in June, 1981 and for soap and laundry powder in the 2nd quarter will continue to be in effect until 15 August.

HANOI BUYS PIGS FROM PRIVATE CITIZENS

Hanoi HANOI MOI in Vietnamese 14 Aug 81 p 4

[Article: "Pigs Purchased at Negotiated Prices"]

[Text] Hanoi has agreed to purchase live pigs at negotiated prices at the houses of private citizens.

Purchasing prices:

Pigs weighing from 35 to less than 50 kilograms:	22 dong per kilogram
From 50 to less than 60 kilograms:	23 dong per kilogram
From 60 to less than 70 kilograms:	25 dong per kilogram
From 70 to less than 80 kilograms:	26 dong per kilogram
80 kilograms or more:	27 dong per kilogram

Notification of pigs for sale can be made at the Ngoc Ha, Chau Long, Nga Tu So, Kham Thien, Cho Mo and Le Quy Don Food Stores and the office at number 10 Cao Thang Street.

Method of notification of sale: persons who have pigs for sale should write their name, address and the number of pigs for sale on a piece of paper and put it into the letter box at one of the sites mentioned above. Personnel of the station will come to your house and arrange a date for picking up the pigs.

HANOI YOUTHS LEAVE FOR LAM DONG NEW ECONOMIC ZONE

Hanoi HANOI MOI in Vietnamese 5 Aug 81 p 1

[Article: "Bidding Farewell to Hanoi Assault Youths Leaving for Lam Dong"]

[Text] Yesterday evening, 4 August, the Hanoi municipal executive committee of the Ho Chi Minh Communist Youth Union held a ceremony to bid farewell to 171 members as well as youths of the assault youth unit volunteering to leave for the Hanoi NEZ in Lam Dong. This was the first departing batch of the Hanoi assault youth.

At the Hang Co railroad station, assault youth companies from four city precincts in blue uniforms lined up in impeccable order, ready to go south for the new task. On behalf of the municipal youth union, Secretary Luu Minh Tri made a statement at the farewell ceremony, emphasizing that the birth of the assault youth unit volunteering to go to the NEZ has responded to the requirement of national building, attesting to the revolutionary capability of Hanoi youths. Secretary Tri looked forward to seeing the departees overcome all difficulties in the NEZ, and promote the tradition of laboriousness and bravery and the spirit of "three assaults to achieve collective ownership" of the Hanoi youth, so as to record many achievements in opening new lands and in building and strengthening the Hanoi NEZ.

Nguyen Dong, Municipal VCP Committee standing member and Municipal People's Committee vice chairman, gave an assault youth unit banner to its members. Leaders of the four youth companies then affixed their signatures to the Union's traditional remembrance album.

Phan Van Tuyen, composite unit leader, on behalf of members of both sexes gave a pledge of unity and determination to perform properly in all areas of production, study, artistic performances and enjoyment, and sports, so as to merit of the Hanoi people's trust.

AGRICULTURE

'NHAN DAN' EDITORIAL SUPPORTS CONTRACTED-OUT RAISING OF DRAFT ANIMALS

Hanoi NHAN DAN in Vietnamese 16 Sep 81 p 1

[Editorial: "Contract Out the Raising of Water Buffaloes and Oxen"]

[Text] In cultivation, soil preparation is a basic technical task which begins the production season and has a decisive significance regarding the requirements of assuring the seasonal schedule, cultivating the entire area, and increasing crip productivity. Since most of the agricultural labor is manual, most of the soil preparation work is done by using the draft power of water buffaloes and oxen. Only about 20 percent of the total cultivated area in the northern provinces is worked by machinery. The water buffaloes and oxen are not distributed uniformly. In the delta provinces there is still a serious shortage of water buffaloes and oxen, and during many years they must bring in draft water baffaloes and oxen from the mountain region. Meanwhile, the number of water buffaloes in the delta has steadily declined.

In October 1979 the Council of Ministers issued a resolution stipulating specific points to encourage the development of water buffaloes and oxen and eliminate a number of restraints in some old policies. After that, the number of water buffaloes and oxen did not decline, and in many places it tended to increase a little. The situation of stock raising and the development of water buffaloes and oxen hasn't changed very much, especially in the agricultural cooperative sector. The situation of water buffaloes and oxen belonging to collectives not receiving the necessary care and nourishment, but having to work excessively, is widespread. Every year a considerable number of water buffaloes collapse in the cooperatives. Many borrow money from banks to buy additional water buffaloes and oxen, or to buy machinery to plow and harrow, and do not take good care of the existing water buffaloes and oxen. Their draft and breeding animals decline in numbers. Places which heavily mechanize soil preparation regard the tending of water buffaloes and oxen even more lightly.

Since the various places have expanded the contracting out of production in cultivation, the use of draft power and the raising of water buffaloes and oxen in the cooperatives have given rise to new problems. At the beginning of this year's 10th month season, many localities and cooperatives in the provinces of Ha Bac, Nghe Tinh, Ha Nam Ninh, etc., tested the contracting out of the raising of water buffaloes and oxen to groups and individual workers. Although the initial results don't amount to much, they have provided us with some good experience and a conclusion regarding some problems of widespread significance. That conclusion was that the expansion of the contracting-out of the raising and management of water buffaloes and oxen to workers is necessary and appropriate to the method of contracting-out production in cultivation. It has overcome the negative phenomena in the old management method, and the water buffaloes and oxen have begun to increase with both quality and numbers. They have been well cared for and protected, their health and draft power have been improved, and the planting schedule and soil-preparation techniques are assured, and the water buffaloes and oxen provide more fertilizer than in the past.

The improvement of the method of managing and contracting-out draft animals must meet the following principal requirements: gradually raising the quality and quantity of the draft animals and using them rationally and with high effectiveness. The delta area must pay attention to developing water buffaloes and cattle for both draft power and breeding, and advance to producing sufficient draft animals locally.

In contracting out, appropriate forms should be used, depending on the conditions of each place (concentrated livestock raising, livestock raising by groups of workers, or contracting out to individual families), but it is necessary to observe a number of common principles. Water buffaloes and oxen must be well-fed, fat, and healthy so that they can be strong and provide much fertilizer. Draft animals should not be used to distribute work points. People who agree to raise water buffaloes must meet all the necessary conditions. The cooperatives must have specific agrements regarding the tending and use of water buffaloes: there must be contracts between the cooperatives and the people raising the livestock, and an explicit system of awards and punishments must be stipulated. The points included in Resolution No 357 of the Council of Ministers, dated 30 October 1979, regarding the policy of encouraging the raising of water buffaloes and oxen and the stopping of illeged acts, must be correctly implemented.

The localities and cooperatives must plan their draft power, including the draft animals of both the collectives and the families, to form a unified structure under the management of the cooperatives. Attention must be paid to all three benefits when contracting out the raising of draft animals, and above all there must be appropriate concern for the benefit of those accepting contracting-out. The living conditions of the people raising livestock and those doing the plowing. It would be best if the people raising the draft animals and the people doing the plowing were the same, so that the water buffaloes and oxen can be well-cared for and do good work.

The contracting-out contracts must stipulate specific measures and contents regarding the utilization time of water buffaloes and oxen, health and weight standards, the area to be plowed, breeding capabilities, the fertilizer volume, the degree of weight gain when fattening draft animals for breeding, etc. Special attention should be paid to resolving the feed problem, and improving the health of the animals, ability to plow and harrow, and breeding capability.

The contracting-out measures of Tan Yen District in Ha Bac Province may be regarded as good experiences.

HALF MILLION TONS OF COAL EXPORTED BY HON GAI MINE

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 24 Jul 81 p 6

[Text] In the first 6 months of this year, the Hon Gai Coal Corporation has exported 554,000 tons of coal representing 68.7 percent of the yearly year plan and an increase of 82 percent over the export norm for the first 6 months of 1980.

The two Coal Selecting Corporations of Hon Gai and Cua Ong have applied the product contract system to ensure complete loading of each ship and have offered rewards in kind to motivate male and female workers to satisfactorily maintain and operate transportation equipment and to complete coal loading prior to the contract deadline. Dozens of thousands of dollars have been awarded to workers in both corporations.

HEAVY INDUSTRY AND CONSTRUCTION

IMPROVED MANAGEMENT TO INSURE COAL SUPPLY ASKED

Hanoi HANOI MOI in Vietnamese 11 Aug 81 p 3

[Article by Quang Cat: "Good Management Is Needed in Order To Improve the Supply of Coal"]

[Text] Many factories are experiencing a shortage of coal and must live "from hand to mouth." Some units have even had to stop their production because of the shortage of coal. Why does this shortage exist?

During the first 6 months of this year, the Hanoi Coal Management and Supply Corporation only received 28 percent of the coal due to it under its plan for the year; meanwhile, coal production, generally speaking, met requirements (48 percent of the plan for the year). Hanoi received very little coal primarily because of the shortage of means of transportation. Whereas it should have received some 2,000 tons of coal per day, it has only been receiving from 250 to 350 tons and the grades of coal that it has received have not met requirements.

Coal reserves are very low, especially the reserves of the various grades of coal. Whereas the corporation used to have a mountain of coal in reserve amounting to 50,000 to 130,000 tons of coal, this "mountain" has become a hole.

The discarded coal of the central and local factories and enterprises is not turned over to the corporation. These units sell a large quantity of burned coal and, as a result, make the coal shortage even worse. Last year, one unit sold to its cadres and manual workers 500 tons of burned coal and sold 9,000 tons on the outside. This year, this figure has remained unchanged. On the other hand, due to the shortage of coal, many negative phenomena continue to emerge: the theft of coal occurs routinely; drivers sometimes sell the coal they are transporting; and it is commonplace for persons who unload coal to irresponsibly and intentionally spill coal on the road. All of these factors have made the shortage of coal even worse.

In the face of this situation, the Hanoi Coal Management and Supply Corporation has made a number of efforts. The guideline of the corporation is: in order to supply coal well, there must be good management. Between mid-1980 and early 1981, the corporation, together with concerned agencies, visited various units to re-examine their coal use ceilings, conduct inspections and establish new ceilings. In Hanoi, 105 ceilings were established. In order to formulate these ceilings, work teams consisting of representatives of many sectors, including representatives of the corporation, visited the various services, cooperatives and stores within the city. Units directly subordinate to the central level also formulated some 144 ceilings. The work teams worked in the Dong Xuan Knitting Mill, the Hong Ha Office Supplies Plant, the Hanoi Distillery and so forth in order to formulate more scientific ceilings for the purpose of reducing the consumption of coal or switching to a more readily available and cheaper type of coal. Everyone recognized this as a worthwhile effort. If implemented as planned, 25,853 tons of coal will be saved this year. The shift from lump coal to "cam" coal will result in a savings of 16,000 tons.

However, it is difficult to determine the results achieved at the six installations that have implemented ceilings: the Thuong Dinh Tennis Shoe Enterprise, the Truc Bach Paper Mill, the Thuong Dinh Flour Mill, the Chua Boc Flour Mill and the Thai Ha and Ba Nhat Chemical Cooperatives. For example, at the Thuong Dinh Tennis Shoe Enterprise, the consumption of coal has risen to 0.42 ton per 1,000 pairs of shoes instead of the ceiling of 0.37 ton; at the Truc Bach Paper Enterprise, the ceiling has risen to 1.57 tons of coal per ton of product instead of the ceiling of 0.95 ton.

The use of coal has exceeded coal consumption ceilings for the following reasons: the initial weighing of coal was inaccurate; the coal that has been supplied has not been of the correct type or quality; and coal that is stolen is still computed as purchased coal. This is a common phenomenon that the various sectors must overcome.

The corporation has also been concentrating on supplying coal on a priority basis to the key units. To accomplish this, the cadres of the corporation have had to dispatch every shipment of coal arriving at the corporation. During the first 6 months of this year, the key installations were supplied with 30 to 53 percent of the coal due them under their plan for the year: the Tran Hung Dao Machine Works: 51.2 percent; the Brewery: 49.8 percent; Pharmaceuticals Enterprise Number 1: 42.2 percent; the Sao Vang Rubber Enterprise: 42 percent; and the 8 March Textile Mill: 37 percent.

However, this supplying of coal on a priority basis still amounts to a "hand to mouth" plan. In the past, some enterprises had enough coal reserves for one-half month; now, however, they only have enough reserves for 2 or 3 days.

In addition, the corporation has begun to transport coal itself in order to speed delivery, struggled against units using coal improperly, reclaimed coal taken by thieves, made full use of discarded coal and coal that does not meet specifications and so forth. This year, the corporation prepared and put into use regulations for use in the signing of contracts for the purchase and sale of coal. The corporation has worked with its customers to establish coal reclamation rates and has closely coordinated with the Hanoi Fuel Corporation to improve the management of the reclamation of coal. Compared to the same period of time last year, the reclamation of unburned coal at the Yen Phu Power Plant has resulted in 1,203 additional tons of coal. The coal lying under the sorting equipment at the Rong Dong Incandescent Light and Thermos Bottle Factory, Tool Making Machine Plant Number 1, the Nghia Do

MSG Enterprise, the Soysauce Enterprise, the Vietnam-GDR Hospital, the Bach Mai Hospital and so forth was reclaimed and supplied to other places. The effort to combat the illegal purchase and sale of coal has been intensified. At present, the corporation, in coordination with the Public Security Service, is holding 1,000 tons of illegally acquired coal of another corporation.

The Hanoi Coal Management and Supply Corporation is in charge of a large area which includes, in addition to Hanoi, a number of other provinces. It is acquiring more and more customers. It faces an extremely complex situation due to the shortage of coal and its many customers. During the preliminary review of work during the first 6 months of the year, the corporation's leaders pointed out the shortcomings in management, control work and compliance with policies and also set forth corrective measures. For the foreseeable future, many difficulties will continue to be encountered in the purchasing and transportation of coal. The corporation must improve its management, supply coal in an efficient, scientific and fair manner, revise coal consumption ceilings, formulate new ceilings and so forth. The concerned agencies must organize the development of local sources of peat, accelerate the use of economized coal and wage a strong struggle against coal thieves and persons who conspire to steal coal. Only in this way is it possible to reduce the difficulties being encountered at present in supplying coal.

SHORTAGE OF LOCOMOTIVES IN HO CHI MINH CITY

Hanoi HANOI MOI in Vietnamese 11 Aug 81 p 4

/Article: "The Railroad Sector Supports the North-South Line"/

/Excerpt/ Recently, in the routing of equipment, the railroad sector has provided locomotives that are in good condition to support the North-South line and guided the rapid handling of strategic goods. Practically all of the locomotives in the Ho Chi Minh City area are General Electric locomotives manufactured by the United States; they have now broken down and there is a shortage of repair parts. The sector organized the transfer of locomotives from the northern rail lines and reduced the transportation of cargo and passengers of the various localities in order to give priority to north-south transportation and resolve the southern region's difficulties with locomotives.

NEGATIVE PRACTICES IN PUBLIC HEALTH SECTOR DETECTED

Hanoi SUC KHOE in Vietnamese 20 Aug 81 p 6

[Article by Thu Nga: "A Preliminary Review of the Movement Against Negativism in the Public Health Sector"]

[Text] The public health sector recently held a conference to summarize the movement against negativism in 1980 and in the first 6 months of 1981 in units subordinate to the Ministry of Public Health.

Over the recent past, the movement against negativism has been conducted in all subordinate units and public health installations in the provinces and cities of North Vietnam. The Bach Mai Hospital, the Traditional Medicine Institute, the Protection of Mothers and Children Hospital, the Opthalmology Institute, Hospital E and the Hanoi Medicine College have been chosen by the Ministry of Public Health as key units to initiate the movement against negativism since the beginning of 1980. Bad habits such as theft, bribery and oppression of the masses--especially the theft of medicines--have been considered by the public health sector to be primarily important targets which are closely related to the patients' lives and to the state property.

Throughout the movement against negativism, Steering Committee No 79 of the Ministry of Public Health has detected many gaps in the management and distribution of medicines such as losses of medicines in the transportation process (Level-1 Pharmaceutical Products Corporation), losses of medicines due to storage negligence (Level-1 Pharmaceuticals Corporation), losses of medicines due to loose management in the production process (Pharmaceutical Products Corporation 1) and introduction of medicines into the free market following "phony prescriptions" given by physicians to public health cadres and personnel to enable the latter to buy medicines and then sell them to make a profit. A large amount of medical equipment and machines have been irrationally maintained and used (as in the case of Vietnam-Soviet Friendship Hospital). The norms set in the systems designed to invigorate patients and concerning their grain and food rations have been cut down (Bach Mai Hospital). Many fabric items such as clothes and swaddlings, basins and so on intended for patients have also been lost in large quantities (Saint Paul and Hai Ba Trung Hospitals). Other negative practices such as bribery and oppression of the masses have also been uncovered and corrected.

Through the movement against negativism, the Bach Mai, Dong Da and Hai Ba Trung Hospitals and the Dong Da Drug Store have promptly prevented negative practices by struggling against medicines theft, taking precautions against theft and insuring that medicines reach patients. Cases of loss have been reduced markedly. Compared with 18 cases of theft in 1978, the public health units in Hanoi City experienced only 9 in 1980 with a noticeable reduction in the value and quantity of the losses.

Yet, the movement against negativism has neither developed evenly nor brought about great results. Negative practices have decreased but have not yet been completely eradicated. Ever since the application of the two-way agreed price system, negative practices have taken a new turn: A number of installations have used the supplies and raw materials provided by the state to produce according to plan No 3 and have distributed goods within their own confines and raised private cash funds to easily make expenditures. In some units, a low spirit and a bad attitude have sometimes been shown in treating patients and there have been scattered instances of bad temper, scolding and authoritarianism toward patients and negligence in taking care of them.

According to the guidelines and program of action against negativism, the public health sector will henceforth continue to concentrate its efforts on the struggle against the habit of stealing medicines, against the physicians' practice of issuing "phony prescriptions" and taking bribes, against the loss of valuable medicines during the transportation process and against the overbearing and oppressive attitude toward patients or the improper behavior with regard to medicine buyers. The public health sector will pay special attention to continuously and satisfactorily managing antiepidemic and preventive medicines, curing social diseases and promoting planned parenthood.

TABLE OF CONTENTS OF 1976 TRUONG CHINH BOOK OF SELECTED WORKS

Hanoi CACH MANG DAN TOC DAN CHU NHAN DAN VIET-NAM in Vietnamese 1976

/Publishing information, introduction and table of contents of Volume II of the selected works of Truong Chinh entitled "The National Democratic Revolution of the People of Vietnam"; published by Su That Publishing House, Hanoi, 1976, second printing; 50,200 copies printed at the Tien Bo Printing Plant in Hanoi, printing completed on 25 May 1976/

/Text/ The War of Resistance Will Surely Be Victorious (pp 7-144)
(full text of 1947 book by Truong Chinh, the introductory note to which follows)

Introduction

The country of Vietnam is being ravaged and torn asunder by the enemy. The people of Vietnam are waging a heroic war of resistance, determined to avenge themselves. Will Vietnam survive? This is a question being asked by our compatriots and even by notable personalities overseas.

Our response to this question is that the nation of Vietnam shall never perish! Because, the effort to liberate Vietnam is a part of the new and surging democratic movement in the world. The enemy of Vietnam, French colonialism, is a part of the antiquated, decaying system of imperialism, which has been denounced by history.

At present, the army of Vietnam is still weaker than the enemy's army; therefore, we must fight a protracted war; we must fight while developing our forces, must spread out the forces of the enemy so that we can totally annihilate them some day in the future. All the people must fight the enemy; they must fight the enemy in every way, militarily, politically, economically and culturally; we must fight in such a way that the enemy encounters our strong resistance everywhere, that the enemy is suffocated, surrounded and unable to live quietly in our country.

The material presented here sets forth the guideline of being determined to fight the French colonialists in order to win true independence and unification for the fatherland, maintain and expand the Democratic Republic of Vietnam and make a small contribution by the Vietnamese to the cause of protecting peace and democracy in the world.

The war of resistance of Vietnam is a just war. A just war usually has the participation of many persons and an abundant source of strength within the people. However, the experience of the Abyssinians in their resistance against Italian fascism from 1935 to 1936 proved that a just war can be defeated if the military is commanded incorrectly, if propaganda, agitation and diplomatic activities are poor. The Abyssinian example must light our way today.

Winning final victory in this long and difficult fight will not be easy. Victory can only be won when we meet the following fundamental conditions: our political and military lines must be correct, we must tightly unite all the people, our rear area must be strengthened, our army and people must be heroic and our commanders must be talented.

This corps of resistance has heightened the prestige of the nation of Vietnam in the world and developed upon the best traditions of the descendants of Lac and Hong. All of the people in the country have been and are arising, responding to the sacred appeal of the fatherland. Everyone is emulating everyone else in the struggle, determined to repay their debt to the country and not prove themselves unworthy of their forefathers.

The greatest strengths of the war of resistance fought by the House of Tran were a high degree of resourcefulness and shrewd planning.

The grestest strongpoints of the war of resistance fought by the later Le Dynasty were patience and perseverence.

The greatest strongpoint of the war of resistance fought by the Nguyen Quang Trung Dynasty was rapid and strong attacks.

Under the guidance of President Ho Chi Minh, our national hero, a combination of historic experiences and experiences of foreign countries is being implemented in order to turn defeat into victory. All the people are making tremendous sacrifices and efforts.

Therefore, regardless of how aggressive and evil the French colonialists become, our people's long war of resistance will surely be victorious.

"The War of Resistance Will Surely Be Victorious," this is our unshakeable belief. It is also a motto that we have used as the title of this book (which consists of articles on the war of resistance that were printed in SU THAT Newspaper, issues 70 through 81(1), were reread and supplemented), published by Su That Publishing House on the second anniversary of the Nam Bo war of resistance.

Bac Bo, 19 September 1947

TABLE OF CONTENTS OF 1976 PHAM VAN DONG BOOK

Hanoi THANG LOI VI DAI, THONG LAI HUY HOANG in Vietnamese 1976

[Publishing information, introduction and table of contents of Pham Van Dong book entitled "A Great Victory, a Brilliant Future"; second printing, published by Su That Publishing House, Hanoi, 1976; 10,100 copies printed at the Tien Bo Printing Plant in Hanoi, printing completed 15 March 1976]

[Text] Publisher's Note

The most brilliant war of resistance in the history of our nation, the resistance against the United States for national salvation, has ended in a great victory. The Vietnamese revolution has travelled a course filled with treacherous obstacles and is now advancing strongly into the new stage, a stage with a heroic spirit and extremely bright prospects.

In order to record the recent brilliant period of history and its feats of arms, we have selected a number of representative reports and speeches by Premier Pham Van Dong, member of the Political Bureau of the Vietnam Lao Dong Party Central Committee, and compiled them in book form under the title "A Great Victory, a Brilliant Future."

This book has the value of a collection of important historic documents. Through the articles written from 1954-1955, when the U.S. imperialists directly invaded South Vietnam, to 1975, the book helps us to systematically and comprehensively review the aggression against Vietnam by the U.S. imperialists; the intolerable, barbarous crimes they committed in both North and South Vietnam; and the continuous defeats suffered by the U.S. imperialists in the face of the unyielding fight waged by a nation that has a long standing tradition of resisting foreign aggression. In particular, this book helps us to understand the origins of an event of epochal significance: the victory by Vietnam, a small, backward, agricultural country with a small population, over the U.S. imperialists, the ringleader of the imperialists, the most powerful, aggressive, cruel, shrewd and reactionary imperialist in the capitalist world. These origins were the role and the wise leadership of our party, the great Vietnam Lao Dong Party, a party that adheres to ever victorious Marxism-Leninism and was founded, organized and forged by President Ho Chi Minh and the lines of the party, the correct and creative political line, military line and international line, which always reflected initiative and creativity. It was these correct, creative, independent and autonomous lines of the party that awakened and highly developed the extremely valuable traditions of the nation; mobilized all the energies and intelligence of our 40 million compatriots from the north to the south and made them determined to fight and win; won the tremendous assistance of the fraternal countries and our friends throughout the world; rallied practically every freedom and justice loving force in the world, including progressive Americans and established a world people's front that sympathised with and supported Vietnam in its victorious fight against the U.S. pirate aggressors.

Our people's war of resistance against the United States for national salvation has won total and complete victory. The Vietnamese revolution has entered a new period, the period of the socialist revolution and socialist construction throughout the country, the brilliant period of development of a Vietnam of peace, independence, unity, democracy, prosperity and strength.

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

GOVERNMENT TROOPS AMBUSH REACTIONARIES IN DAC LAC

Hanoi QUAN DOI NHAN DAN in Vietnamese 9 Sep 81 p 3

[Article by Duong Minh Hoat: "Destroy Reactionaries in Deep Jungles of Central Highlands"]

[Text] Battalion 6 of the Dac Lac local forces and the militia had the task of cutting across jungles to search for and destroy an enemy group. Along with the local administration and mass organizations our combatants mobilized the masses and educated minority nationalities, relying on the people's help to track down enemy agents to their hideouts.

Following days of torrential rains, the sky on the Central Highlands became dry and fair. The people reported to Battalion 6 commander on the existence of an enemy communications corridor, and on an enemy group attempting to cross the border to pass on important directives from international reactionaries to reactionary ringleaders in Dac Lac.

Acting on this information, Battalion 6 promptly organized a team of cadres and combatants familiar with the terrain to move across jungles to track down, intercept, and destroy the enemy. Under the guidance of two local cadres and militiamen, the team left the base the same night. Many suffered bruises after one night crossing springs with impetuous currents, inching along rock gorges covered with slippery moss and squeezing through vine and ramie forests. Another day elapsed and there still was no enemy trace. At sunset, mountains and forests on the Central Highlands looked gloomier. The commander ordered the team to stop for a rest at the middle of a mountain slope. Then the team resumed the operation so as to be on time to intercept the enemy at an advantageous spot. Another night and another day were spent traversing jungles. Past midnight the following day, the commander ordered the team to stop at the planned ambush point. This was a tiny trail close to the border. Y Had, a militia guide, suddenly noticed scattered traces of puppet troops' shoes on a piece of land, nearly obliterated by jungle rains. Human footprints were mised with spoors of deer and wild rabbits.

The commander immediately ordered the team to lie in ambush formation in an area sandwiched between a virgin forest and thatch and reed thickets, each combatant receiving a specific assignment. One hour, two hours, three hours elapsed, the combatants kept on observing quietly and waiting patiently. Then they heard a deer's cry. They had learned from many previous trips across jungles on the Central Highlands that approaching human presence had frightened deer into crying. All pairs of eyes were focused on the direction from which the noise originated. As expected, at the other end of the reed forest a human form appeared, cautiously moving forward. Stunned by the deer's cries, the man halted, looked around, then gingerly moved on. Probably he thought that the revolutionary armed forces could not penetrate the heart of these dense virgin jungles to chase him and his group. All team members clearly saw a group of persons emerging from the forest. These unquestionably were reactionaries attempting to cross the border. They had forced a local villager wearing a rattan knapsack to act as guide. Behind him, three revolutionaries toting AR-15 guns moved in ready-to-fight formation. As the entire enemy group came within firing range, brief AK volleys of the unit suddenly rang out. The commander who led the blocking element, promptly burst into the trail to nab the foremost enemy. The next two reactionaries opened fire in counterattack, but they were outfired by waylaying combatants on both sides of the trail. Wounded, one reactionary ran to a spring bank. Taking advantage of the terrain, he tried to resist while finding ways to slip away, but the rear element had blocked his escape. Two militiamen and an armyman emerged in front of him, mowing him down with an accurately-directed AK volley.

So, after three long days and nights pursuing and staying close to the enemy in deep jungles, the combatants had neatly destroyed an enemy group, taken prisoners, and confiscated weapons as well as important documents.

VIGILANCE AGAINST LACKEYS WHO FAILED TO BE REEDUCATED URGED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 23 Jul 81 p 1

[Editorial: "High Level of Vigilance Towards U.S.-Puppet Henchmen Who Refuse to Be Reeducated"]

[Text] The Ho Chi Minh City People's Court has just meted out severe sentences in the case of a group of counterrevolutionaries guilty of robbery and murders and engaged in organizing flights of people abroad. The four leaders of the group, Phan Van Tan, Vo Xuan Duong, Pham Cong Hien, and Nguyen Minh Sang, have been sentenced to death. The others have received lighter or heavier sentences depending on the nature and level of criminality of their actions.

Our people have enthusiastically welcomed the enlightened decisions of the court which has dealt really severely towards the ringleaders, the masterminders of the crimes, and shown leniency towards the accomplices.

Who are they, Tan, Duong, Hien, Sang and the others who are seriously implicated in this case? Are they merely regular, common criminals?

Definitely no. They are a bunch of fiendish henchmen of the U.S. imperialists and the country sellers belonging to the old puppet army and government, those who have nurtured in their very blood hatred towards the revolution, those who have directly participated in the shooting and killing of our compatriots, in the massacre of our people, in the service of the aggressive aims of the U.S. bandits. Through years working as lackeys of the U.S. bandits in killing and slashing down the people, they have been successfully trained by the enemy to become totally devoid of human feelings, ready at any moment to wallow in the blood of our innocent compatriots in cold blood so as to realize their criminal schemes.

In the case of these elements, the shameful rout of the U.S. bandits in the spring of 1975 has not awakened them. On the contrary, they have only further nurtured their hatred towards the revolution and towards the people who have totally taken over the ownership of the land. This is why they stubbornly fought against the generous policy of leniency of the Government and of the people, they stayed away from study and reeducation, they stealthily lived out their lives as bandits to fight against the people and sabotage the country at a level of criminality which is even higher, more repulsive than in the past. The evidence shown of their murders, performed in many different savage ways, adduced in the trial clearly shows that they were nothing but the continuation of a long chain of crimes that they had perpetrated under the U.S.-puppet days. It is also equally clear that these crimes are blood related to the counterrevolutionary, nation betraying nature of these puppet soldiers who refused to be reeducated. In the case of these bandits their nature can no longer be reformed.

The U.S. imperialists and Peking expansionists have failed miserably in their aggressive war against our country. But they have yet to give up their dark schemes which they entertain towards our country. Disruption of our political security and public order, economic sabotage and inducement of people to flee abroad, etc. these are all part and parcel of their vicious plots. Considered from this vantage point, Tan, Duong, Hien, Sang and their ilk have acted in exact accordance with the plot of foreign enemies through their kidnappings, murders, robberies, and their organizing flights of people in order to extort money and gold. In accordance with the trick which has since been used by a number of lackeys of the enemy, they have also spread the news of the establishment of this counterrevolutionary "force" or that phantom "government" so as to cause certain effects in the people's opinions, hoping thereby to unsettle people's psychology, which will then make it easier for them to carry out their activities of robbing and killing the people.

But they have run against a stubborn reality and that is, the unalterable hatred and enmity of our compatriots towards the evil lackeys of the U.S. bandits and their high-level vigilance towards those who stay away from reeducation and reform, which makes it that they keep relentlessly after such elements. In the eyes of our compatriots their crimes and robberies have by themselves patently demonstrated their cheating, treacherous political tricks. It was precisely the hatred and keen vigilance of our people and of the security forces which made them follow closely their actions and trap them in a fully deserved net so that today they could be brought out to be sanctioned by the law.

We have just crushed a counterrevolutionary den, a source of calamity for the peaceful life of innocent people. But around us it cannot be said that these despicable weeds have all been uprooted.

This trial serves as a reminder that no one should relax his vigilance, that no one should entertain fuzzy opinions regarding the nature of these U.S.-puppet lackeys who stayed away from reeducation. To remain unclear and not to stay awake in their case is to create the conditions for them to survive and continue their crimes, hitting us in our very body.

The Ho Chi Minh City people and security forces ceaselessly raise their vigilance and do really well the movement for protecting the security of the Fatherland. Fully awake, they look clearly into the face of each criminal of yesterday who may still be in hiding so as to be ready to knock them down even before they could continue to cause calamity for the people and for our country.

ARBITRARY USE OF GRAIN AT COLLECTIVE MESS HALLS REVEALED

Hanoi HANOI MOI in Vietnamese 26 Aug 81 p 4

[Article: "'A Story A Day' Column by 'The Builder': Why These 'Extra' 15,200 kg of Grain?"]

[Text] Right after receiving information from a security organ that at Enterprise 107 (of Building Corporation 1, Ministry of Building) hundreds of persons listed as workers were not present at worksites, the Grain Service sent a control unit to the 107 collective mess hall to look into the use of grain. With the active help of the People's Organ of Control of Ba Vi District, the control unit examined the books from January through July 1981, and initial check showed a surplus of 15,200 kg of grain which must be returned to the state.

Asked about the reason for that grain surplus, the managers of mess hall 107 were quite embarrassed. Not to speak of the fact that the amount of grain requested for non-existent persons had damaged state properties for years, that grain surplus alone was enough to reflect the grave nature of the arbitrary use of grain at a collective canteen.

In light of this story, The Builder believes that grain control should be conducted regularly, especially at places of frequent manpower turnovers, such as building worksites, schools with collective boarding and lodging, etc. Experiences have shown that timely control, settlement and prosecution, including measures to take back grain excesses, to make wrongdoers compensate for the loss, and to strictly punish willful violators, etc., will recover for the state a quite sizable volume of grain for distribution to society.

NGHE TINH CONFERENCE ON OIL, GAS PROTECTION

BK190739 Hanoi Domestic Service in Vietnamese 2300 GMT 18 Oct 81

[Text] The paper QUAN DOI NHAN DAN [date not given] has reported that in compliance with a directive from the chairman of the Council of Ministers, the Rear Services General Department and Nghe Tinh Province organized a joint conference recently to assess the duty of the soldiers and people in the province to protect gasoline and oil pipelines and depots.

The conference served to make localities in the province more fully aware of the role of gasoline and oil in economic development and national defense, the causes of their losses and the province's specific responsibilities in protecting these installations. Localities are also aware that the pipelines, depots, tanks and tankers within the province's jurisdiction are socialist property which the party and state have entrusted to the provincial party and administrative organizations for management and protection.

Responsible echelons must educate and motivate the people not to violate state property and, whenever an accident occurs to the pipeline, not to take away gasoline and oil without permission. They must also activate the people to help prevent all illegal acts.

Law-enforcement organs will exercise intensive control of socialist property, promptly settle cases of violation and conduct open trials of and severely punish dishonest persons.

Together with the POL units, the province will organize uniform control of the POL facilities. Public security and self-defense and militia units, which are the main force in protecting these facilities, will work out coordinated protective combat plans to ensure the safety of the pipelines, depots and tanks.

PHAM VAN DONG MESSAGE TO WORLD WOMEN'S CONGRESS

OW081535 Hanoi VNA in English 1452 GMT 8 Oct 81

[Text] Hanoi VNA 8 October--Chairman of the Vietnamese Council of Ministers Pham Van Dong has sent a message of greetings to the world women's congress held in Prague, Czechoslovakia, from 8-13 October.

After welcoming the Women's International Democratic Federation (WIDF) and other women's organizations for sponsoring the congress, the Vietnamese premier said:

"Having followed with keen interest the development of the world women's movement for years since their congresses in Mexico City and Berlin in 1975--Women's International Year--I express my admiration for the considerable contributions made by millions of heroic mothers, millions of intelligent, courageous and altruistic women to the persistent struggle for peace, national independence, democracy and the liberation of women.

"The present world is facing an arduous and complex struggle between the peace-loving forces and the U.S.-led warlike forces which are scheming to accelerate the arms race, expediting the production of neutron bombs and other lethal nuclear weapons, rekindling the cold war and threatening world peace. Together with other progressive people, women on all the five continents are strengthening their solidarity in an inevitable victorious struggle to defend peace and detente in the world as a whole.

"In this spirit, we are confident that the Prague congress will be an important forum to voice the strength and iron-like determination of millions of women in the world."

Premier Pham Van Dong also thanked women's organizations and other movements in the world for their valuable assistance to the Vietnamese people in their socialist construction and national defence.

BRIEFS

CUBAN SPECIALISTS DECORATED--Hanoi, 25 Sep (VNA)--Authorised by the council of state, Vu Thang, president of the Binh Tri Thien Province People's Committee, has conferred Vietnam's Friendship Order on Miguel Martinez Sosa and Hogolio Capotillo Beja, respectively head and member of the Cuban building group working at the Vietnam-Cuba friendship plyclinic in the provincial capital of Dong Hoi. Speaking at the presentation ceremony held in Binh Tri Thien Province on 23 September, Miguel Martinez Sosa expressed his gratitude to the Communist Party and the State of Vietnam for the award which he described as an honor for all the Cuban specialists engaged in the construction of the Dong Hoi hospital. [Text] [OW010635 Hanoi VNA in English 1452 GMT 25 Sep 81]

HANOI ARMY DAY RECEPTION--Hanoi, VNA, 6 October--Czechoslovak Military Attache Colonel Pravomil Resch gave a reception here tonight to celebrate the 37th anniversary of the Czechoslovak People's Army. Present were Deputy Defence Minister Lieutenant General Tran Van Quang, Deputy Foreign Minister Hoang Luong, and other Vietnamese officials. Members of the diplomatic corps in Hanoi are also present. Toasts were raised to the constant development of the militant solidarity and fraternal friendship between the peoples and armed forces of Vietnam and Czechoslovakia. A meeting for the same purpose has been held by the Vietnam People's Air Force Command. [Text] [OW061551 Hanoi VNA in English 1534 GMT 6 Oct 81]

COOPERATION ACCORD SIGNED IN PRAGUE--Hanoi, VNA, 7 October--A Vietnamese-Czechoslovak agreement on scientific and technical cooperation from now to 1990 and a programme for cooperation for 1981-1985 have been signed in Prague. The signatories were Le Khac, head of the Vietnamese State Commission for Sciences and Technology, and Ladislav Supka, minister of technical and investments development of Czechoslovakia. During his stay in Czechoslovakia, Le Khac was received by Rudolf Rohlicek, vice-premier and president of the Czechoslovak section of the Czechoslovak-Vietnamese Commission for Scientific and Technical cooperation. [Text] [OW071533 Hanoi VNA in English 1501 GMT 7 Oct 81]

UNICEF DELEGATION VISITS, HOLDS TALKS--Hanoi, VNA, 7 October--A delegation of the United Nations Children's Fund (UNICEF) led by its vice-director general, Charles Egger, has paid a week-long visit to Vietnam. While here, the delegation called at establishments built with UNICEF's assistance, the guests also met with officials from various serivces involved in UNICEF's aid programme for Vietnam for the period 1983-86. At a meeting with the delegation on 3 October, Vice-Chairman of the Council of Ministers Tran Quynh expressed his gratitude for UNICEF's aid and his hope for further cooperation between the two sides. [Text] [OW071545 Hanoi VNA in English 1525 GMT 7 Oct 81]

AMITY ASSOCIATION HOLDS 6TH CONGRESS--Hanoi, VNA, 8 October--The Federal Republic of Germany-Vietnam Friendship Association has held its Sixth Annual Congress with the participation of more than 100 branch representatives and Vietnamese Ambassador Nguyen Tuan Lieu to the F.R.G. Fessor E. Ulff [as received], president of the association, reveiwed its past work and announced a plan for next year to step up the movement for solidarity and assistance to the Vietnamese people. He condemned the collusion between China, the United States and other reactionary forces against Vietnam. In its resolution, the congress pointed out that the Sino-U.S. collusion was a danger to the independence and sovereignty of the Indochinese countries and to peace and stability in the whole of Southeast Asia. [Text] [OW080837 Hanoi VNA in English 0701 GMT 8 Oct 81]

10-DAY VISIT, MONGOLIAN PARTY ADVISER--Hanoi, VNA, 9 October--A. Nama, adviser to the Commission for Ideological work and lecturer, of the People's Revolutionary Party of Mongolia Central Committee, has paid a ten-day visit here. He visited the house of the late President Ho Chi Minh in Hanoi, and gave talks at several localities on the revolution of the 18th P.R.P.M. Congress. [Sentence as received] The lecturer was received by Hoang Tung, member of the Communist Party of Vietnam Central Committee and head of the party commission for propaganda and training. [Text] [OW091756 Hanoi VNA in English 1450 GMT 9 Oct 81]

ENVOY VISITS LUXEMBOURG CPCC--Hanoi, VNA, 9 October--Ambassador Mai Van Bo on 5 October called on the Central Committee of the Luxembourg Communist Party on the occasion of his accreditation to the Grand Duchy of Luxembourg. He was cordially received by L.C.P. Chairman Rene Urbany, who expressed the warm feelings and consistent support of Luxembourg communists and workers for the Vietnamese people in socialist construction and in defending Vietnam from sinister schemes of Chinese expansionism, U.S. imperialism and other reactionary forces. Rene Urbany voiced full support for the correct proposals of the three Indochinese countries for the settlement of issues pertaining to Indochina and Southeast Asia. [Text] [OW090713 Hanoi VNA in English 0701 GMT 9 Oct 81]

JAMAICAN PEOPLE'S PARTY CONGRESS GREATED--Hanoi, VNA, 9 October--The Central Committee of the Communist Party of Vietnam today sent a message of greetings to the 43d Congress of the Jamaican People's National Party. The message praises JPNP's untiring efforts in the struggle against North American imperialism and its agents, for the people's independence, sovereignty, democracy and welfare, and for peace and security in the Caribbean. It wishes for the constant consolidation and development of the militant solidarity between the two parties and peoples. [Text] [OW090323 Hanoi VNA in English 0255 GMT 9 Oct 81]

DONG, GANDHI EXCHANGE GREETINGS--Hanoi, VNA, 10 October--Mrs Indira Gandhi, prime minister of the Republic of India, on 9 October sent the following message to chairman of the Council of Ministers Pham Van Dong: "When overflying Vietnamese territory on my way home, I convey to your excellency warm wishes for your good health and for the welfare and progress of the friendly government and people of Vietnam. I am sure that the existing close relations will be further strengthened in the years ahead." Following is Premier Pham Van Dong's message of reply: "I would like to convey to you my warmest greetings and sincere thanks for the fine sentiments and resolute support your excellency, the Indian Government and people have extended to our just cause. May the friendship and multi-sided cooperation between our two countries be consolidated and developed with every passing day. Please accept, excellency, my best wishes for the prosperity and happiness of the Indian people and for your good health." [Text] [OW101631 Hanoi VNA in English 1530 GMT 10 Oct 81]

AIR SERVICE--Hanoi, VNA, 10 October--An air route between Ho Chi Minh City and Sofia, the second of the city to the outside world, will open on 12 October 1981, it was announced at a press conference held recently in Ho Chi Minh City by representative of the Vietnam General Department for Civil Aviation and the Balkan Airline. It will be serviced by T-154 jet liners capable of carrying 160 passengers. There will be a flight weekly every Sunday from Sofia to Ho Chi Minh City and vice versa. [Text] [OW101617 Hanoi VNA in English 1521 GMT 10 Oct 81]

CULTURAL WEEK IN CZECHOSLOVAKIA--Hanoi, VNA, 13 October--A "cultural week in honour of Vietnam-Czechoslovakia friendship" was observed in Olomouc, Czechoslovakia, from 7-12 October to conclude a drive of cultural activities in celebration of Vietnam's 36th National Day. During the week, Vietnamese films were screened, talks on Vietnam were held and photographs of Vietnamese land and people were exhibited in schools, libraries and factories in the Czechoslovak city. Vietnamese Ambassador to Czechoslovakia Nguyen Tien Thong attended the opening of a photo exhibition of Vientam at the Olomouc Medical College on 7 October. [Text] [OW131800 Hanoi VNA in English 1459 GMT 13 Oct 81]

ENVOY IN LUXEMBOURG--On 7 October, after SRV Ambassador Mai Van Bo to the grand duchy of Luxembourg presented his credentials, Grand Duke Jean had a cordial talk with him, expressing the hope that the relations of friendship and cooperation between the two peoples and governments of Vietnam and Luxembourg will be finely developed in the interest of the peoples of both countries. [Text] [OW111105 Hanoi Domestic Service in Vietnamese 1430 GMT 9 Oct 81]

SOCIALIST SPORTS CONFERENCE DELEGATION--Hanoi, 10 Oct (VNA)--A delegation led by Mai Van Muon, deputy head of the General Department for Physical Culture and sports, left here today for the second conference of sports organisations of socialist countries to be held in Varna (Bulgaria) from 12 to 16 October. [Text] [OW111105 Hanoi VNA in English 1522 GMT 10 Oct 81]

BULGARIAN MUSIC PERFORMANCE--Hanoi, 8 Oct (VNA)--The Bulgarian Diane Express Orchestra gave its premiere at the municipal theatre here tonight. Its audience included minister of culture Nguyen Van Hieu, vice-president of the Vietnam committee for the celebration of the 1300th anniversary of the Bulgarian state; Vice Foreign Minister Hoang Anh Tuan; Bulgarian Ambassador Filip Markov; and other members of the diplomatic corps in Hanoi. The Bulgarian artists won warm applause for their 14-item program. The ensemble is scheduled to perform in Ho Chi Minh City and Bac Thai Province as well. [Text] [OW111105 Hanoi VNA in English 1458 GMT 8 Oct 81]

SOLIDARITY WITH SOUTH AFRICANS--Hanoi, 10 Oct (VNA)--The Vietnam Committee for Afro-Asian peoples solidarity has sent a message to the African National Congress on the international day for solidarity with the South African political prisoners. "The Vietnamese people are very indignant at and energetically condemn the South African apartheid authorities for continuing to repress, terrorize and detain South African patriots who have valiantly struggled against the Botha racist regime for their legitimate fundamental national rights," the message says. It demands that Pretoria release all these South African patriots, and stresses, "together with all people of independence and freedom, we firmly believe that the just struggle conducted by the South African people for national independence, equality and social progress under the leadership of the African National Congress will be successful." [Text] [OW111105 Hanoi VNA in English 1501 GMT 10 Oct 81]

AFFORESTATION IN SOUTH--Hanoi, 8 Oct (VNA)--Logging camps in the Mekong River Delta Province of Ben Tre this year have planted more than 1,000 hectares of forest. The province has produced 500,000 saplings for planting this rainy season. In a tree-planting drive, the province has lined the roads with 2.5 million shade and fruit trees. Long An, another province in the Meking River Delta, has replanted 300 hectares of defoliated Cajeput forest. In Duyen Hai, a suburban district of Ho Chi Minh City, 3,000 hectares of virgin land have been cleared over the past 3 months. Half of the area was put under mangroves. [OW111105 Hanoi VNA in English 0312 GMT 8 Oct 81]

BAC THAI ROAD CONSTRUCTION--Hanoi, 8 Oct (VNA)--Nearly 1,000 kilometers of rural roads were built in the mountainous province of Bac Thai, North of Hanoi, in the 5 years from 1976 to 1980. The new roads, many of them leading to newly opened lands, were built mostly with voluntary contributions in materials and manpower from the local population. Bac Thai has also completed eight simple suspension bridges across rivers and streams. Some districts have combined roadbuilding with the expansion of irrigation works and the reshaping of fields. The local people have made more than 13,000 simple means of transport, consisting chiefly of oxen- or horse-drawn carts. [Text] [OW111105 Hanoi VNA in English 0310 GMT 8 Oct 81]

COUNCIL OF MINISTERS DECISION ON CITY WARD ADMINISTRATION

BK210902 Hanoi NHAN DAN in Vietnamese 2 Oct 81 p 1

[Text] The Council of Ministers recently issued a decision on the functions, tasks and organization of the administrative apparatus at the city ward level. The decision points out:

The city ward is a grassroots municipal administrative unit set up to cover an area of the city's main streets with a population of approximately 7,000-10,000.

The principal function of the administrative apparatus at the city ward level is to conduct state administrative and social management and care for and serve the local populace.

Under the guidance of the immediate higher people's committee, the city ward people's committee organizes and performs the following duties:

1. Political duties: Organize and mobilize the people in the ward to implement the party's policies and lines and the state law.

2. National defense and security: Struggle against all plots of the counterrevolutionaries and other criminals, suppress saboteurs, administer and educate political and criminal targets or recommend their rehabilitation to the higher authorities, assure political security and social order and security, eradicate social evils and oppose negativism and enemy psychological warfare.

--Adopt measures to protect the socialist assets and the people's property.

--Reconcile civil disputes.

--Build the civil and self-defense forces in the ward, ensure the fulfillment of military obligations and implement the local army logistics unit.

--Perform the people's task of inspection, promptly detect and report all violations of the socialist law to the higher authorities and handle all law violations within their jurisdiction.

3. With regard to the management of the population and society:

--Register births, deaths and marriages.

--Authenticate applications, police records, housing status certificates, food ration coupons, and so forth.

--Organize and care for the people's material and cultural lives and the disease prevention and control.

--Promptly settle or report the people's claims, complaints and petitions to the higher authorities for settlement.

4. With regard to labor management:

--Fulfill all labor norms, arrange jobs for all labor-fit people or report cases of unemployment to the higher authorities for solution.

--Organize and guide the people in accelerating production in various handicrafts, artisan industry and service sectors as planned, and organize and implement some of the city economic management tasks as assigned by higher authorities.

5. With respect to industry, trade and tax management:

--Implement the regulations on registering industrial and trade business and cooperate with the immediate higher people's committee in issuing business licenses and organizing and managing the individuals and corporations engaged in handicraft and artisan industry production, transportation and other jobs and professions as assigned.

--Organize and implement the tasks of socialist transformation and market management, oppose hoarding, contraband and illicit trade while transforming small merchants and organizing and managing the cooperatives of consumers and services and self-employers, and administer and transform small markets.

--Supervise the retail shops and outlets in the ward to ensure fair and convenient distribution of commodities to the people.

--Participate in the determination of taxes and the collection of industrial and trade taxes, and directly collect the slaughter tax, fees and other items of revenues.

6. With respect to culture, education and public health:

--Organize and carry out a new civilized lifestyle and new cultural family life pattern, and implement all tasks concerning culture, information broadcasting, education, nurseries, kindergartens, public health, sanitation, birth control, sports and physical training, war invalids and social welfare; educate youth and administer all the cultural, educational and entertainment installations in the ward.

--Supervise and participate in the issuance of licenses to freelance cultural workers and cultural and professional class organizers in accordance with the state regulations.

7. With regard to land and housing management:

--Supervise the construction, repair and use of houses and land; build houses and make suggestions concerning the distribution of houses to the people in the ward.

--With respect to those wards which still have some agricultural and forestry land for production, these ward authorities should manage these areas of production like village authorities.

8. Concerning plans and budget:

--Participate in the formulation of plans and organize and implement plans and financial operations as assigned by the higher authorities.

Concerning the organization of the city ward people's committee, the Council of Ministers decision specifies:

The ward people's committee is composed of seven members including the chairman, his deputy and secretary and four other members. The permanent elements of the committee include the chairman and his deputy and secretary.

The ward people's committee chairman provides overall leadership and directly takes care of the ward's administrative affairs, people's livelihood, taxation, market management and socialist transformation.

The committee's deputy chairman, secretary and other members will be assigned other duties as appropriate.

Directly under the city ward people's committee are street population cells, work teams and special subcommittees run by the ward people who volunteer to participate in the overall management of streets under the direct control of the ward people's committee.

This decision will be implemented in all city wards throughout the country effective with publication. In Ho Chi Minh City in particular, the decision will be implemented on a trial basis in accordance with Decision No 53-QDUB which was issued by the city people's committee on 20 March 1981. All previous regulations contrary to this decision will be void.

TWO NEW DISTRICTS IN DAC LAC PROVINCE

BK160957 Hanoi NHAN DAN in Vietnamese 24 Sep 81 p 4

[VNA report]

[Text] The Council of Ministers recently decided to establish two new districts and adjust the territorial boundaries of Buon Ma Thuoc City and Krong Pac District (Dac Lac Province) as follows:

A new district called Krong Ana will be established to include the villages of Ea Bong, Ea Na, Ea Tien and Quang Dien--which formerly belonged to Buon Ma Thuoc City--and the villages of Hiep Hoa, Ea Bhok and Ea Ktur--which formerly belonged to Krong Pac District. The new district's main office will be located in Ea Bong village.

The boundaries of this new district will be as follows: It borders in the north on Buon Ma Thuoc City and Krong Pac District, in the south on Lac District, in the east on Krong Pac District, and in the west on Dac Min District.

Another new district called Krong Bong will be established to include the villages Ea Trul, Hoa Son, Khue Ngoc Dien, Krong Bong, Hoa Le, Hoa Phong, Hoa Tan, Hoa Thanh, Cu Kty and Ea Yieng--which formerly belonged to Krong Pac District—with its main office located at Khue Ngoc Dien village.

The boundaries of this new district will be as follows: It borders in the north on Krong Pac District, in the south on Lac District [Dac Lac Province] and Lac Duong District of Lam Dong Province, in the east on Mo Drac District [Dac Lac Province] and Dien Khanh District of Phu Khanh Province, and in the west on Krong Ana District.

Also according to this decision, the Council of Ministers has adjusted the territorial boundaries of Buon Ma Thuoc City and Krong Pac District.

CONFERENCE HELD ON STRUGGLE AGAINST DECADENCE

BK200756 Hanoi NHAN DAN in Vietnamese 25 Sep 81 p 1

[Text] A conference was recently held in Ho Chi Minh City by the personnel in charge of training, education, culture and arts in the provinces, cities and special zones from Thuan Hai Province southward. The conference was convened to draw upon the experiences of the past 5 months in coordinating the struggle against decadent and reactionary culture and to build a revolutionary culture in order to step up this struggle continually and vigorously in the new stage.

The conference was cochaired by Vo Van Kiet, alternate member of the VCP Central Committee Political Bureau and secretary of the Ho Chi Minh City party committee, and by Minister of Culture Nguyen Van Hieu.

The greatest result recorded during this phase of struggle was that large numbers of cadres, party members and people have become increasingly aware of the importance and complexity of the ideological and cultural revolution in the process of conducting the three revolutions in those localities where the five economic elements still exist and at a time when the enemy is resorting to plots and acts of comprehensive sabotage against us.

The party's policy has been broadly supported by all sectors and circles and has sparked a mass movement. The struggle has been staged on both fronts--opposition and construction--in nearly all provinces, cities and special zones in an effort to resolutely wipe out all that is reactionary and backward while urgently and positively bringing new elements to the cultural and spiritual activities of the people.

The conferees set forth new programs for cooperation among various localities and stressed the role of Ho Chi Minh City and the central cultural units stationed in the city in such operations as broadcasting, research, the performing arts, training, fostering cultural and artistic centers and building a mass artistic movement.

QUESTION OF ISSUING CARDS TO UNFIT VCP MEMBERS RAISED

Hanoi NHAN DAN in Vietnamese 19 Sep 81 p 1

[Article: "Ensuring Completion of Issuing VCP Membership Cards"]

[Text] The party organizations are urgently completing issuing party membership cards. These last phases of the card-issuing job are taking place in many weak installations and must at the same time resolve in a resolute manner quite a great deal of cases that have been postponed from the previous phases. Therefore, considering such cases and drawing conclusions are encountering many difficulties and thus requiring a tight leadership and a thorough understanding of the standards.

Some party installations have the wrong tendency to do the job very quickly and superficially in order to finish it early, thus disregarding the quality of their work. There are installations that have not yet been consolidated, but members are being issued cards anyway. In other places, district VCP committees have decided to issue cards even in the installations that are having serious problems. In the consideration of membership eligibility, there exists the phenomenon of being indulgent and lowering standards. In units in a number of sectors where there are many negative signs, the numbers of party members having been recognized as being qualified for accepting cards all reach the high percentages of 80-90 or more. These results do not truly reflect the state of the party members' ranks in such installations. A check of many basic party organizations where cards have been issued shows that in almost all of them there still are party members who are of no usefulness because they are no better than the common people outside of the party. In the case of a number of party members who had been issued cards, as they appeared unfit, their cards have been revoked.

The purpose of issuing cards is to raise the quality of party members, to raise the fighting power of party organizations, to make members clean and strong and to satisfy the new needs of the revolutionary undertaking. Therefore, it is necessary to eliminate from the party organizations those who have become backward and deviant and are no longer qualified as party members.

The strength of party organizations lies in the quality of every party member. The party has issued a directive requiring expelling from the party "those who have obviously violated the political standards; those who have acts of disorganization, indiscipline and irresponsibility as they refuse to implement or deliberately implement wrongly the party policies and the state laws; those who cause serious division; those who have become backward and deviant and have abused their positions and authority to steal, to accept bribes, to commit acts of reprisals against good people and oppress the masses; those whose revolutionary fighting will has declined and who refuse to carry out party resolutions, are no longer effective as leaders and no longer enjoy the trust of the masses; those whose political understanding is too poor and who have made no progress after being educated and blame the objective conditions for their failure to fulfill the assigned task; and those who have given up party activities without any legitimate reasons." The many recent cases of delaying the issuance of cards actually were due to rightist tendencies and the failure to resolutely and immediately expel the unfit members from the party.

We must have tight control over our own ranks, strengthen education to raise the qualities and qualifications of party members, make every communist party member truly become a revolutionary combatant and vanguard in the socialist construction and defense of the fatherland, attract outstanding people into the party and at the same time resolutely expel from the party those who do not have the qualifications of party members.

DECISION ON VILLAGE ADMINISTRATION TASKS

OW191353 Hanoi Domestic Service in Vietnamese 1430 GMT 18 Oct 81

[Text] The Council of Ministers has just issued a decision on the function, tasks and organization of the village-level administrative apparatus as follows:

The village is the state's grassroots administrative unit in the rural area. The village-level state administration includes the village people's council and people's committee. Elected by the people according to the constitution and the law, it is the state governing agency in the village.

The village-level administration has the function of managing all state activities in the village in order to ensure that the constitution and the law are respected and strictly observed in the region, thus guaranteeing and developing the working people's right of collective mastery, assuring the citizen's rights and caring for the material and cultural life of the people in the village. It should motivate all citizens in the village to fulfill their obligations toward the state.

After outlining the tasks and powers of the village-level state administration, the decision points out:

The village people's council is the state power agency in the village. It works according to the conference system, meeting once every quarter, but may hold extraordinary meetings when necessary. It discusses and decides on measures aimed at ensuring strict observation of the constitution and the law in the region and on important activities relating to the village plan and budget and relating to obligations and rights affecting the local people's day-to-day life, sentiments and customs. The people's council's resolutions must be passed by a majority of votes.

The village people's council supervises the implementation of tasks assigned to the village people's committee and special committees of the village. The village people's committee and special committees must seriously answer the questions posed by the members of the village people's council.

The members of the village people's council must implement in an exemplary manner and are expected to motivate the local people to strictly implement the party policies, the state laws, the higher-level administrative agencies' instructions and resolutions and the village people's council's resolutions.

The village people's committee is the executive agency of the village people's council and the state administrative agency in the village. It is responsible to the village people's council and the higher-level state administrative agencies for all aspects of tasks assigned to it.

The village people's committee works according to the principle of collective leadership and division of responsibility. Each member of the village people's committee has common responsibility for the committee's activities and is responsible for the tasks assigned him by the collective.

VCP CC SECRETARIAT DIRECTIVE ON COLLECTIVIZED PEASANTS

BK171612 Hanoi Domestic Service in Vietnamese 2300 GMT 16 Oct 81

[Text] The party Central Committee Secretariat recently issued a directive to strengthen the leadership of various party committee echelons over the organization and operation of the Vietnam Association of Collectivized Peasants.

The directive says: To ensure the unified organization and operation of collectivized peasants associations throughout the country, the Secretariat has decided to publish the bylaws of the Vietnam Association of Collectivized Peasants. The bylaws stipulate the nature, purpose and mission of the association and its organizations at various levels and in various primary production installations. The stipulations are standing procedures for the organization and operation of the association.

All party committee echelons must strengthen their leadership and guidance over the organization and operation of collectivized peasants associations in order to vigorously develop the peasants' collective mastery. They must struggle to successfully implement all the revolutionary tasks in the new stage and make all the cadres and party members and the laboring peasants throughout the country thoroughly understand this directive and the bylaws of the Vietnam Association of Collectivized Peasants.

Members of the party committee echelons and qualified cadres should be appointed to assume these tasks. At the central, provincial and district levels, a council of the Association of Collectivized Peasants should be established. The standing agency of this council in connection with the party's agricultural committee constitutes a part and parcel of the central, provincial and city agricultural committees in both the north and south.

At the district level, the member of the district party standing committee who is in charge of agriculture must be appointed to directly chair the Association of Collectivized Peasants. He must be assisted by some qualified cadres who assume the routine work of the association.

NEW ADMINISTRATIVE UNITS IN QUANG NAM-DANANG

BK151253 Hanoi NHAN DAN in Vietnamese 26 Sep 81 p 4

[Text] The Council of Ministers recently decided to establish the following new administrative units in Quang Nam-Danang Province:

Binh Nguyen village (Thang Binh District) will be divided into Ha Lam town and Binh Nguyen village.

Dien Minh village (Dien Ban District) will be divided into Vinh Dien town and Dien Minh village.

Zo Nong village (Giang District) will be disbanded to establish Thanh My town. The remaining two hamlets of Zo Nong village will be merged into Ca Dy village of the same district.

Tien Tra village (Tra My District) will be disbanded to establish Tra My town.

Tien Ky village (Tien Phuoc District) will be turned into Tien Ky town.

The Council of Ministers has also decided to establish and adjust the boundaries of some village-level administrative units in Tra My, Tien Phuoc, Que Son, Phuoc Son and Hoa Vang Districts of Quang Nam-Danang Province.

QUALITY CONTROL TO BE VITAL PART OF ECONOMIC MANAGEMENT

Hanoi NHAN DAN in Vietnamese 19 Sep 81 p 1

[Editorial: "Product Quality"]

[Text] Product quality is a constant concern of consumers and a severe requirement of producers. In the recent past, in the situation of production encountering difficulties, many production installations were still trying to stabilize and improve product quality. Beside the products that received the grade 1 seal from the state, other lines of goods such as transformers made by the Hanoi Tranformer Plant, water pumps by the Hai Duong Pump Manufacturing Plant, various kinds of lathes, drills and planes by Machine Tools Factory No 1, etc. still satisfied the specified quality norms. From means of production to consumer goods, every sector did have products that reached considerable quality level. The progress that has been made is commendable, but it is far from stable and steady. There still are very many goods, mostly consumer goods, the quality of which is declining. The quality norms for many products used as important means of production usually are not stable. Coal for production is still mixed with unwanted materials and soil and rock fragments. The quality of electric power has declined in both frequency and voltage. About building materials, the percentage of grade A bricks and tiles usually is lower than what the plan calls for. About consumer goods, the quality of many kinds of goods, including cotton materials, writing paper, towels, bicycle tires, light bulbs, etc., has gone down. Grain and foods show in distribution the phenomenon of losing quality: rice contains grains of paddy and gravel, with the proportion of paddy being sometimes 10-15 times the authorized one; vermicelli tends to become sour and lumpy because it has not been thoroughly dried; tea and tobacco are damp and affected with mildew; moisture in sugar is too high, etc. While a shortage of goods exists, some collective production installations, mostly individuals, have brought to the market many products that satisfy no quality standards and have very low use value; they do not include the counterfeit goods that sometimes endanger consumers' health and lives. That is a tremendous waste.

In addition to stepping up production, the control and management of product quality must be effectively carried out in every sector, locality and production installation. "We better have few but good products" or "we better have few than have none" -- these are two different ways to deal with the question. There is no conflict between the needs for quantity and quality. Quality standards for a product are always determined on the basis of actual production conditions, mostly in connection with materials, raw materials, industrial program, technical knowledge and occupational skills of workers. If these material production conditions are poor while the need for quality is set at a high level, it will be impossible to attain these standards no matter how few the products to be made are. On the contrary, if because of the need for large quantities the quality standards are disregarded, what will unavoidably happen is the fact that we make a lot of products but can use only a few of them and that products wear out quickly and bring no use value to society while we waste raw materials and energy. The correct view on production is the one that is clearly stated in the resolution of the 6th Plenum of the VCP Central Committee, namely, "pay attention to both quantity and quality, strive to attain the quantity and quality that our practical abilities allow us to have and avoid working carelessly and sloppily, causing waste of raw materials and creating bad habits in production and management." While we do our best to encourage the use of domestic materials and raw materials and the more common materials in the place of the precious and rare ones and to exploit both manual and semimechanized capacities to make more consumer goods, we cannot have too high a demand for quality. As for the products that are made under unchanged material production conditions, there is no reason to lower the quality norms. Any decline of quality because of cuts of materials and raw materials, abandoning of technical program, careless and sloppy work or shortcomings in storage and transportation is undefensible.

The management of quality of products and goods must truly become an important economic management standard. We must reorganize and strengthen all three major aspects of our work: standardization, measures and control. In the state plan, the quality norms are regulation ones for production installations and circulation organs as well; unless they are fulfilled, the state plan cannot be considered completed. Such economic measures as the policies about wages, bonuses and prices must have appropriate encouragement in terms of quality, to make it clear that those who make a lot of better goods will get more profit than those who make poor-quality goods. Market management includes the task of eliminating from commerce any counterfeit goods and properly dealing with those who make and circulate such goods. Our efforts must be directed toward stabilizing and gradually improving the quality of products and goods even in the present situation and satisfying better and better the people's needs.

NEW EXCHANGE RATES FOR VIETNAMESE DONG

Paris DOAN KET in Vietnamese 19 Sep 81 p 8

[Text] Effective 6 July 1981, the Vietnamese State Bank has readjusted the official exchange rates between the capitalist countries' monetary units and the Vietnamese dong as follows:

-1 French franc equals 1.579 Vietnamese dong.*
-1 U.S. dollar equals 9.000 Vietnamese dong.
-1 British sterling equals 17.577 Vietnamese dong.
-1 Swiss franc equals 4.443 Vietnamese dong.
-1 West German mark equals 3.782 Vietnamese dong.
-1 Hongkong dollar equals 1.610 Vietnamese dong.
-1 Japanese yen equals 3.998 Vietnamese dong.

According to the market situation, the abovementioned rates will be sometimes adjusted slightly. If the adjustment is substantial, we will notify readers.

In fact, the abovementioned decision tantamounts to a devaluation of the Vietnamese dong or is, in other words, a move aimed at bringing the official exchange rates closer to the actual ones. With regard to overseas Vietnamese, the decision will have the effect of encouraging them to send money gifts to their relatives at home through the agency of the Vietnam Foreign Trade Bank. Indeed, instead of fetching only 0.53 Vietnamese dong as in the past, a French franc now brings in 1.579 Vietnamese dong--not to speak of a "reward".

Also, as of 6 July 1981, when sending money to their relatives at home or when going home for a visit and exchanging foreign currencies at the Foreign Trade Bank, overseas Vietnamese will receive an allowance usually called "reward" which will amount to:

---

*[DOAN KET footnote]: This is the "buying price" of the Bank--that is, the rate to be applied when we give foreign currency to the bank in exchange for Vietnamese currency. Conversely, when customers give it Vietnamese currency in exchange for foreign currency, the Bank will apply a "selling price" at another exchange rate--for example, 1 French franc for 1.595 Vietnamese dong. This is in line with the normal business operation effected by all banks in the world. We do not publish the selling price list here because it does not concern the life of overseas Vietnamese (when they send money home or when they exchange foreign currencies during their visit to the country).

-30 percent if the foreign currency to be exchanged has a value of less than 10,000 Vietnamese dong (by applying the abovementioned exchange rates); and
-40 percent if the foreign currency to be exchanged has a value of 10,000 Vietnamese dong or more.

Here is a concrete example: An overseas Vietnamese sends 1,000 French francs to his relatives at home. Like all other banks, the Vietnam Foreign Trade Bank will take 1 percent for service charge--that is, 10 French francs in this case. The remaining 990 French francs will be exchanged at the official rate as follows:

990 X 1.579 = 1,563.21 Vietnamese dong to which a reward of 30 percent [of 1,563.21 Vietnamese dong] will be added. The total will be 2,032.17 dong.

With the former official exchange rate (1 French franc for 0.53 dong) and the 120 percent reward, the abovementioned sum of money would bring in only 1,154.34 dong.

"Certificates"

Moreover, on receiving money from their relatives abroad through the Foreign Trade Bank, the people at home will be issued a "Foreign Currency Exchange Certificate" which will permit them to buy commodities at special shops.

Following up the abovementioned example, if an overseas Vietnamese sends 1,000 French francs to his relatives at home, the latter will receive 2,032.17 dong together with a certificate stating tht they had exchanged foreign currency valued at 1,563.21 dong (this value being calculated on the basis of the official exchange rate and excluding the 30-percent reward). With this certificate, his relative at home will be entitled to buy import goods or commodities intended for export at the Ben Thanh shop or the "Imex" shops in Ho Chi Minh City. They may buy once or many times until the value of all the goods bought totals exactly 1,563.21 dong.

To avoid misunderstandings and undeserved complaints, we must reiterate that the abovementioned rates (and the figures shown in the example) may be modified according to the market situation. In practice, the Vietnam State Bank usually readjusts the rates once every 6 months or whenever some major change occurs to the international market. In fact, from 6 July to 1 September, the Bank continued to apply the abovementioned rates though the U.S. dollar rate had jumped from 5.7 to 6.00 French francs on the international market.

PHAM VAN DONG SPEAKS TO SUPPLY SECTOR

BK220932 Hanoi Domestic Service in Vietnamese 2300 GMT 21 Oct 81

[Text] On the afternoon of 19 October 1981 the Ministry of Supply held a ceremony to celebrate the 20th anniversary of the Vietnam supply sector. The anniversary falls on 18 October.

In the course of the anniversary celebrations, cadres and workers were very pleased to welcome Council of Ministers Chairman Pham Van Dong who addressed them.

After pointing out the essential and important role of supply in the national economy and commending cadres and office and manual workers of the supply sector for their efforts over the past 20 years, Chairman Pham Van Dong said:

The supply sector must quickly establish an organizational system for the management and trading of materials. This system must include a unified structure for the management of materials from the central down to the grassroots level and must be organized so as to produce the best results.

Touching on the urgent tasks of the supply sector at present, the chairman stressed: The supply sector must struggle harder to stamp out negative phenomena in the sector itself as well as in society so as to gradually do away with the loss, wastage and theft of state-owned materials and property. It must satisfactorily carry out the task of receiving materials and goods imported from other countries and simultaneously must attach great importance to thrift in the supply and use of materials, regarding austerity as a national policy. It must formulate specific plans to stop misuse of materials, especially the misuse of such strategic materials as gasoline, oil, iron and steel.

In conjunction with efforts to strictly economize on the use of materials imported from other countries, the supply sector must quickly study the possibility of organizing the production of various kinds of materials and replacement spare parts domestically in order to meet current demands in production.

The chairman urged the supply sector to concentrate on satisfactorily carrying out the following five tasks during this year and in the years ahead:

--Establish an organizational system for managing the supply and trading of materials, and formulate an appropriate supply plan.

--Apply the system of economic accountancy and profitable trade.

--Work out measures to prevent and gradually do away with theft and waste of materials.

--Formulate plans to economize on the use of materials and evaluate the effect of such plans.

--Prepare programs of activity and targets to be achieved for each specific period by the entire sector.

On behalf of the cadres and workers of the supply sector, Comrade Tran Tam, member of the party Central Committee and minister of supply, promised Council of Ministers Chairman Pham Van Dong that they would strive to develop past achievements, overcome and positively correct existing shortcomings, and satisfactorily implement what the chairman had instructed so as to improve the management and supply of materials and satisfactorily serve production, combat and the people's livelihood.

AGRICULTURAL PRODUCTS PRICE POLICY DECISION

BK131140 Hanoi Domestic Service in Vietnamese 0400 GMT 10 Oct 81

[Text] On 26 September, the Council of Ministers issued Decision No 95-HDBT on the purchasing prices of agricultural products and the selling prices of production materials applied to collective and family economies in the north, the provinces along the southern Trung Bo coastline and in the central highlands.

The Council of Ministers points out the following guidelines and principles for the implementation of purchasing prices of various kinds of agricultural products:

1. Purchasing prices of agricultural products must be determined within the general framework of the national economy aimed at achieving increased production; encouraging agricultural cooperatives, production collectives and peasants to sell more products to the state; accelerating the movement for agricultural cooperativization; and consolidating new production relations in the rural areas.

2. Purchasing prices must be linked reasonably to production output and production costs so as to enable the producers to cover all the expenses involved in production fully and earn profits accordingly.

3. Efforts must be made to ensure a reasonable rate of exchange between the purchase prices of agricultural products and the prices of production materials and consumer goods sold to the peasants by the state on the general principle that the state will not be compelled to absorb losses while agricultural cooperatives, production collectives and the peasants get their profits.

4. The purchase prices of paddy in the northern provinces, the provinces along the southern Trung Bo coastline and in the central highlands must be based on those in the Red River Delta region in order to ensure reasonable price differentials among various regions due to different production conditions in terms of land, water and weather in each region. It is also necessary to use the purchase prices of paddy and the production costs of each kind of agricultural product in a rational manner in fixing the purchase prices of such subsidiary crops as dried sweet potatoes and manioc and other agricultural products used as raw materials for industry and for the production of export goods within the framework of a reasonable rate of exchange among various kinds of crops in different regions.

5. The state will apply a two-price policy for the purchase of agricultural products in the localities mentioned above. It will purchase these products

within set quotas at directed or fixed prices and beyond the obligation norm at agreed-upon prices.

The purchase prices of various kinds of agricultural products are as follows:

1. Purchase prices of grain within set quotas.

A. Purchase prices of paddy:

In Zone One--including Thai Binh, Hai Hung, Ha Nam Ninh and Ha Son Binh Provinces, with the exception of former Hoa Binh and Hanoi and Haiphong City--prices will be adjusted from 0.52 or 0.56 dong per kg at present to 2.50 dong or to 2.75 dong in localities where production is facing difficulties.

In Zone Two--including Vinh Phu, Ha Bac and Thanh Hoa Provinces--prices will be adjusted from 0.56 or 0.60 dong per kg at present to 2.75-3.00 dong.

In Zone Three, including the provinces from Nghe Tinh to Thuan Hai--prices will be adjusted from 0.60 or 0.65 dong per kg at present to 3.00-3.30 dong or up to 3.50 dong in localities encountering great difficulties.

Zone Four--including provinces in the mountainous region and localities in the highland areas of the provinces belonging to the three above-mentioned zones--prices will be adjusted from 0.65 or 0.72 dong per kg at present to 3.30-3.50 dong.

B. The purchase prices of dried corn, sweet potato and manioc:

Purchase prices of corn will be adjusted from 0.65 per kg at present to 3.20 in Nghe Tinh and other localities in the mountainous region and from 0.58 dong per kg at present to 2.75 dong in the Red River Delta region and localities.

The purchase prices of dried sweet potato will be adjusted from 0.65 dong per kg to 2.70 or 3.20 dong, depending on production conditions and the habit of consumption of subsidiary crops in each zone.

The purchase prices of dried manioc in each zone--0.75 dong per kg at present--will be increased by 60-120 percent of the paddy prices in that zone, depending on production conditions, production output and quality, that is, whether it can be used for immediate consumption or as raw material for industry.

2. The purchase prices of animal husbandry products within set quotas.

The purchase prices of pork: From 18 to 20 dong per kg for pigs weighing from 40-60 kg per head and an increase of 10 percent of the directed prices for pork purchasing from the grain belts of cities and industrial complexes.

The decision also specifies the purchase prices of other agricultural products within set quotas.

Regarding the selling prices of agricultural production materials according to two-way economic contracts, the decision specifies:

The selling prices of insecticide will be applied in accordance with the State Pricing Commission's Decision No 35/VCNN/TLFX dated 28 August 1981. The wage for plowing land by tractor in areas from Thuan Hai Province northward is 250 dong per hectare. Rates for irrigation and water conservancy services will be announced later.

Regarding organization and supervision of the application of these prices, the decision specifies:

1. The application of these directed or fixed purchase and selling prices must be carried out along with the acceleration of production, improvement of economic management, transformation of socialism, the perfection of socialist production relations in agriculture and the strengthening of market management.

2. The State Pricing Commission, people's committees of provinces and cities and information and propaganda organs must extensively disseminate the contents of this decision to enable peasants and cadres to understand clearly that the state policy of adjusting the purchase prices of agricultural products, the selling prices of production materials and the retail prices of consumer goods is aimed at serving and encouraging production development and appropriately settling the relations between capital accumulation and consumption between the state and peasants and between workers and peasants.

3. On the basis of the standard prices specified in this decision, the State Pricing Commission, in coordination with various ministries, shall handle the purchase and supply of products and fix and announce the purchase and selling prices of specific products according to their quality. Lists of the purchase prices of agricultural products and the selling prices of production materials in each locality must be made public. Localities, state-operated and collective purchasing and supplying organizations must abide by these price lists. They have no right to increase or decrease prices arbitrarily, which may cause losses to the state and the peasants and result in uneven exchange rates between industrial and agricultural products which the state has correctly fixed.

Concerning the differences in prices according to regions, the State Pricing Commission, drawing on the stipulations in the Council of Ministers Resolution No 10-CP of 8 January 1978, advises sectors and localities not to adjust price differences according to regions by themselves. The people's committees of provinces and cities have specifically fixed the agreed-upon purchasing and selling prices within the framework of the Council of Ministers directed prices designed for each crop and locality according to reasonable exchange rates between the purchase prices of agricultural products and the selling prices of production materials. The State Pricing Commission, ministries responsible for the purchase and supply of products and materials and people's committees of all echelons must closely follow up the purchasing and selling activities and review market management and prices in order to correct mistakes and shortcomings promptly and ensure scrupulous implementation of the state's promulgated policy.

4. The new directed or fixed prices specified in this decision are applied to collective and family economies in all localities of the north and provinces along the southern Trung Bo coastline and in the central highlands as of 10 October 1981.

Regarding the products of state farms, ministries and general departments responsible for production management must study and recommend wholesale prices for approval. Pending their approval, the above-mentioned purchasing prices are to be temporarily applied to collective and family economies.

ECONOMIC PLANNING, TRADE AND FINANCE

IMPROVEMENT OF GRAIN DISTRIBUTION

BK091723 Hanoi Domestic Service in Vietnamese 1100 GMT 6 Oct 81

[NHAN DAN 6 October article on the improvement of grain distribution]

[Text] For several years now, despite many difficulties in grain production, the state has made great efforts to ensure the distribution of grain to nonagricultural people according to standardized rations and stabilized prices.

Entering the new revolutionary stage, the economic development becomes a central task along with the urgent requirements for accelerating production and improving the people's livelihood. As the problems of organization and economic management in accordance with the socialist procedures have been raised, the old policy of grain distribution is no longer suitable. The expanded system of rationed distribution has become a widespread system of subsidization seriously tending to egalitarianism, which violates the principle of distribution according to labor, impedes the development of production, interferes with circulation, causes losses in manpower and commodities, creates false demands and a psychology of petty hoarding, and leads to many negative phenomena in the economic and social lives.

The improvement of grain distribution has, therefore, become an urgent requirement. The struggle guideline is to quickly shift from the system of widespread subsidization to a socialist business system. On this basis, we should vigorously develop the role and influence of socialist trade over grain production and consumption, surge forward to resolve the grain problem, and positively contribute to developing the economy under the current 5-year plan. This is a very important and difficult objective fraught with many problems which call for a radical solution which is to vigorously accelerate grain production while enhancing thrift in grain use and the strict management of distribution and circulation. We should ensure that large quantities of grain and commodities are concentrated into the state hands for distribution in a way which is most beneficial to socialist construction and national defense.

The improvement of grain distribution must be aimed at this objective. The following are the specific measures to be taken:

1. Improve the policies, procedures and prices concerning the sales of grain to various consumers and the use of grain in meeting various demands. At a time when the need to balance grain distribution within the state field is still urgent, the grain sector is unable to sell grain regularly to all consumers

and to meet all demands. As a result, we should further oppose widespread subsidization through grain distribution by classifying various objectives and demands in order to properly adopt the policies, procedures and prices concerning each objective and demand.

With regard to workers and civil servants, we should continue to maintain the system of grain distribution according to standardized rations and at the current retail supply prices.

With regard to those people and collectives engaged in fisheries, salt work, planting of vegetables and industrial crops, construction, transportation and handicrafts and artisan industries who have some economic relations with the state through various contracts and orders, and who sell products to the state, they may buy grain from the state at the newly directed retail prices, depending on the extent to which their economic contracts with the state has been filled. When the state changes its grain sales prices, it will also adjust the prices at which it collects, purchases and orders products as appropriate.

With regard to producers, businessmen and other self-employers who have not any economic relations with the state, they will be distributing grain at the commercial prices, depending on the availability of commodities.

2. Concentrate the distribution forces on the main tasks and targets. When we meet with some difficulties in balancing grain distribution, priority in the use of the forces must be given to the most needy objectives, such as the armed forces, workers and civil servants in the most critical areas, major cities, northern border provinces, industrial complexes and vital state construction project sites. Ensuring the distribution of grain to the aforementioned objectives and areas is also of great significance to the stabilization of markets and prices, and bears a good effect on production and the state collection, purchase and control of commodities.

3. Provide price subsidies for office and manual workers in areas capable of solving their own demands for grain without needing grain supplies from the state. Not only is this measure instrumental in reducing the quantities of grain to be supplied and transported by the state, but it is also suitable to the working and living conditions of those people working in the rural areas, as these people and their families have planted grain crops and are able to conveniently purchase grain at the local market.

4. Regularly inspect the distribution of grain to those who are entitled to it in accordance with their requirements. Quickly detect and deal with those cases involving the false declaration of the number of people entitled to grain, and the violation of the state's policies and the system governing grain distribution. It is necessary to struggle against frauds and losses and ensure economical use of grain. As an immediate task, we must closely link such inspections with the current efforts to classify those people who are entitled to grain in various areas. Through the classification we may detect many grain distribution irregularities.

5. Satisfactorily regulate the distribution of grain and closely control the quantities of goods in each phase. With the production and consumption of grain in various areas throughout the country still imbalanced, it is very important for us to achieve a balance between the production and consumption of grain. This must be carried out in a scrupulous and timely manner. We must especially refrain from acting on our own in the implementation of various grain procurement orders. In addition, responsible organizations must closely control and satisfactorily protect the grain stock, both in quantity and quality throughout its purchase, storage, processing, transportation and distribution. They must resolutely prevent and minimize damage, losses and decreasing quality of grain in order to avoid losses for the state and an impact on the consumers. All the above-mentioned managerial measures must be closely linked with efforts to strengthen market management, to struggle against negative phenomena, and to severely punish speculative hoarders and those who have stolen state-owned grain.

6. Improve organization and distribution methods. The grain distribution network must be rearranged and reorganized to suit new policies and methods in order to render convenient services to consumers. All shopping outlets must strive to provide sufficient and regular supplies to consumers, especially to key consumers and areas. They must struggle to ensure the quality of goods for sale and to minimize bureaucratic red tape which is inconvenient for the buyers.

The above measures can only be satisfactorily carried out through the close leadership and guidance of the party committee echelons concerned and the administration at all levels, through the efforts and socialist cooperation of various sectors concerned, especially the grain sector, and through the people's active cooperation and participation.

EDITORIAL URGES STATE TRADE SECTOR TO CONTROL SOURCES OF GOODS

Hanoi NHAN DAN in Vietnamese 17 Sep 81 p 1

[Editorial: "Concentrate Sources of Goods in the State"]

[Text] To help improve distribution and circulation, the socialist commercial sector has made great efforts since the beginning of this year to intensify the purchase of goods and to grasp their sources. In the southern provinces, in particular, fairly satisfactory norms have been achieved in purchasing many kinds of agricultural and food products such as soybeans and other types of beans, unhulled peanuts, pork, tobacco and sugar. For some categories of goods, the norms attained are several times higher than those obtained in the same period last year. The progress made in the purchasing task reflects a production development and simultaneously demonstrates the appropriateness of the purchasing system. Under this system, the exchange of goods between the state and the peasantry has been directly effected at rational and proportional price rates between agricultural and industrial products, thereby ensuring the peasants' benefit while effecting a rapprochement between the prices of agricultural products and those of industrial ones, which will be beneficial to industrial development.

Though having been on the increase, the volume of agricultural products purchased does not yet fulfill the planned requirements and is still small compared with the amount of products and commodities in circulation. In many areas, traders are still buying goods competitively and disturbing the market. Problems relating to the packing and transportation of goods have not yet been solved satisfactorily. Difficulties are still experienced in purchasing industrial goods and controlling their sources. While certain enterprises are infringing discipline in the delivery of products, the commercial organization fails to take energetic and positive measures to grasp the sources of commodities. For various reasons, the buying prices are not yet rational so that the state trade sector sometimes has to buy the same category of product at different prices from enterprises and has even to pay more for a subsidiary, second-quality product or commodity than for a staple, first-quality one.

Overcoming the above-mentioned difficulties and shortcomings, stepping up the purchase of goods and concentrating their sources in the state is a task of prime importance of the commercial sector. Only by grasping the sources of goods can socialist trade become master of the market, plan the circulation of goods and provide enough supplies for cities, industrial zones, manual and office workers and the armed forces.

To master the sources of goods, it is necessary for commercial organizations--both those engaged in purchase and those specialized in wholesale--to apply new buying and selling methods and to completely shift from a pluralistic administrative system to a commercial business mechanism. Instead of doing business for the mere purpose of making a profit, these organizations must aim at fulfilling the role of the entire society's housewife by doing business to accomplish their task of supplying goods and managing the market in order to promote production and the people's life. Acting as a bridge between production and consumption, the commercial sector must not show a passive attitude by waiting for the delivery of goods to start selling them or by selling only the amount of goods at its disposal; on the contrary, it must take the initiative in urging on production, creating sources of goods and purchasing commodities in order to stimulate production development. A regular duty of every trade corporation is to get to thoroughly know the market and consumption needs in order to be able to place orders of goods on the production sector and to practically help create new production capacities; at the same time, it must get in touch with production installations to establish trading relationships and to help them overcome difficulties and obstacles in the production process, thereby actively creating sources of goods and firmly controlling them. An effective method would be to simultaneously apply two formulas--buying according to two-way contracts and buying at agreed prices. Two-way contracts are the principal formula to be applied to cooperatives and production collectives. The more broadly this formula is applied, the more beneficial it will prove because it will turn the exchange of materials and goods between the state and production installations into a stabilized, organized and planned procedure in strict accordance with the price policy.

The dealings in industrial and commercial goods must also be effected by contracts signed with enterprises. The ordering of goods must constantly be expanded and perfected with a view to firmly grasping the sources of goods and to simultaneously ensuring that the products meet ever more satisfactorily the market demands in quantity, quality, standards and types of goods. The small industry and handicraft sector is fully capable of producing consumer goods. To firmly ensure that the sources of goods produced by this sector are exploited, it is necessary to correctly implement policies on prices, raw materials and grains with the aim of encouraging collective and individual organizations to enthusiastically produce and sell goods to the state.

These tasks cannot be satisfactorily fulfilled without a strong organization. Purchasing organizations belonging to the state need be continuously strengthened with regard to both their mechanisms and their material and technical facilities. The task of purchasing goods and grasping their sources must be supported by exercising a tight administrative management over the commercial business activities of individuals, by effectively employing collectivized trade units and by creating conditions for the state trade sector to develop its efficiency and play its leading role.

PRIVATE MERCHANTS' ROLE IN PURCHASING PADDY TO BE MINIMIZED

Hanoi NHAN DAN in Vietnamese 17 Sep 81 p 2

[Article by Tran Van Minh: "Using Private Merchants to Purchase Grains in Hau Giang"]

[Text] Of the total amount of grains purchased every year in Hau Giang, the volume going through the medium of private merchants represents 70 percent and more while the quantity bought directly from peasants is only less than 30 percent. In view of the fact that the contingent of cadres is still insufficient and weak, that the buying network is still undeveloped and that there is still a shortage of material facilities, the grain sector has employed private merchants to buy and collect the rice which the people need to sell. On the other hand, because of a lack of transportation means, peasant households who have five or seven gia [20 kgs each] of paddy and who need to sell them have been obliged to sell through the medium of private merchants in order to save time to do more profitable things.

Actually, grain purchase through the medium of private merchants is quite complicated. When buying from peasants, private merchants usually try to lower the price, to buy on the basis of each gia, to make a distinction between different qualities such as freshness, dryness and the percentage of impurities and to offer different prices. Yet, before delivering grains to the state warehouses, they mix up all types of grain into a single category which they call good-quality grain and sell at the price fixed by the state. In some areas, they dampen paddy by spraying water on it in order to increase its weight and make a profit. Taking advantage of shortcomings in the grain quality control, many private merchants have bribed cadres and connived with them in carrying out fraudulent weighing and in improperly implementing regulations on the control of quality and categorization. They have even tried to find means to send away peasants coming to directly sell paddy to the grain purchase stations. Their usual trick is to have their men stand in a long line in front of grain purchase stations at an early time in order to force peasants having brought in their paddy to wait for a long time. Many peasants who have come to sell five or seven gia of paddy and who have waited all the day long without having their paddy weighed lose their temper and immediately sell their paddy to the private merchants right at the door of the purchase station.

The private merchants' trick of offering low prices to peasants is a widespread practice. After making sure that most peasants will have to sell paddy through their medium, the private merchants resort to another trick to exploit them. While the purchase is in full swing, they slow down the purchase tempo and launch the rumor that "since the buying price set by the state is too low, peasants are unwilling to sell paddy" and that "this is the reason why it is possible to purchase only a small amount of paddy." Because of a frequent failure to carry out the necessary investigations to fully understand the situation, many areas have asked the management agencies at the higher level to raise the price. Seeing that the money disbursed and commodities mobilized by the state cannot catch up with the purchase tempo, private merchants then spend a lot of money buying price at a very low price because they know they can take advantage of the peasants' willingness to sell paddy at a lower price provided cash is paid them immediately.

Apart from the amount of paddy they buy for and sell to the state, private merchants withhold another amount of paddy of fairly good quality, hull it and then sell the rice in the market at a lower price.

Some people say that the grain sector has been able to satisfactorily fulfill the paddy mobilization norm only because it has secured the private merchants' assistance in buying and collecting grain. In reality, making use of the private merchants' activities is an appropriate measure at a time when the purchase network is still thin and unable to meet the requirements of purchase, collection and transportation. But it is unadvisable to protract this situation and to neglect inspection and control. It is necessary to quickly set up purchase stations in villages to purchase and receive grain directly from peasants.

Paddy and rice production in Hau Giang has a commercial character and peasants produce rice with the objective of selling it. If the purchase organizations set up by the state prove convenient, peasants will sell directly to the state without using private merchants as intermediaries. To grasp commodities at their very sources, grain purchase organizations of the state must improve their business activities. In Hau Giang, there are 170 villages each of which can mobilize thousands of tons of paddy on the average each year. Since the Hau Giang grain sector already has 145 fixed purchase teams, it must continue to strengthen and establish a purchase station in each village or associated village to assume the task of collecting and carrying paddy from land to water transportation means and to groups of warehouses subordinate to the district and provincial levels in order to make the current task of mobilizing a large volume of grain effective.

CHAOS, CONFUSION ON HANOI'S MONEY-GO-ROUND

Bangkok BANGKOK POST in English 9 Sep 81 p 4

[Article by Alan Dawson]

[Text]

VIETNAM'S new currency regulations, like many new regulations in many countries, are a bureaucrat's dream and an efficiency manager's nightmare. The rules keep changing, they differ from locality to locality, and the paperwork is incredible.

Vietnamese have been given several conflicting instructions on what they have to do to comply under the new decree laws. Foreign residents have been complaining loudly, often and not only because of the shrunken potential for black market money dealing.

The black market is the main reason for the regulations. In formerly straight Hanoi, the dong-to-dollar rate on the street had risen to more than 40-1, compared with the legal exchange rate of just over 3-1 for individual transactions.

Alarmed that the city was, literally, moving to a dollar-based economy with inflation at an almost immeasurably high rate, the Cabinet last month ordered all Vietnamese and foreigners to turn in their foreign currency, sell and/or register their gold, silver and precious stones; devalued the dong by some 350 per cent to 9.09 to the dollar, and issued a new form of dollar scrip.

From that first announcement in the Hanoi newspaper New Hanoi (a journal circulated only in the capital), confusion began to reign.

One announcement, repeated several times, said that all gold, silver and precious stones had to be sold to the State Bank at prevailing prices. Even stores engaged only in cleaning jewelry would have to apply for special licences.

This was followed by an article in the official communist newspaper Nhan Dan by State Bank officer Pham Ngoc Phong the day before the July 31 deadline for legal sales of the foreign currencies and jewelry. Phong's story said that Vietnamese had to register their gold, silver and diamonds, but would be allowed to keep — with no fear of confiscation, just over an ounce of gold, 11 ounces of silver and three carats of diamonds, a not inconsiderable amount.

To this day, according to travellers from Hanoi, no one is quite sure just what the real rule is.

Vietnamese holding "hard" foreign currency, preferably US dollars, were given half of it in the new scrip for use in foreign-currency shops usually inaccessible to them and the rest in a dong bank deposit at the devalued rate.

Residents report that thousands of Vietnamese mobbed the foreign currency shops on July 30 and 31, beating the deadline for a chance at luxury items such as foreign cigarettes and liquor, canned Coca Cola, radios and tape recorders simply unavailable on the local economy.

For the foreigners there was also chaos, since for goods and services which foreigners have to pay for in dollars — hotels, car rentals, airplane tickets and simply changing money for use on the economy — real US dollars were no longer acceptable.

Instead, they had to exchange their hard currency for Vietnamese "exchange certificates" or "dollar As." A wartime slang left over from the days of the American military's scrip more commonly refers to the "Vietnamese dollars" as red dollars, the colour of the first scrip one-dollar bills used in Saigon.

Here, an incredible bureaucracy that would have had Job raging and pounding a desk, reigned supreme. The first problem, naturally enough, was that there were very few red dollars available.

Regulations on who could get the dollars, and how and where they could be obtained, conflicted seemingly from desk to desk within the banks, government money changing offices, airports, hotels and foreign currency shops authorised to change real dollars for red ones. (Actually, they are green.)

To date, some embassies and other foreign offices have been unable even to pay their staff for two months because of the muddle.

"I suppose they'll get it all worked out in the end," said one Hanoi resident on a short Bangkok vacation. "But in the meantime, it's the most frustrating problem I've ever been involved with."

FOOTNOTE: The red dollars are a bit like travellers' cheques, although even more complicated.

A bank official must sign, stamp and date by hand each of the scrip notes, and the purchaser must also sign when he exchanges.

When the note is actually spent, the user must countersign.

The red dollars are good only for a year from date of issue and it is against the law to remove even one from Vietnam.

The reason for this last regulation is undoubtedly at least partly to try to guard against counterfeiting. The red dollars are on simple paper and look more like a lottery ticket than money.

One unlucky embassy aide was given the task of exchanging 1,000 US dollars for 1,000 red dollars and presented himself at the appropriate bank wicket to complete the deal.

Officially, red dollars come in denominations of 1, 5, 20 and 50 dollars. But the horrified aide found that the bank had only the $1 denominations on hand.

He had to wait for the Vietnamese official to sign, stamp and date each one of the 1,000 bills, and then had to sign — and later countersign when he spent the lot on an embassy bill — each one as well.

ECONOMIC PLANNING, TRADE AND FINANCE

VCTU DIRECTIVE ON SOLVING GRAIN PROBLEM

BK211000 Hanoi NHAN DAN in Vietnamese 4 Oct 81 p 1

[Text] To develop the responsibility of the workers, civil servants and trade unions in the struggle to solve the grain problem, the Vietnam Confederation of Trade Unions [VCTU] on 29 September issued Directive No 18CT-TCD urging trade unions at all levels to carry out satisfactorily the following tasks:

--Conduct propaganda among the workers and civil servants to explain to them that solving the grain problem at present is one of the party's important, urgent and strategic tasks and to make them understand fully all the concrete policies and measures adopted by the party and the state to solve this problem. This is aimed at enabling them to develop their sense of collective mastery so that, together with their families and units, they can contribute positively to the implementation of these policies and measures in their localities.

--Step up the emulation movement among workers and civil servants to support agricultural production in accordance with Resolution No 3 of the VCTU Executive Committee and the guiding plan of the VCTU Secretariat so that, together with the peasant class, they can contribute positively to the fulfillment of all agricultural production plans. Attention must be given on a priority basis to districts and major grain-producing localities.

--Satisfactorily accelerate and launch the movement of workers and civil servants to increase grain and food production and, in the immediate future, to plant winter and winter-spring grain and food crops actively. It is necessary for trade union locals to set production norms in a specific and practical manner so as to help increase the source of grain for their members' families and society alike.

To carry out these tasks, trade unions at all levels should implement Directive No 306/TTG dated 18 November 1980 of the SRV premier--which provided instructions for workers and civil servants to produce part of the grain for their own use--and Plan No 28DS/TCD dated 26 November 1980 of the VCTU--which provided guidance for the movement to increase grain and food production among workers and civil servants.

It is necessary to provide practical guidance so that the emulation movement can be carried out vigorously among the workers and civil servants and in the communications and transportation sector. Efforts should also be made to motivate everyone to help fulfill the grain collection plan satisfactorily and to enhance a sense of responsibility for the struggle to preserve grain against theft, waste, damage and loss while improving the transportation and distribution systems.

Effective from October 1981, instead of supplying them with grain, the Council of Ministers will give cash compensation to workers and civil servants who, having left their families behind in the countryside to take up jobs in the districts and cities, can afford their own grain rations.

It is, therefore, necessary for all provincial and municipal trade union federations and district and city trade unions to grasp the status of the workers and civil servants firmly in order to make suggestions to the party committee and people's committee echelons and sectors concerned in their localities, so that concrete measures can be adopted to settle their problems.

They must avoid giving cash compensation to these workers and civil servants indiscriminately or leaving them without grain at a time when they still cannot afford their own rations. It is also necessary for all these trade union federations and trade unions to participate in assessing grain prices in order to be able to determine cash compensation differentials quickly and settle other matters concerning these workers and civil servants conveniently.

Trade unions at various levels in all localities and sectors should observe the implementation of these policies toward workers and civil servants in their localities, sectors and units closely in order to be able to discover and discuss any difficulties or obstacles with the local party committee and administration echelons and sectors and report them to the higher echelons promptly.

Meanwhile, all provincial and municipal trade union federations and district and city trade unions should guide trade union locals and inspection teams and workers' control committees--those assigned to supervise the protection, transportation, supply and distribution of grain at various establishments of the grain sector--in investigating the cases involving falsified reports on grain stocks at certain state farms and state organs and enterprises, so that efforts can be made to recover stolen grain and legal actions can be taken against any violations.

REPORT ON DEVELOPMENT OF NORTHERN COOPERATIVES

BK121331 Hanoi NHAN DAN in Vietnamese 19 Sep 81 p 1

[VNA report]

[Text] There are now 6,708 agricultural cooperatives in the northern midland and mountain provinces. This figure accounts for 60.5 percent of the total number of cooperatives and one-third of the arable land in the north (excluding nearly 1,800 cooperatives in the mountain areas of the northern delta and former Zone 4 provinces).

In recent years, the cooperativization movement in the northern midlands and mountain areas has made headway in strengthening organization, improving management and maintaining production. Many new factors in management and production organization have emerged and have exerted a positive impact on various localities and grassroots units.

Along with readjusting the scale of cooperatives to a reasonable level and organizing production units on an appropriate scale--thereby creating favorable conditions for cooperatives to stabilize organization quickly, improve management and step up production--the mountain provinces have also provided them with more guidance and have concentrated efforts on strengthening hundreds of weak or inefficient cooperatives and organizing a number of new ones. In Hoang Lien Son Province, 127 cooperatives have been strengthened. In Lang Son Province, more satisfactory efforts in strengthening cooperatives have prompted 90 percent of the peasant households in five of the six border districts to join collective production organizations. In Cao Bang, Lang Son, Hoang Lien Son and Ha Tuyen Provinces, 60 more villages, after satisfactorily strengthening existent cooperatives, have established a number of new ones.

Striking progress has been made by many midland and mountain cooperatives in managerial work. This is the fine result they have obtained in applying product contracts with labor groups and laborers.

Most of the midland and mountain cooperatives implemented product contracts for the 1980-81 5th-month spring crop and the 1981 10th-month crop. More than 1,000 cooperatives in the 6 mountain provinces, or nearly 19 percent of the cooperatives in the north, also applied product contracts.

Generally speaking, the cooperatives which have adopted the new contractual system have obtained good results in many fields and have truly contributed to strengthening themselves, developing production, increasing their members' income, boosting the accumulation of collectives and augmenting their contributions to the state. In the mountain cooperatives in particular, the new contractual system has motivated and encouraged the people of various nationalities to pay attention to the intensive cultivation of wet rice and upland rice, thereby curbing the destruction of forests to create upland fields. For the 1980-81 5th-month crop, the Vinh Hai cooperative in Chiem Hoa, Ha Tuyen Province, applied product contracts with laborers in cultivating all of its rice and corn. As a result, both its rice and corn crops were successful, producing high yields.

Concerning the rice crop in particular, the area planted in rice went up by 16 hectares and its yield, the highest ever obtained by Vinh Hai, represented an increase of 5 quintals over that of the previous crop. It is noteworthy that, as members of the cooperative set aside laborers to carry out intensive cultivation on the contracted ricefields satisfactorily, both the rice and corn crops were successful and their yields were high. This has enabled the cooperative to increase the income of its members and improve their living standards, thus preventing them from turning to private production work for fear of a food shortage. It has also prompted the people of different nationalities in the area to give up the old habit of burning forests to create upland fields.

Thus, the Vinh Hai cooperative has succeeded in preventing its members from abandoning the collective and turning to cultivating their families' upland fields.

Despite scant materials and equipment and despite the difficulties caused by natural calamities and enemy sabotage, many midland and mountain cooperatives, especially the progressive ones, have maintained and even improved production and the living standards of their members.

Many cooperatives have achieved an average annual grain output of approximately 400 kg per capita and some have even produced 500 kg per capita. In a number of cooperatives, subsidiary food crops have accounted for 40-50 percent of the total cultivated area; the amount of grain contributed to the state has reached the level of about 1 ton for every planted hectare; agricultural products such as tea, soybeans, tobacco, sasanqua, tung tree and so forth, have been sold to the state for the first time; the value of a man-day has increased to 1 dong or more, or 1.5 to 2 kg of grain; and the monthly amount of grain distributed for personal consumption has gone up to about 20 kg per capita. In addition, some cooperatives have excelled in a number of jobs and have gained valuable experience in production work.

However, the midland and mountain cooperatives still have some weaknesses which must be overcome. For instance, their organization and production have not yet been stabilized; the quality of the cooperativization movement in general is still low, especially as far as the collectivization of the means of production and managerial work are concerned; and the leadership and management organization of various sectors and echelons are still not suitable to the characteristics of the midlands and mountain areas or the cooperatives established there.

Moreover, many state policies and regulations bearing directly on the tasks of strengthening cooperatives and developing agricultural and forestry production--such as the policies on investment, on the prices applied in the collection and purchase of products, on distribution and circulation, on the basic and advanced training of cadres, and so forth--have not yet been satisfactorily implemented by various sectors and echelons.

For the coming period, on the basis of firmly grasping the tasks of developing agricultural and forestry production and the need to improve managerial work, the northern midland and mountain provinces have adopted measures aimed at strengthening the organization of cooperatives and enhancing their managerial work. These measures are also designed simultaneously to promote production in the immediate future and create favorable conditions for cooperatives to develop long-term production in a fashion consistent with the characteristics and conditions of each area. The provinces will also combine consolidating and developing cooperatives with consolidating villages and strengthening the district level. They will also ensure solidarity among the people of different nationalities and closely coordinate economic building with national defense efforts.

The provinces will determine a logical production orientation and production pattern for each cooperative; make another study of the situation so as to determine a logical form and scale of organization for cooperatives; and study and carry out the decentralization of managerial responsibility for production, trading and distribution activities in cooperatives to suit the characteristics of each locality. The provinces will continue to promote the application of product contracts in cooperatives and study ways to satisfactorily resolve the problem of policies aimed at further consolidating cooperatives and promoting the development of production.

The provinces will step up the training of cadres for cooperatives, especially cadres recruited from among the various ethnic minority groups, so as to develop the cooperativization movement in the midlands and mountain areas steadily and in the right direction.

HANOI BROADCASTS 10-DAY AGRICULTURAL REVIEWS

11 October Report

BK111427 Hanoi Domestic Service in Vietnamese 0400 GMT 11 Oct 81

[Review of agricultural news for the past 10 days]

[Summary] "According to the General Statistics Department, as of 5 October, the northern provinces and cities had harvested more than 75,000 hectares of 10th-month rice, or more than 5 percent of the cultivated area. This was twice as much as the area they harvested during the same period last year. Hai Hung Province, working at a fairly brisk pace, has to date harvested nearly 20,000 hectares, while Ha Bac Province has reaped more than 10,000 hectares. Meanwhile, Ha Nam Ninh, Thanh Hoa, Bac Thai, Ha Son Bimh and Thai Binh Provinces have brought in 3,000-7,000 hectares each.

"The yields of the early 10th-month rice already harvested were low, mainly because of the serious damage caused by typhoons and leafhoppers to rice plants while they were heading. The yields of some early 10th-month rice areas affected by brown leafhoppers have gone down by 30-50 percent.

"Various provinces are now making full use of their work forces to harvest the 10th-month rice as soon as it ripens so as to free the fields for growing the winter crop. The widespread rainfall that came during several days in early October has created favorable conditions for the main 10th-month rice crop to head. Rice areas that were hit by drought have now been adequately irrigated. The drought-stricken rice acreage has been drastically reduced. In the region from Thanh Hoa Province southward, however, heavy downpours have caused flooding in more than 10,000 hectares of rice in low-lying areas. Those localities affected by waterlogging are actively working to save rice.

"To date, most of the main 10th-month rice crop has headed, while the late 10th-month rice crop is continuing to head. Judging by their look, the rice plants that have headed in various localities promise a fairly good main 10th-month crop. In fact, rice plants in many areas are developing more satisfactorily than last year. If not affected by leafhoppers, rice yields in these areas may exceed those of the early 10th-month crop.

"Harmful insects, however, have continued to ravage the 10th-month rice in a number of northern provinces, although the affected acreage last week was reduced compared with that of the previous week. At present, about more than 300,000 hectares are affected, but most of this acreage has been sprayed with insecticides. The area hit by brown leafhoppers still amounts to about 60,000-70,000 hectares, most of them planted with sticky rice and the Nong Nghiep 22 variety. The localities concerned are continuing to spray the affected areas with insecticides, striving to prevent the damage caused by brown leafhoppers from reaching epidemic proportions.

"Most noteworthy now is the problem of stem borers. Various localities have reported that stem borer larvae and caterpillars have appeared in many places. Although the insect density is low, large areas have been affected. All localities must remain alert and immediately devise extermination plans so as to prevent stem borers from developing and causing serious damage.

"In the south, the planting of the 10th-month crop is drawing to a close. Some provinces have basically completed the planting of the 10th-month rice and have shifted to caring for the rice plants. As of early October, the southern provinces and cities had planted more than 1.9 million hectares, fulfilling 92 percent of the norm. Specifically, Tien Giang Province has overfulfilled its rice planting plan by 9 percent and Cuu Long Province by nearly 1 percent. Elsewhere, An Giang, Dong Thap, Gia Lai-Cong Tum and other provinces have fulfilled their plans by 93-97 percent. Working at a slower pace, some localities such as Ben Tre and Phu Khanh Provinces and Ho Chi Minh City have fulfilled only more than 80 percent of their rice cultivation plans. Many provinces have stopped planting the 10th-month rice after fulfilling only more than 90 percent of their plans. A number of provinces in western Nam Bo which are in the habit of growing late rice crops are continuing to transplant rice in some more areas. Despite these efforts, the southern localities are unlikely to achieve the acreage target set for this 10th-month crop season.

"Although the southern provinces' 10th-month rice planting plan is not fulfilled, the acreage of 10th-month rice already transplanted represents a substantial increase over the same period last year. This is one of the 10th-month crop seasons with the largest acreage of rice transplanted.

"A fact worth noting is that in this year's 10th-month crop the southern provinces have planted many new high-yield, leafhopper-resistant rice varieties such as Nong Nghiep 3A and Nong Nghiep 7A. For this reason, the damage caused by harmful insects to the 10th-month rice crop in the south has been less extensive than last year. Transplanted on schedule and properly cared for, rice plants are developing fairly strongly, promising high yields for the season. Various provinces are striving to protect rice from waterlogging and harmful insects and preparing to grow the winter-spring rice crop."

Concerning the planting of vegetables, subsidiary food crops and industrial plants, rainfall has slowed down cultivation activities toward the end of last week. To date, the northern provinces and cities have grown only more than 50,000 hectares of these winter crops, fulfilling 14 percent of the norm. Despite the fact that the corn and sweet potato planting period is nearly over, so far only 17 percent of the sweet potato acreage plan, 16 percent of the corn acreage plan and nearly 20 percent of the acreage plan for various vegetables and leguminous plants have been fulfilled. For soybeans, more than 30 percent of the acreage plan has been fulfilled.

Now is the best time to plant winter crops. All localities should concentrate on quickly growing subsidiary food crops, especially sweet potatoes and corn.

With regard to animal husbandry, the hog and cattle population has increased, but epizootic epidemics are still continuing to reduce their numbers in some areas. All localities must try to promptly stamp out these epidemic outbreaks so as to prevent them from spreading.

In the future, the northern provinces should continue to protect the 10th-month rice areas not yet harvested, pay attention to controlling stem borers and step up the planting of winter crops. For their part, the southern provinces should try to complete the planting of the 10th-month rice crop in mid-October and prepare seeds and draft power for the winter-spring crop season.

21 October Report

BK211227 Hanoi Domestic Service in Vietnamese 0400 GMT 21 Oct 81

[Agricultural review for the past 10 days]

[Summary] "According to statistics provided by the General Statistics Department, as of mid-October provinces and cities in the north had harvested 10th-month rice on more than 140,000 hectares, or more than 10 percent of the sown area."

By the middle of last week, rain was reported in many areas. "Heavy rains and strong monsoon winds hit the former Region 4--from Thanh Hoa to Binh Tri Thien--destroying more than 10,000 hectares of rice and waterlogging tens of thousands of hectares of 10th-month rice awaiting harvest. In Nghe Tinh Province more than 5,000 hectares of rice were submerged under floodwater and more than 1,000 hectares each in Thanh Hoa, Ha Nam Ninh and Ha Son Binh Provinces." These localities are making full use of available pumps to save the ricefields from being destroyed.

"In the past week, the insect-infested 10th-month rice area in the northern provinces was reduced by nearly 200,000 hectares as compared with the preceding week. At present about 150,000 hectares of 10th-month rice are being ravaged by insects, particularly brown leafhoppers and stem borers." Localities are striving to eradicate insects harmful to rice, determined not to let them spread into late-sown 10th-month rice areas.

"The provinces in the south have concluded the planting of 10th-month rice on 1.92 million hectares, or more than 93 percent of the originally planned target. Quang Nam-Danang, Tien Giang and Cuu Long Provinces overplanted their planned acreages."

As for the planting of vegetables, subsidiary food crops and industrial crops, by mid-October, provinces and cities in the north nad been able to plant only some 80,000 hectares. Although this planting pace is faster than the same period last year, it is far behind schedule. As evidence, some provinces have so far been able to plant only a total of 1,000 hectares of potatoes.

Localities should concentrate on carrying out the following major tasks in the period ahead:

--The northern provinces should continue to protect 10th-month rice against insect destruction and quickly harvest 10th-month rice so as to clear the land for planting winter crops. Localities which are faced with waterlogging in ricefields should use every means possible to combat waterlogging and should satisfactorily care for winter crop areas already sown.

--The southern provinces should stop planting 10th-month rice and protect the 10th-month rice areas already sown from destruction by natural calamities and insects. They should make necessary preparations for the cultivation of rice, vegetables and subsidiary food crops in the winter-spring season.

PRODUCT CONTRACTING, MANAGEMENT OF AGRICULTURAL COOPERATIVES DISCUSSED

Hanoi NHAN DAN in Vietnamese 18 Sep 81 p 1

[Editorial: "Broaden the Product Contract System and Improve and Raise the Management Standard"]

[Text] Contracting is a form of economic management. Each form of contract reflects specific management subjects. Establishing a product contract with laborers is a new form of management which coordinates production organization and labor assignment with remuneration according to the production result, which is aimed at directly associating the laborers' responsibilities and rights with the end product and which requires cooperative management to meet the demands of the new form of contract and to build diverse managerial aspects into a suitable mechanism.

Crop product contracting must conform to a rational production pattern for each agricultural season and crop. Based on the production guidelines set forth according to the regional project, each cooperative must arrange an appropriate production pattern in order to be able to fully use the land and labor potential and to simultaneously create conditions to transform and increase land fertility. Only by applying a progressive production pattern can a cooperative effectively manage and use all types of land entrusted by contract to its members for complete cultivation, prevent unilateral practices in carrying out the contract, obtain the even development of all kinds of crop in each agricultural season and create favorable conditions for the contractors to interplant different crops.

The plan drawn up by a cooperative will serve as a basis for assigning works on contract. For this reason, this plan must exactly reflect the theme of the production plan from the financial point of view. It must determine production development norms, ensure a balance among labor, technical supplies and capital and rationally resolve problems regarding income and expenditures for each sector, crop and production team. When applying the product contract system to laborers, this plan must be more meticulous and must determine a symmetry between various production factors for each piece of field. Raising the planning standard is simultaneously heightening the accounting level so as to do profitable business to increase the cooperative members' income and accumulate more capital for the cooperative. It is necessary to link the production plan to the distribution plan (including money and material resources) and to harmoniously associate the three benefits. Toward this end, essential conditions must be created for cooperatives to draw up plans and especially to consider it important to build a system of economic-technical norms conformable to production conditions. Only by setting realistic and accurate economic-technical norms can one obtain a scientific basis for calculations aimed at ensuring a balance among various aspects of the plan and also for letting out work on contract with each individual.

Labor organization and assignment is a condition for cooperatives to achieve high effectiveness in production. The first things to do are to distribute the labor forces within the cooperative, to closely coordinate primary with auxiliary labor, to determine various forms and organizations of labor and to strengthen and consolidate production teams to turn them into real basic production units. In applying the system of end-product contract with laborers, conditions must be created to fully use all labor potentials and to simultaneously help increase labor productivity and enable everyone to work as much as he can for the collective's benefit and also to earn a higher income in terms of money and grains from each man-day.

The qualities and managerial capabilities of cadres constitute a decisive factor in heightening the overall managerial standard of a cooperative. The managerial apparatus must comprise persons who are enthusiastic about common affairs, who have a high sense of responsibility, who are receptive to novelties, who have an organizational and managerial know-how and who respect the masses' opinion and develop the cooperative members' right to collective ownership. Cadres responsible for managing cooperatives and production units must be fully trained in leadership and management according to the new system.

The agricultural product contract movement is promoting the structural improvement of cooperatives as well as their overall management standard. To raise the management standard is to make it possible to vigorously and extensively apply the system of end-product contract with laborers.

'NHAN DAN' EDITORIAL ON CROP CULTIVATION

BK130509 Hanoi Domestic Service in Vietnamese 2300 GMT 11 Oct 81

[NHAN DAN 12 October editorial: "Cultivate the Best Winter-Spring Crop"]

[Summary] "Preparations are being made by localities for cultivating the winter-spring crop, marking the opening of the 1982 agricultural production plan. The results of this crop will decide the implementation of the agricultural plan for the entire year.

"The winter-spring crop usually gives a high yield, and its rice output is higher than those of the summer-fall and 10th-month crops. Favorable natural conditions and scientific and technological advances provide great capabilities for developing the winter-spring crop."

Weather conditions during the winter-spring crop are relatively stabilized, and there are no storms and typhoons. The expansion of the spring rice area in the north and the cultivation of the additional winter-spring crop in the south with high-yield, insect-resistant rice varieties are new, important features in agricultural production.

"Particularly in the Nam Bo provinces, if the irrigation problem can be solved while the water level of the Mekong River is low and if there are measures for improving the acidic and saline soil, the coming winter-spring crop area can be expanded to as many as 1 million hectares. At present, only 570,000 hectares have been planted with this crop.

"The norms for the 1981-82 winter-spring crop are higher than those of the successful 1980-81 winter-spring crop. Specifically, its area must be increased by about 5 percent; its productivity, more than 3 percent; and its total volume of production, nearly 9 percent." Moreover, there will be no increase in the supply of materials, and the amounts of some kinds of these materials will be smaller than in the past.

"The recent winter-spring and 10th-month crops show that in spite of the insufficient supply of production materials and the unexpected occurrence of natural calamities during the coming winter-spring crop, localities and production establishments will be able to make it a success if they develop the spirit of revolutionary offensive, overcome all difficulties, exploit existing and latent potentials in manpower, land and all available materials and technical facilities, improve the management and leadership of the application of technical advances and bring into full play the effect of the new, production-encouraging policies."

In cultivating the coming winter-spring crop, localities and production establishments must review, readjust and rationally carry out their zoning plans and choose suitable rice varieties in order to achieve the highest economic efficiency.

Irrigation remains one of the most important tasks in the winter-spring crop because drought may occur during this season. According to forecasts, the water level of reservoirs, lakes and rivers will be lower than in the past year. Therefore, localities must plan to conserve water in ricefields and ponds right now.

Nitrogen fertilizer will be insufficient. So field fertilizer and animal manure must be prepared in abundance and used extensively. Plans must be worked out to ensure the adequate supply of rice seeds so that the entire area will be transplanted on schedule according to proper techniques.

"The product contract system in agriculture must be applied to the 1981-82 winter-spring crop throughout the country. The Nam Bo provinces must make every effort to accelerate the trial application of this system and expand it steadily to all production collectives and cooperatives. New state policies on increasing the purchasing prices of agricultural products and improving the methods of distribution of production materials, and other production-encouraging policies will contribute to accelerating the production of the coming winter-spring crop."

CSO: 4209/41

CONFERENCE ASSESSES 1981 RICE PRODUCTION

BK161551 Hanoi NHAN DAN in Vietnamese 26 Sep 81 p 1

[Excerpt] The Ministry of Agriculture recently held a conference of delegates from various agricultural services and bureaus in a certain number of provinces and cities to assess grain production during the 1980-81 winter-spring crop season and the 1981 summer-fall crop season and to estimate the production volume of the 1981 10th-month crop season, including rice and subsidiary food crops equivalent to rice. On the basis of an assessment of the situation, the conferees set forth specific measures to continue the struggle to implement the 1981 grain production plan and to prepare for the 1982 production plan.

Although grain production is much better this year, the 1981 plan norm, as well as the national requirements, demand even greater efforts from the agricultural production sector. Despite an increase of 223,600 tons of grain--mainly rice in the northern provinces--in this winter-spring season over the last one, or a 4.3 percent increase, the plan norm is still not fulfilled. Some localities, mainly in the south, achieved a good yield in the summer-fall crop. However, due to drought and insects, the cultivated area was 63,000 hectares below the plan norm and 35,000 hectares less than the 1980 summer-fall crop.

Productivity in some other localities is low and it is likely that they will not fulfill their plan norms for production volume. Some 3.1 million hectares of the 10th-month crop have been planted, falling behind the plan norm by 270,000 hectares. Of this figure, 1.31 million hectares are in the north, the largest area ever cultivated in that part of the country.

In general, rice has developed well but there still are more than 200,000 hectares seriously affected by insects, despite the fact that several insect control drives have been conducted in a positive manner. Damage was caused primarily by leafrollers, brown bugs and rats.

The southern provinces and cities have planted about 1.8 million hectares of 10th-month crop at a rate quicker than that in the 1980 crop season. However, it will be difficult to meet the plan norm because drought and floods have caused a decrease in the cultivated area and has adversely affected the rice yield.

The conferees concentrated on discussing the following issues:

To ensure the fulfillment of the rice cultivation plan, the southern provinces will continue to plant 10th-month rice on the remaining area, completely harvest the summer-fall rice and quickly harvest the extra crop planted in the highlands in order to transplant the third crop and the fall-winter crop--between 90,000 to 100,000 hectares--promptly.

In the north, the early 10th-month rice will be harvested quickly and completely so that the winter crop can be planted on schedule. Efforts should be continued by all provinces and cities to care for and protect rice from drought and pests, especially brown bugs, leafrollers, rats and army worms. Fertilizer will be concentrated in those areas of belatedly transplanted and multicropped rice in order to secure an increase of 2 or 3 quintals of rice per hectare over the plan norm.

During the 1980-81 winter-spring season, 1.2 million tons of subsidiary food crops equivalent to rice were harvested, some 2.2 million tons below the 1981 plan norm. This requires all provinces and sectors to exert outstanding efforts in the summer-fall, fall-winter and winter crop seasons. In the summer-fall season, some 271,000 hectares of subsidiary food crops have been planted throughout the country, 30,000 hectares less than in the same period last year. The Ministry of Agriculture requests all localities to harvest the summer-fall (1st crop) crop quickly and overfulfill the area plan norm for the fall-winter crop (2nd crop), and intensively cultivate the fall-winter crop in order to secure a high yield in compensation for the decrease in cultivated area.

FIGURES ON HANOI AGRICULTURAL EXPORTS GIVEN

Hanoi HANOI MOI in Vietnamese 20 Aug 81 p 3

[Article: "Do You Know?"]

[Text] In 1979, Hanoi exported only 2.5 million dong worth of agricultural products, including processed commodities. In 1980, the value of its agricultural exports nearly reached 10 million dong owing to the grain pricing policy directed at a number of crops such as peanuts and sesame, and the active guidance of the Federation of Imports-Exports Corporations in agricultural purchases and two-way barter outside the plan. This year, Hanoi will purchase 15 million dong worth of agricultural products for export, representing from 5 to 8 percent of the total value of agricultural products.

In 1980, the planned export of five agricultural products broke down as follows:

Peanuts: 250 tons

Red pepper: 20 tons

Flowers: 400,000 flowers (up 200 percent from previous years)

Silk: 20 tons

Jute: 500 tons.

In 1981, the list included four new commodities:

	As Planned	Capable of Producing
Peanuts	600 tons	1,000 tons
Sesame	50 tons	100 tons
Red Pepper	150 tons	50 tons
Dried tamarind	50 tons	70 tons
Medicinal agents	100 tons	120 tons

	As Planned	Capable of Producing
Jute	1,200 tons	900 tons
Silk	20 tons	20 tons
Flowers	500,000 flowers	1 million flowers
Vegetables (carrots and cabbage)	3,000 tons	3,000 tons

In 1980, the Federation of Imports-Exports Corporations began to reward districts and purchasing stations for fulfilling purchasing norms and ensuring quality on a number of commodities, as follows:

--Peanuts: a reward of 150 dong for fulfilling plan; 300 dong for exceeding plan by 1 ton.

--Dried tamarind: 200 dong for 1 ton.

--Duck feathers: 200 dong for exceeding plan by 1 ton.

The districts receiving awards in 1980 included:

Gia Lam, for purchasing 34 tons of sesame outside the plan.

Dan Phuong-Hoai Duc for purchasing 17 tons of dried tamarind outside the plan.

Dong Anh, for purchasing 62.6 tons of potatoes outside the plan.

Son Tay, for purchasing 18.6 tons of ripe bananas outside the plan.

Soc Son and Me Linh, for purchasing a great quantity of peanuts outside the plan.

Tobacco and peanuts, the two main industrial crops of Soc Son District, can be exported.

AGRICULTURE

AGRICULTURAL COOPERATIVES TO BE CONSOLIDATED, DEVELOPED

Hanoi NHAN DAN in Vietnamese 19 Sep 81 p 1

[VNA News Release: "Midland and Highland Provinces in North Vietnam Carry out Measures To Consolidate and Develop Agricultural Cooperatives"]

[Text] The northern midland and highland provinces have 6,708 agricultural cooperatives, which account for 60.5 percent of the total number of cooperatives and have one-third of the cultivated area in the north (excluding nearly 1,800 cooperatives in the highlands that belong to the delta and former Zone 4 provinces).

In recent years the cooperative movement in the midlands and highlands made some progress in terms of consolidating organization, improving management, maintaining production and having many new factors in connection with organization of management and production, with such factors now showing their positive effects in the localities and production installations.

In addition to readjusting the scale of cooperatives to make it rational, organizing production units of appropriate size, creating favorable conditions for cooperatives to quickly stabilize their organization to make it easier for management and stepping up production, the highland provinces also strengthened leadership, concentrated all efforts on the task of consolidating hundreds of poorly organized or weak cooperatives and organized a number of new cooperatives. Hoang Lien Son Province consolidated 127 cooperatives. By consolidating its cooperatives better, Lang Son succeeded in having 90 percent of farmer families joining collective production in 5 of its 6 border districts. Cao Bang, Lang Son, Hoang Lien Son and Ha Tuyen Provinces had over 60 additional villages having successfully consolidated their existing cooperatives or established new ones.

The outstanding progress made by the midland and highland cooperatives in management was the fact that many of them obtained good results in the adoption of product contracts with labor groups and laborers.

In the 1980-1981 fifth-month and spring season and the 1981 tenth-month season, almost all cooperatives in the midlands and highlands signed product contracts.

Six highland provinces also had over 1,000 cooperatives -- nearly 19 percent of the total number of cooperatives in the highlands -- signing product contracts.

As an overall observation, the cooperatives that adopted the new way of contracting did obtain good results in many activities as they really succeeded in helping to consolidate themselves, developing production and increasing income for members, accumulation for the collectives and contributions to the state. For the cooperatives in the highlands, the new way of contracting mobilized and encouraged the tribal people to pay attention to intensive cultivation of wet and upland rice and to limit the practice of destroying forest land to turn it into upland field. Vinh Hai (Chiem Hoa District in Ha Tuyen Province) Cooperative, in the 1980-1981 fifth-month and spring season, signed product contracts with laborers for its entire area of rice and corn cultivation. Both rice and corn crops were good and their yield was high.

As to the rice crop alone, the area increased by 16 hectares and the yield by 5 quintals/hectare as compared with the previous crop, both being the highest figures until then. What deserves attention is the fact that since its members were devoting their labor to intensive cultivation in the assigned fields, both rice and corn crops were good and high yields were obtained, which raised the income and improved the standard of living of its members, thus preventing them from working for their living on an individual basis and burning forest land to turn it into upland fields as the tribal people had been doing before.

Vinh Hai also succeeded in putting an end to the situation in which members would stay away from the collective ricefields and grow crops in upland fields of their own families.

Although the midland and highland cooperatives had weak material and technical bases and encountered difficulties caused by natural calamities and enemy-inflicted misfortunes, production and the standard of living of members of many cooperatives were maintained and improved, particularly in the progressive cooperatives.

Many cooperatives obtained an average annual per capita grain production of about 400 kilograms and, in some cases, even 500 kilograms. Subsidiary food crops in some localities accounted for 40-50 percent, with grain contributions to the state reaching about a ton per hectare of cultivated land and for the first time such agricultural products as tea, soybean, tobacco, camellia, tung tree, etc. being sold to the state; a working day had the value of 1 dong and more and 1.5-2 kilograms of grain, with the monthly food consumption being about 20 kilograms per person. A number of cooperatives which excelled at some aspects of their work had a lot of precious experience.

However, the highland and midland cooperatives still have many weaknesses that need to be overcome: their organization and production are far from stable; the quality of the movement to establish cooperatives has been generally poor, mainly in two aspects -- collectivization of the means of production and management. Leadership and organization of management as provided by different sectors and echelons have not yet been suitable for the characteristics of the midlands and highlands and the cooperatives there. Many state policies and procedures that are directly related to consolidating cooperatives and developing agricultural production and forestry, such as those that deal with investment, purchase prices, distribution, circulation and training of cadres, have not yet been satisfactorily resolved by these sectors and echelons.

For the time to come, on the basis of adhering to the task of developing agricultural production and forestry and the need to improve management, the midland and highland provinces in the north have proposed some measures designed to consolidate organization and to raise different aspects of cooperative management in order both to ensure stepping up production in the immediate future and to create favorable conditions for their cooperatives to have long-term production development suitable for the characteristics and conditions of individual localities. To consolidate and develop the cooperatives is closely linked with consolidating villages, strengthening the district level, ensuring tribal solidarity and closely combining economic matters with national defense.

The provinces also determine rational production direction and structure for each cooperative; review the situation and determine rational form of organization and scale; and study and apply managerial decentralization for production, business and distribution in the cooperatives to make them suitable for the characteristics of different localities. They continue to step up signing product contracts in the cooperatives and study policy matters to resolve them properly so as to consolidate the cooperatives and to promote development of production.

They are going to step up consolidating and strengthening the training of cadres for the cooperatives, particularly cadres among tribal people, to make the cooperative movement in the midlands and highlands develop in the right direction and steadily.

AGRICULTURE MINISTER HAILS WORLD FOOD DAY

OW161521 Hanoi VNA in English 1454 GMT 16 Oct 81

[Text] Hanoi, VNA, 16 Oct--"Vietnam welcomes FAO's initiative in organising a World Food Day yearly beginning from this year," said Nguyen Ngoc Triu, minister of agriculture, chairman of the Vietnam Committee for the World Food Day, in an interview with Viet Nam News Agency.

After dealing with the vital importance of food for human life and the urgency of the food problem, the minister said: "Food remains a problem of foremost concern for our party, government and people. We have met with innumerable difficulties in striving to solve the food problem. After the victory of the 1945 August revolution Vietnam was left with the grim heritage of French colonialism in the form of two million deaths of famine and millions of others suffering from undernutrition and related diseases. In the ensuing wars of resistance, the imperialists dropped millions of tonnes of explosives and toxic chemicals on the ricefields, villages, forests and sea of Vietnam, killing, maiming or disabling tens of thousands of people mostly those engaged in food production. The bombs, shells and chemicals not only destroyed the crops and domestic animals, forest and marine resources but also wreaked havoc on the major part of the infrastrucutre for the production, processing, storing, transportation and distribution of food. Today, at a time when Vietnam is putting allout effort into overcoming the heavy consequences of 30 years of war and the frequent natural disasters especially during the past few years, the Beijing expansionists in collaboration with the U.S. imperialists and their agents are undertaking a series of maneuvers aimed at sabotaging, disrupting and presenting [as received] food production in Vietnam, especially in the northern border provinces.

The minister went on: "With the devoted and valuable assistance of the Soviet Union, the other socialist countries and friendly countries and international organisations, the Vietnamese people have overcome many difficulties and obstacles and obtained encouraging results in food production. We are exploiting the vast potentialities of our land, plants, animals and tropical climate and other natural advantages as well as the great potential in manpower in service of food production.

"In the years to come, we will continue to step up food production through intensive cultivation, multiplication of crops and expansion of the cultivated area.

"Experience has shown that in the present natural conditions of Vietnam many plants and animals are capable of giving outputs from one and one'half times to three times and even more compared with present outputs if we can make proper and adequate use of some elements which can be brought about through our own efforts.

"There remains a relatively large area of land and water that can be put under cultivation or aquatic production, especially in the Mekong River Delta and the central highlands. Plans have been adopted to invest steadily and gradually more funds, technology and manpower in food production (the latter being part of the overall plan of redistributing manpower on a national scale), and also to better organize the labour force. We are confident that if such measures are properly carried out we will be able to increase our food production in a substantial way.

"Along with solving the food problem we must also ensure good implementation of the family planning program and other related questions."

CSO: 4220/46

NEW RICE STRAINS BOOST PRODUCTION IN VIETNAM

OW181539 Hanoi VNA in English 1449 GMT 18 Oct 81

[Text] Hanoi VNA 18 October--Vietnam has 8,090,000 hectares of food crops of which 5,544,000 hectares are grown with rice.

The old rice strains generally gave low yields, had long stems and required long periods of cultivation, some as much as 330 days. They have been gradually replaced by new hybrids obtained from crossing with imported strains. Since 1975, eight new strains have been produced and put under large-scale cultivation.

The northern provinces are chiefly grown with the "N.N 75.2" strain which is harvested in summer, and the early autumn rice strain named "NN 75-6" which is harvested in autumn. The "NN 75-2" crossed by the Institute of Agriculture technique requires a growth period of 200 days and can be planted on phosphate-deficient soils. It is also resistant to cold and pest and has a higher yield than the old summer rice species. It has been sown on tens of thousands of hectares of low-lying fields, giving an average of from 3.5 to four tonnes per hectare. the "NN 75-6" crossed by the Institute of Food Crops has a growth period of only from 90 to 95 days and gives from three to three and a half tonnes per hectare. It is being cultivated on tens of thousands of hectares in the north.

The shorter growth periods of the new rice strains have made it possible to add a vegetable crop or a subsidiary food crop in between two rice crops in a year.

In Southern Vietnam, many rice seed farms and institutes and research centres on agricultural techniques have been set up since liberation. Up to 1980, with the collaboration of international agencies chiefly with the I.R.R.I. in the Philippines, five new speicies have been produced. In the three years of 1976, 1977 and 1978, millions of hectares of rice were affected by brown plant-hoppers, but the damage was greatly reduced thanks to the cultivation of these pest-resistant rice strains.

In particular, the new strains have boosted the gross rice output in 1980 by nearly one million tonnes compared with 1975.

BRIEFS

MARINE PRODUCTS--Hanoi, 14 Oct (VNA)--Over 306,000 tonnes of marine products were exploited during the last nine months, accounting for 76 percent of the 1981 annual plan and marking a six percent increase over the figure in the whole of last year. The five coastal provinces of Central Vietnam, namely Quang Nam-Danang, Binh Tri Thien, Nghia Binh, Phu Khanh and Thuan Hai, have achieved ninety percent of their annual programs which account for half of the marine produce of the whole country. Particularly, the Vung Tau-con Dao special sector, including the Con Dao state-run enterprise which has captured domestic headlines for its shaply increased output, has achieved 98.2 percent of its 1981 plan. HEAVY INDUSTRY AND CONSTRUCTION

PROSPECTS OF ENERGY SECTOR DEVELOPMENT DISCUSSED

Hanoi TO QUOC in Vietnamese No 6, Jun 81 pp 17-20

[Article by Ha Hoc Trac, Assistant Professor of Electric Network: "Prospects for Development of the Energy Sector"]

[Text] A characteristic of the scientific-technical revolution in the second half of the 20th century is a rapid increase in the need for mulfiform energy and, first and foremost, the widespread introduction of electric energy into all fields of activity of mankind. At present, one can hardly find any national economic sector the overall development of which is not influenced by energy as the principal factor.

Shortage of energy--especially electricity--has done tremendous damage to our country with its undeveloped industry. If conditions permit an accurate assessment of the economic damage in terms of money, the figures to be attained will make many people thoughtful. We have not yet spoken of other important drawbacks which cannot be evaluated in terms of money such as the [bad] influence in the political field, on [the people's] confidence and on socio-cultural, communication and propaganda activities. No matter whatever his position, everyone is clearly aware of this situation and has to bear its direct effects on both his task performance and daily life. For example, for many months it has been impossible for a college to carry out a semiconductor production experiment which requires a 24-hour continuous electric supply only once: I have had the opportunity to participate in the activities of the Science and Technology Commission in the city and to discuss the electric supply possibilities with the comrades in the Municipal Party Committee and People's Committee but it regrettably appears that we are almost helpless and resigned to accepting the fact that, like cities in the 19th century, ours has to live by a dim. reddish flickering light!

This problem is one which causes great obstacles and exercises a bad influence to our detriment. However, it is very difficult to solve. The root cause of the abovementioned situation is the decisions made in the past and also the characteristics of the energy sector, in general, and the electric one, in particular. These characteristics are constituted by a very large capital investment and a very long construction time. If we are short of rice, we may immediately organize its purchase and transportation from areas that have it in excess or we may spend some amount of foreign currency to import it. But to receive the first electric current from the Hoa Binh Hydroelectric Plant, we must wait at least 7 years from the time construction is started under the same conditions as those normally prevailing in the Soviet Union. To have an atomic electric plant with a capacity of about 1 million kilowatts, it will take, under ideal conditions, 10 to 12 years from the time its construction is decided to the moment it begins to operate. To establish a 500-kilovolt superhigh-tension wire to link North to South Vietnam and to carry the electric current from the abundant electric sources in the north to the economic and industrial regions in Central and South Vietnam, it will take 5 years to do research and planning and 10 to 12 years to do the construction work. This means that if we propose to have such a wire by the year 2000, we will have to make a decision right in the next few years. We are concentrating all our forces and means on rapidly building the Pha Lai thermoelectric plant in an attempt to save the northern region and the Hanoi capital area from the present electricity shortage but we cannot hope to commission the first machine group by 1983. There still will be a shortage of electricity after Pha Lai [has been built]. To date, no preparation has been made to acquire any additional source of electricity prior to commissioning the Hoa Binh hydroelectric plant. Even though any decision to be made now will prove belated, we have not yet made up our mind! Compared with the capital city of Hanoi, the electricity supply to Ho Chi Minh City is better mainly because of nearly 1 billion of kilowatt hours of power provided by the Da Nhim hydroelectric plant. Yet, if this power plant or the 230-kilovolt wire which carries electricity into the city breaks down (this possibility will in all probabilities only be more likely as time goes by), the damage done by electricity shortage to this city will be much more serious. It is, therefore, necessary to urgently start building the Tri An hydroelectric plant which will be located 80 kms from Ho Chi Minh City, which will have a capacity of 280 megawatts, which will have a yearly power output of 1.2 billion kilowatt-hours and which may be commissioned at the beginning of the fourth 5-year plan to provide timely support for the southern electricity network.

In matters of energy, we are indeed faced with great difficulties which are, however, inherent to maturity and to the inception of a socialist industrialization stage based on a widespread small-scale production system. From a subjective point of view, we also have some shortcomings such as the lack of a long-term plan for development of the energy sector and for a balance of energy on a stable scientific basis.

Our country possesses very abundant and multiform potentials of energy. From now to the end of this century and to the beginning of the next one, we may have our mind at ease on the energy problem (even on the basis of the current scientific-technological standard in the world). As for the capitalist world, the energy crisis is a difficulty because of its own nature. France has a hydroelectric potential equivalent to that of our country but has exploited it to depletion. On the contrary, we still have 70 to 80 billion kilowatts of hydroelectric technical reserve (which can be exploited under the present technical conditions). Though being a great petroleum producer, the United States has to import everyday a volume of petroleum nearly equal to that imported by us every year.

After the 1973 energy crisis, energy has become a primary matter of concern for many nations, a cause of fundamental changes in the economic-scientific-technical strategy of many countries and also a reason for numerous political disturbances.

As for our country, what problems must it focus on solving to enable the enrgy sector to rapidly develop, to fulfill its mission a step ahead of time and to provide a motive power for other economic sectors? This is a subject matter for study and involves also problems requiring solution within the framework of the key state programs of scientific-technical progress in the field of energy--first and foremost.

of the program for optimal fuel-energy balance throughout the nation and in each region during the 1986-1990 period and up to the year 2000. Within the limits of this article, we wish to present only some ideas.

First of all, we would like to deal with the problem of norms which is obsessing many people. At present, to estimate the rate of development of the energy sector and electrification of a country, one usually employs two types of norm--the energy consumption norm (tons of standard fuel) and the electric energy consumption norm (kilowatt-hour) on a yearly per capita basis. For the first norm, we have achieved a little bit above 120 kgs (versus the average yearly per capita norm in the world which is over 2 tons of standard fuel). This norm has scarcely been used by us and the method of calculating it is not yet really accurate. Concerning the second norm, we are still at a very low level--about 100 kilowatt-hours (while the average yearly per capita norm is nearly 2,000 kilowatt-hours throughout the world and has even surpassed 10,000 kilowatt-hours in many countries such as Norway, Canada, Sweden, the United States and so on). Though important, this norms does not determine the economic strength of a country and the standard of its moral and material life. The Soviet Union has become one of the two great powers with the greatest economic strength in the world but, with regard to this norm, still ranks after dozens of countries and has attaned only half the U.S. norm.

There has been the opinion that by 2000 we will have to reach the yearly per capital norm of 2,000 kilowatt-hours. Actually, this norm is not high because it is only half the world average norm in 1980. To attain it by the year 2000, however, we will have to produce 150 billion kilowatt-hours which is equivalent to the output of 450 plants of the type of the Thac Ba hydroelectric plant (with a yearly production of 300 to 350 million kilowatt-hours)--that is, we will have to complete the construction of at least 15 plants of the size of the Hoa Binh hydroelectric plant or 50 plants of the size of the Pha Lai thermoelectric plant. It will be impossible for us to reach so great a capacity in 15 years--not to mention the need to build the corresponding networks of electric transmission and distribution wires as well as industrial, communication and transportation projects designed to serve and use the energy produced. Nevertheless, it is still possible and necessary for us to build a moral and material life with a standard which must not only be superior to the present world average level but also be appropriate for the year 2000. We do not need to run after the yearly per capita norm of 2,000 kilowatt-hours. Our new outlook is to fully meet the demand of economy and daily life by means of a minimum energy consumption norm. To depict the relationships between the energy development rate and the economic development standard, one uses an index determined by the ratio between the energy consumption development rate and the national income increase rate. This index differs greatly with each country (for example, 0.21 in Denmark versus 1.36 in the Netherlands in 1973) because it depends in a very large measure on numerous factors--not only on the process of utilizing industry but also on the socio-economic policy, consumption pattern, living customs, etc. of a county.

The energy problem is really a matter of concern for mankind. One has already to take the future generations into consideration in formulating any policy to exploit and use energy. In studying and managing such an important sector, each country has found it necessary to set up and empower state organs and research institutes to work out major basic policies on energy development. What differs the energy sector from other economic ones is that it has the most definite systematic character. Not only has it close relationships with the activities of all other national economic sectors and all aspects of socal life but, by its very nature, it is also a vast sector composed of many branches (such as coal, oil, natural gas, electricity including thermoelectricity, hydroelectricity and so forth). It follows that individual ministries do not have the functional, competent and professional capabilities to manage and study aggregate and systematic problems of the energy sector such as the issue of energy balance.

In recent years, many countries have paid attention to investing in intensive research into various forms of reproduced [thais sinh] energy. Many solar and wind-operated power plants have been built and commissioned but their capacities are still small and their cost high. In November 1976, the Odeillo solar power plant in France began to generate electricity into its network with a 64-kilowatt capacity. Recently, in Ouessant Island (France), a wind-operated power plant has been commissioned with a capacity of 100 kilowatts connected to the electric network in the island. At present, there are more than 70 solar pumps operating in 20 African and South American countries to carry out agricultural irrigation, to pump drinking water for the inhabitants, to provide light for villages and town, to supply electricity to refrigeratingwarehouses to preserve agricultural products and so forth. But solar energy is used most extensively and effectively when low temperatures are required such as to boil drinking water, to carry out drying, warming and cooling and for use in combination with other forms of energy in building housing projects. By the year 2000, the multiform reproduced energy will not yet represent a notworthy ratio in the energy balance. Usually, the electricity generating works which were recently inaugurated in certain industrially developed countries are more of a research, experimental and advertising nature suitable for export purposes than are designed to contribute to the electricity network to replace other sources of energy.

Our opinion is that, in the near future, our country needs to concentrate efforts on providing a more intensive guidance for the research into the use of biological gas energy. This is a trend with good prospects and of great practical significance since it will require only a simple equipment, the possible use of local materials and an uncomplicated operational technique. By following this trend, we will be able to meet many very urgent needs such as simultaneously cleaning the environment and increasing the nitrogen quantity in fertilizers while cultivating algae to feed domestic animals, and to provide fuel and light for the people and investigating the possible use in internal combustion engines, etc. From 1973 to 1976, India built and operated more than 40,000 biological gas producing tanks. This is a practical fact which we need to investigate.

USE OF PEAT AS FUEL URGED

Hanoi HANOI MOI in Vietnamese 26 Aug 81 p 3

[Article: "Use Peat As Fuel, Conserve Anthracite"]

[Text] Recently, the Hanoi Coal Supply Corporation held a conference to disseminate the experience of Ba Vi in using peat. Le Thuc, vice minister of Mines and Coal, attended the conference, as well as representatives of the General Coal Corporation, the Ministry of Mines and Coal Technological Department, the Fuel Corporation, the Municipal Planning Commission, the Commercial Service, the Mineral Fertilizer Enterprise, and a number of coal-using units from the Son Tay area.

Son Tay is a locality endowed with a peat bed and a reserve of about 1.2 million tons. So far, peat has been used only as fertilizer in acid and salty soil areas. Scattered places have used it as a fuel, but still not in large quantities. Of late, the management bureau of the People's Police Officers' Academy mess hall used peat to cook meals for thousands of cadres and students. After experimenting with different mixtures, they have found an adequate formula, blending 40 percent of powdered coal and 20 percent of pond mud with 40 percent of local peat. Since April 1979, the management bureau has reduced powdered coal consumption by 40 percent, made a 22,000 dong profit for the collective, cut down coal shipping costs, and averted the pain of buying coal at high prices, etc.

At the conference, Academy representatives spoke about their experiences in organizing the exploitation, production and storage of coal, and about guidance to achieve the use of peat as a fuel. The participants then inspected the peat producing center and the improved mud ovens designed to conserve coal. The conference unanimously adopted the guidelines on using local peat and building improved collective ovens to conserve anthracite.

TRANSPORTATION AND COMMUNICATIONS

YEN VIEN-GIA LAM RAILWAY UPGRADED, WIDENED

Hanoi QUAN DOI NHAN DAN in Vietnamese 10 Sep 81 p 1

[Article by Hang Vu: "Upgrading and Widening of Yen Vien-Gia Lam Railway Completed"]

[Text] Competing for achievements to celebrate National Day on September 2 and the Fifty National Party Congress, Railway [Line] 8 Corporation (Railroad General Department) cadres and workers have completed work on upgrading and widening the railway section from Yen Vien to Gia Lam via the Duong bridge.

Previously, the northern railroad system accommodated two sizes of cars--1 meter and 1.435 meter-wide--until Yen Vien only, thus causing many difficulties to transportation as well as repair.

To enable 1.435 meter-wide cars to reach the Gia Lam railroad station, and to bring large-size locomotives into the Gia Lam Rolling Stock Works for repairs, Railway Corporation 8 has urgently upgraded, widened, and added double rails to the 6.7 km-long line from the Yen Vien railroad station to the Gia Lam railroad station and Rolling Stock Works; and has installed five double switches and three simple switches. During the construction process, cadres and workers have overcome all difficulties and shortages of supplies, introduced tens of initiatives to improve work, and contracted out various categories of work to production groups. After three months of work, they have excavated 12,000 cubic meters of earth and more than 7,000 cubic meters of stone, and installed 9,000 crossties and 6.7 km of large-size rails. The project was completed and put in commission three days ahead of schedule.

On September 1, 1981, at 1500 hours, the 1.435 meter-wide locomotive bearing no GP 6 1045 conducted by the Duong Dinh Chuc drivers' team, brought large-size cars into the Gia Lam railroad station and Rolling Stock Works for the first time.

On that occasion, cadres and workers at the Rolling Stock Works held a meeting to receive the first large-size locomotive for repairs. They stated their determination to complete the repairs ahead of schedule so as to support transportation and salute the Fifth National Party Congress with outstanding achievements.

By upgrading and widening the Yen Vien-Gia Lam railway and accommodating locomotives and cars measuring 1 meter and 1.435 meters, a major contribution has been made to raising transportation capabilities and partly overcoming draft power difficulties in the railroad sector.

DISTRIBUTION, MOVEMENT OF GOODS CALLED KEY OF ECONOMY

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 28 Jul 81 pp 1,6

[Editorial: "The Distribution and Movement of Goods Are Right Now the Crucial Battlefield"]

[Text] In the present situation of Ho Chi Minh City, the distribution and movement of goods constitute the key link of the economy with an importance that reaches into many areas. This battle of the distribution and movement of goods is playing a decisive role as related to production and the people's living conditions, it is where the contradictions are concentrated, where the fierce struggle between the two ways of life, the socialist and the capitalist ways of life, is concentrated in a close link betwethe struggle between us and the enemy, with the struggle against the extremely vicious economic plots of the Chinese expansionists and the U.S. imperialists.

Since there had been a reorientation of the economic policies of the Party as expressed in many important resolutions, especially in Resolution 26 of the Politburo, our city has undergone a positive transformation in the area of distribution and movement of goods. The socialist commerce of the city, including both the state-run and the collective sectors, has made a number of efforts in the direction of extending itself into the regular business and trade in the marketplace and overcoming gradually the bad habit of administrative interference. If we take the procurement of commodities at their sources to be the most important activity of socialist commerce then in the first six months of this year the amount of business brought in by the state-run commerce sector is equivalent to 384 percent of the same item during a similar period in 1980 and the one brought in by the cooperatives is equivalent to 207 percent of the same item for the same period last year.

This step forward in the right direction is extremely encouraging but it is still not consonant with what the situation requires, faced as it is with all the great challenges ahead. We are talking about an extensive "free" market that is constantly aggressing into the socialist market and does not cease to impact on the living conditions of the laboring people in all their negative aspects, not only from the economic point of view but also from the point of view of politics, social impact, public security and national defense. The organizational and management structures that are still very vulnerable to administrative interference with its irrational demands and requirements, still limit to no small extent our maneuverability and response capability, thus failing to give us the consolidated strength needed for victory on this front.

The "free" market, within a certain limit, is a necessity. But this is entirely different from the "free" market which is operating at the present scale and in the present forms, in which there is also an illegal "balck market" which on a daily basis is attacking both the producers and the consumers, disrupting the market and price system, disrupting also the public security, occupying both roadway and pavements, always done on the sly, going so far as to challenge both the law and public order, cheating the producer with all sorts of tricks and picking on the pockets of the consumers through every kind of sleight-of-hand. The enemy of our people seeks every way, both "legal" and illegal, to send in foreign goods in large, huge amounts so as to give more strength to the "free" market while developing all its negative expressions.

Production, the living requirements and socialist edification do not permit our people to accept such a situation. The limits here must be clearly drawn. We respect and help private individuals engaged in trade and services who know how to respect the laws, carry out their activities in broad daylight and honestly, especially those poor people who have to peddle and hawk their wares, thanks to which they have their honest labor. But our compatriots, including a number of those engaged in honest private business, resolutely condemn and sanction the smugglers, the producers and consumers of fake merchandise, the speculators who compete with the state in the procurement of goods, tricky and cheating activities, price hikes, and tax evasion. At the same time our people is realizing more and more clearly every day that socialist commerce is precisely what will save our laboring people, serve our living standards and production. Our compatriots ask that socialist commerce--both the state-run and the collective sectors--rapidly overcome its mistakes and shortcomings; they may sometimes severely criticize it but that is an internal matter of the laboring people, which is something entirely different from their opposition to the negative expressions of the "free" market. Where do we stand? On the side of the socialist market or on the side of the socalled "free" market? That is a question of principle which must be put to oneself by each Party member, each cadre and each laboring person.

The present situation keenly requires a truly revolutionary transformation in the distribution and movement of goods from both the point of view of ideology and organization. A transformation that adequately insures the effective implementation of the guiding principles provided by the Party chapter: the state-run commerce must essentially move into business forms while at the same time guaranteeing the supply of essential commodities to salaried sectors and to the consumers in timely fashion and in accordance with the set criteria both quantitative and qualitative. For the sake of the laboring people's living standards and for the interest of production, it is recommended that from now until the end of the year socialist commerce progress until it takes over 50 percent of the social market while at the same time controlling more of the essential commodities, wresting an absolute superiority on this score.

An extremely heavy and glorious responsibility is being put on the shoulders of the socialist commerce sector and on the other branches of distribution and movement of goods. Procurement and the control of sources constitute a life-and-death struggle to reach the goals we are setting for ourselves. Procurement and control of sources require that we have a very agile, flexible, and sharp, well-oiled machinery that works hand in hand with production and is always ready to serve production. Procurement and the control of commodity sources must be based on the agreement of many sectors linked up by the distribution and movement of goods, in production and in many other ways. There must be reorganization and close coordination between production and distribution and movement of goods so that both sectors walk hand in hand, struggle together and not "back to back." At the same time there must be reorganization so that there is closer coordination among the various echelons, between Ho Chi Minh City and the provinces, leaving no loopholes that can be taken advantage of by bad elements.

Together with its function of serving the living standards of the people, the distribution and movement of goods must have also the responsibility of boosting the development of production. The distribution and movement of goods must be closely linked with production, it must first of all take care of the producers and do nothing that would impede production; it should not go after business only, after profit only to the detriment of production.

Our city still has five economic components at work together. It must be clearly determined that all five components must form one unified economic structure under the leadership of the state-run economy, and they all must serve our nation-building and the edification of socialism. We must promote the positive aspects of the non-socialist elements, reorganize and rearrange them, and have rational and reasonable policies towards them. At the same time we must struggle to limit the negative aspects of such elements, including those organizations that may be called "collective" but in actuality can in no way be called socialist. To wrest victory for the work of distribution and movement of goods one cannot separate it from the continuation of socialist reform of the privately run economy. In handicraft and cottage industry production, in the individual and privately run business sector and even in the newly collectivized sector, the negative expressions which usually come with such small production forms are ceaselessly drawing them out of the orbit of socialism. In the distribution and movement of goods the tens of thousands of small businesses in the city for the most part are being the legs of the milliped formed by the dishonest tradesmen and speculators in order to disrupt the market. The rearrangements and socialist reform of the handicraft and small industry sector must be aimed at insuring that socialist commerce control the vast majority of their products. The state-run commerce and the cooperative commerce must put forth appropriate forms of organization so as to reorganize step-by-step the small businesses, thus forming a vast network that would constitute the millipede of socialist commerce. At the same time the organs in charge and our compatriots resolutely rearrange the flea markets, clean up all forms of unorganized trade on the roadways and pavements, thus creating favorable conditions for market management and price stabilization, and isolating and eliminating the dishonest tradesmen, speculators and hoarders.

We still have many, extremely many difficulties and obstacles in front of us in our struggle to manage the market and wrest the upper hand on the distribution and movement of goods front, wresting victory for socialism on this important battlefield so as to solidly insure the stabilization and improvement of the people's living standards. The conditions working in our favor are also very significant. We have sized up the problems correctly, we are pushing the economy into the right tracks and struggling in order to unravel step by step the knots and obstacles so as the facilitate the economy's quick adaptation into the orbit of socialism. We have the strength of a proletarian dictatorship government and of the collective ownership of the laboring people. We have the socialist forces not only in our city but also in the whole country and in the sister provinces which are ready to cooperate with us. Armed with a new understanding and reorganized in a fine and simultaneous manner, we will have vast strength which at the same time is effective thus allowing us to rearrange into an entirely new bettleline that will make it possible to totally reverse the situation.

YOUTHS VOLUNTEER TO WORK ON MEKONG DELTA FARMS

BK210355 Hanoi NHAN DAN in Vietnamese 4 Oct 81 p 1

[Text] Following the joint resolution reached between the Ministry of Agriculture and the Ho Chi Minh Communist Youth Union Central Committee on motivating youths to be in the van in exploiting and building the Mekong River Delta and the rice-growing area north of Ha Tien City, Kien Giang Province--a task designed for communist youths through the country--youths in various localities have coordinated with the agricultural sector in organizing conferences to discuss measures to implement this resolution. They have discussed the task in length and have written petitions to work voluntarily in the Mekong River Delta area.

According to incomplete statistics, about 8,990 youths have volunteered to work and build state farms in the Mekong River Delta area. These youths come from nine leading localities comprising Ha Nam Ninh, Thai Binh, Vinh Phu, Ha Bac, Hai Hung, Ha Son Binh and Nghe Tinh Provinces and Hanoi and Haiphong municipalities.

The Youth Union in Ha Nam Ninh Province has motivated and selected capable youths to work in the rice-growing area north of Ha Tien City. The province has formulated concrete plan to help the 858 state farms north of Ha Tien, its sister unit.

At present, a number of state farms have embarked on production and each has planted from 500 to 1,000 hectares of rice.

HEALTH, EDUCATION AND WELFARE

COMMITTEE ISSUES ETHICS EDUCATION DECISION

BK210644 Hanoi NHAN DAN in Vietnamese 5 Oct 81 pp 1, 4

[Text] On 24 September, the Central Educational Reform Committee issued a decision on continuing the campaign to intensify the teaching of revolutionary ethics in schools. Following is the full text of the decision:

The campaign to intensify the education in revolutionary ethics in schools has achieved some initial results over the past 2 years. Experiences have shown that the campaign attained tangible results in those schools where the school board and teachers demonstrated high resolve, worked according to concrete plans and received the attention of the local party committees and administration. Generally speaking, however, the campaign has not been carried out widely and its results have fallen short of expectations.

At the proposal of the National Assembly Culture and Education Committee and various sectors responsible for educational work, the Central Educational Reform Committee has decided to continue pushing forward the campaign to intensify the education in revolutionary ethics in all schools. The campaign is aimed at the following objectives:

On the basis of satisfactorily advancing the five teachings of Uncle Ho, namely "love your fatherland and compatriots; study and work well; foster unity well; maintain good discipline; practice hygiene well and be modest, honest and courageous," we must help students achieve tangible progress in practicing politeness, cultivating a sense of order and discipline--discipline in study--fostering solidarity, and in studying.

We must make the education in revolutionary ethics a regular task of all schools and a part of all educational activities. We must creatively and steadily carry out the campaign so as to match the actual conditions of each school, each class and each period of time. We must attach importance to satisfactorily organizing student collectives in schools, as well as in extramural activities.

The object of the campaign for education in revolutionary ethics in schools is the students at all levels, from kindergartens, general schools, supplementary education schools, normal schools, vocational schools and vocational middle schools to advanced schools and colleges.

In fostering education in revolutionary ethics in schools, especially in the south and border areas, we must pay due attention to combining it with political education so as to enhance students' understanding of socialism and to contribute to frustrating the psychological warfare activities of all enemies and countering the harmful influences of the decadent culture left behind by the old regime.

In accordance with this spirit, the Ministry of Education, the Ministry of Higher and Vocational Middle Schools and the General Vocational Training Department must review all experiences in the education in revolutionary ethics and promptly guide all schools in devising measures aimed at promoting this task. They must promulgate regulations concerning teaching, study and school discipline, and establish a reward and penalty system and ethical norms for use in determining the results of graduation examinations and deciding students' grades.

Educating students in revolutionary ethics is a task of extremely important significance which contributes to fostering the younger generations who will carry on the revolutionary cause of our nation. To do this work well, all educational sectors must coordinate with other sectors concerned, the mass organizations and the parents associations, so as to achieve unity of action in this important educational task.

All school management cadres, teachers, cadres in charge of trade union work in the educational sector, cadres responsible for Ho Chi Minh Communist Youth Union [HCMCYU] and Ho Chi Minh Vanguard Teenagers Unit activities in schools and other school cadres and personnel must set good examples in revolutionary ethics for the younger generations.

The HCMCYU must take the initiative in developing dynamism and creativity in educating the younger generations through various campaigns suitable for the psychology of youths and teenagers.

The Vietnam Confederation of Trade Unions must continue to guide grassroots unions in educating students. The Vietnam Women's Union must continue to promote the movement for new-culture families and coordinate with schools in educating students in revolutionary ethics.

Party organizations and the administration at all levels are responsible for closely guiding the campaign and must work in coordination with the various social forces and schools to turn the campaign into a regular activity and to help it achieve practical results.

The Ministry of Education, the Ministry of Higher and Vocational Middle Schools and the General Vocational Training Department are responsible for efficiently conducting the campaign and guiding its implementation in pilot areas so as to gain experience. They must regularly review the results of their efforts at the end of each school term or each class and promptly report their experiences to the Central Educational Reform Committee.

On the same day, 24 September, the Central Educational Reform Committee issued a decision on some questions about reforming the training and use of the contingent of general school teachers.

PARTY DIRECTIVE ON SUPPLEMENTARY EDUCATION OF CADRES, YOUTHS

Hanoi NHAN DAN in Vietnamese 18 Sep 81 p 1

[Text] On 7 September, the Party Central Committee Secretariat issued a directive on stepping up the supplementary education of cadres and outstanding youths. The directive says:

"In executing the party directives and resolutions on the supplementary education of cadres and laboring people, the education sector and many localities have reaped some good results.

"However, a number of members of party committees at different echelons and leading comrades at various levels in many sectors and production installations including the education sector have failed to clearly realize the importance and urgency of this task and to pay due attention to the need to provide leadership and guidance. At present, there still are very few outstanding youths and cadres--especially the hard-core cadres--who attend supplementary education courses so that the cultural standard of many cadres and youths across the country, especially in South Vietnam and the mountainous regions, is still low. This situation has hampered the assimilation of science and technology as well as the understanding and implementation of the party line and policy concerning all fields of activity."

Therefore, the Secretariat has decided on the following policies and measures:

The struggle target is to rapidly raise the cultural standard and to soon reach a point where most cadres aged under 45 at all echelons and outstanding youths have a general middle school education level. The immediate task from now to 1985 is to make sure that cadres and outstanding youths in all regions reach the following levels:

--In the delta and midlands of North Vietnam, cadres at various echelons must at least complete the basic general education curriculum. Of these cadres, the grassroots ones who represent about 30 percent, the district-echelon ones who represent 70 percent and almost all provincial cadres must complete the general middle school curriculum.

--In the delta of South Vietnam, grassroots cadres must at least complete the Grade 5 curriculum and about 70 percent of them must complete the basic general education curriculum. District and provincial cadres must at least complete the basic general education curriculum and about 50 percent of them must complete the general middle school curriculum.

--In the ethnic minorities' regions, grassroots and district cadres must at least complete the Grade 5 curriculum. About 30 percent of the total number of district cadres must complete the basic general education curriculum. Provincial cadres must at least complete the basic general education curriculum and about 30 percent of them must complete the general middle school curriculum.

In the deltas and midlands, young cadres and outstanding youths must try to rapidly complete the general middle school curriculum; those in the ethnic minorities' regions must try to complete the basic general education curriculum while a number of them must advance to the general middle school curriculum in order to be able to continue study in colleges and vocational schools.

It is necessary to soon work out a plan to provide supplementary education for cadres and outstanding youths and to arrange its proper implementation.

The network of supplementary schools and courses designed for cadres and outstanding youths must be consolidated and expanded.

Localities must strengthen schools and courses and open them under appropriate forms.

Each province and district must have concentrated supplementary education schools for cadres and outstanding youths and semiconcentrated supplementary education schools for those who need improve their cultural standard but do not have the necessary conditions to attend concentrated schools.

On-the-job supplementary education schools and courses including courses reserved especially for cadres must be opened on a regional basis or among interagencies and joint enterprises. As for a number of key cadres at the provincial and district level who are too busy doing their jobs, it is necessary to assign special teachers to coach them and guide their self-teaching efforts.

Supplementary education courses must be opened in schools belonging to the party, to various sectors and to mass organizations in order to improve the cultural standard of students before they begin learning political theories and special skills.

In the areas inhabited by ethnic minorities, each province and district or joint district must have ethnic minority youth schools to provide supplementary education for young tribal cadres and for tribal youths. The greatest attention must be paid to recruiting tribal students from the highlands and remote and border areas.

Work-study supplementary education schools must be developed at the grassroots level for the benefit of young cadres and outstanding youths.

The Ministry of Education must soon promulgate regulations on supplementary education schools and supply them with teaching equipment and tools on a priority basis.

It is also necessary to strengthen the contingent of managerial cadres and supplementary education teachers, to improve curricula and teaching subjects and methods, to clearly define the obligation to study, and to formulate systems and policies aimed at encouraging cadres and youths to study.

Cadres--especially the hard-core ones--and the youths must clearly understand that studying and improving their cultural standard is one of their duties and responsibilities in building socialism. If learning is still possible at his age and if he does not have the fixed cultural standard, every cadre--no matter whatever his position and job--must try to overcome difficulties and to set good examples in learning at the above-mentioned schools and courses.

In employing and promoting cadres, it is important to apply cultural criteria and standards.

Finally, the directive points out that party and people's committees at various echelons, the education sector, the Ministry of Higher and Vocational Education, the Ho Chi Minh Communist Youth Union and other sectors are responsible for intensifying the supplementary education of cadres and outstanding youths.

DIRECTIVE ON INCREASING SUPPLEMENTARY EDUCATION

BK161637 Hanoi NHAN DAN in Vietnamese 18 Sep 81 p 1

[Text] The VCP Central Committee Secretariat on 7 September issued a directive on accelerating supplementary education among cadres and elite youth. The directive says:

"Implementing party directives and resolutions on supplementary education among cadres and workers, the educational sector and many localities have scored some fine achievements.

"However, the leaders of party committee echelons, sectors, production establishments and the educational sector are not aware of the importance and urgency of this task. They have not paid proper attention to supervising its implementation. At present, very few cadres, elite youth and core cadres are attending supplementary education classes. The educational background of many cadres and youths throughout the country is still limited, especially in the south and the mountainous areas. This has made it difficult for them to apply scientific and technological advantages and implement the party line and policies in all domains."

The VCP Secretariat adopted the following policies and measures:

Target of struggle: Urgently improve the educational backgrounds of cadres 45 years old and younger and elite youth by having them finish general high school classes. From now until 1985, cadres and elite youth in all localities must acquire the following educational backgrounds:

--In the northern delta and midlands: Cadres of all echelons must, at least, complete the basic general education curriculum. This involves about 30 percent of grassroots-level cadres and 70 percent of district cadres. Almost all provincial cadres must complete general high school.

--In the southern delta: Grassroots-level cadres must, at least, finish grade 5 and about 70 percent of them must complete the basic general education grades. District and provincial cadres must, at least, complete their basic general education and 50 percent of them must finish general high school.

--In areas where tribesmen live: Grassroots and district cadres must, at least, complete grade 5; about 30 percent of district cadres must complete their basic general education. Provincial cadres must, at least, complete their basic general education; about 30 percent of provincial cadres must finish general high school.

Young cadres and elite youth in the delta and midlands areas must strive to finish general high school quickly. In ethnic minority areas, they must strive to complete their basic general education. Some of them must finish the general high school curriculum in order to be able to further their studies in colleges and vocational schools.

Supplementary education for cadres and elite youth must be planned quickly and carried out satisfactorily. Supplementary education schools and classes must be consolidated and expanded for cadres and elite youth.

Localities must consolidate or build more schools and classrooms. Each province and district must build full-time supplementary education schools for cadres and elite youth and part-time schools and classes for those who need to study but have no chance to attend full-time schools.

On-the-job supplementary education schools and classes should be organized for each area or each joint organ and enterprise with separate classes for cadres. Special teachers should be assigned to help a number of busy leading provincial and district cadres in their self-study.

Supplementary education classes should also be organized in the schools of the party, sectors and mass organizations to help cadres and elite youth improve their knowledge before they engage in studying political dialectics and other specialized matters.

In ethnic minority areas, each province and each district or inter-district grouping must set up ethnic youth schools to provide supplementary education for young cadres and ethnic youths.

Special attention must be paid to enrolling students from various tribal communities in the highlands, in the remote areas and in the border areas.

Supplementary work-study education schools must be built for young cadres and elite youth in the localities.

The Ministry of Education must promptly promulgate regulations on supplementary education schools and provide them with equipment and teaching aids.

Moreover, the body of managerial cadres and supplementary education teachers must be strengthened. Teaching programs, subjects and methods must be improved. It is necessary to make supplementary education obligatory among cadres and youth and to adopt policies to encourage them to further their studies.

All cadres, especially leading cadres, and elite youth must clearly realize that to improve their cultural background is an obligation and a responsibility in the building of socialism. Each cadre, in whatever position, must strive to overcome difficulties in exemplarily attending supplementary education classes if he is still of study age and if his cultural background falls short of the set limits.

In assigning and promoting cadres, their educational backgrounds must be taken into consideration.

Finally, the directive specifies the responsibilities of party and people's committee echelons, the educational sector, the Ministry of Higher and Vocational Education, the Ho Chi Minh Communist Youth Union and the sectors concerned in accelerating supplementary education among cadres and elite youth.

CONFERENCE HELD ON NEW LIFESTYLE MOVEMENT

BK130953 Hanoi QUAN DOI NHAN DAN in Vietnamese 16 Sep 81 p 1

[VNA report]

[Text] In Ho Chi Minh City, the Central Committee for the Guidance of the New Lifestyle Movement has recently met with the guidance committees of southern provinces and cities from Thuan Hai southward to review the status of the new lifestyle movement and to discuss measures aimed at strengthening the guidance of this movement in the coming period.

Since liberation, the southern provinces and cities have undergone many social changes. Following the issuance of Circular No 113 by the VCP Central Committee Secretariat on shaping a new lifestyle nationwide, the provincial and city party committees as well as the people's committees of all southern provinces and cities have paid attention to guiding the promotion of a new lifestyle. Many provinces and cities have set up committees for the guidance of this task. The movement for a new lifestyle has been maintained and further enhanced.

The movement, however, has not yet developed evenly and continuously. It has also failed to exert a strong impact on the efforts to curb the negative aspects of life and to attract the participation of a large number of sectors, mass organizations and social forces. All provinces and cities have attached more importance to combating negative factors than to promoting positive ones and have not succeeded in motivating public opinion to support the new, the civilized and the progressive, and to criticize the old, the backward, the outmoded, the imitation of things foreign and the grotesque.

To step up the movement for a new lifestyle in accordance with VCP Central Committee Secretariat Circular No 113 and in conjunction with the struggle to wipe out the vestiges of reactionary and decadent culture, the conference clearly defined the tasks to be carried out in the coming days. These tasks call for the shaping of a new lifestyle and the promotion of public order and sanitation in the cities. Special attention must be given to the promotion of civilized living, courtesy and clean and beautiful streets. In the rural areas, efforts must be concentrated on guiding the promotion of public order and sanitation as well as the building of civilized, clean and beautiful villages and hamlets. Propaganda campaigns must be actively launched to abolish outmoded customs in wedding and funeral ceremonies and to combat superstition in conjunction with the struggle to do away with the vestiges of reactionary and decadent culture.

Efforts must be made to promote the shaping of new-culture families in which all members live in harmony, birth control is practiced and party and state policies are adhered to in an exemplary manner. A socialist lifestyle must be cultivated among all citizens and young people must be motivated to serve as activists in this undertaking. Special efforts must be made to curb excessive drinking and feasting, a social vice prevalent in all southern provinces. In carrying out the movement for a new lifestyle in the south, all localities must strictly adhere to the following guidelines: Implement the movement persistently, actively and gradually; achieve the movement's targets one by one before advancing to fulfill all of its objectives; motivate the masses to condemn and criticize the old and to build the new; refrain from using crude coercive measures; closely follow the people's needs in daily life while carrying out the new lifestyle movement; coordinate this movement with other local movements; and strive to attract the participation of the large masses of social forces in accordance with the principle that the party leads, the administration organizes and manages, and the mass organizations carry out the movement.

GIAP SPEAKS AT COLLEGE ANNIVERSARY CEREMONY

BK201015 Hanoi Domestic Service in Vietnamese 2300 GMT 19 Oct 81

[Text] Hanoi Teacher's College No 1, one of the old, large colleges in Vietnam, recently held a solemn ceremony to mark its 25th founding anniversary--1956-81. Vo Nguyen Giap, member of the VCP Central Committee Political Bureau and vice chairman of the Council of Ministers, attended and spoke at the ceremony.

In a speech delivered at the ceremony, (Pham Qui Tu), rector of the college, reported on the great achievements scored by the college during its building and maturation. Over the past 25 years, the college has trained almost 20,000 teachers, thus helping the educational sector significantly in its task of developing general high school education.

Along with producing graduates, Hanoi Teacher's College No 1 has also scored initial satisfactory results in the task of training postgraduate students, conducting research in science and technology to serve various training, production and national economic and cultural development programs.

Speaking cordially at the ceremony, Vo Nguyen Giap, on behalf of the VCP Central Committee and the Council of Ministers, praised the college for its great achievements scored over the past 25 years. After reviewing these achievements, Vice Chairman Vo Nguyen Giap pointed out the college's shortcomings and weak points and urged it to strive to overcome these difficulties to surge forward to fulfill its political task satisfactorily.

He said: Hanoi Teacher's College No 1 is one of the leading colleges which is striving to build its reputation as a key and an exemplary college of the educational sector. To achieve this goal, the college must make great efforts in improving the quality of training and must regard this as a key factor. Pham Van Dong, chairman of the Council of Ministers and chairman of the Central Committee for Educational Reform, has said: The quality of training at present is still low. This has not only affected the graduate teachers directly, but also has affected indirectly, on a long-term basis, the quality of the general educational level, and even the future college level. The quality of teaching must be improved comprehensively, especially in politics and ideology and Marxism and Leninism in order to train teachers to develop patriotism and the love of socialism, to provide them with vast knowledge and build in them the socialist personality.

Minister of Education Mrs Nguyen Thi Binh, on behalf of her ministry, said that in the days ahead, Hanoi Teacher's College No 1 will strive to fulfill its plan norms and improve its teaching quality more satisfactorily. As an immediate task, the college will carry out satisfactorily the campaign to strengthen the teaching of revolutionary ethics in various schools. She said: The college's teaching staff and students will strive to materialize President Ho's remark made during his visit to the college that efforts must be made to build this school not only into a teacher's college but also a model college of the nation.

MEDICINES REPORTED 'CRITICALLY SCARCE'

BK191415 Hanoi Domestic Service in Vietnamese 2300 GMT 18 Oct 81

[From the review of NHAN DAN for 19 October]

[Text] In its page 4 column dealing with health, NHAN DAN today carries an article entitled "The Problem of Medicine" by Prof Nguyen Van Dam, deputy minister of public health. The article says:

Ensuring sufficient medicine for the prevention and treatment of diseases is a pressing problem of concern to everyone, and the public health sector is striving to solve this problem in an intensive manner. As a consequence of 30 years of war and partly due to shortcomings in terms of guidance and management, we have encountered great difficulties in the production and distribution of a number of medicines. In addition, the lack of coordination among the sectors concerned has made medicine critically scarce.

How to ensure a sufficient supply of prophylactic medicines--especially such ordinary medicines as first-aid drugs and anti-epidemic medicines--remains a relatively complex question which must be examined thoroughly and solved gradually and steadily. In so doing, it is necessary to create the source of the medicine, distribute it directly to the consumers, and provide guidance for producing it and using it in accordance with the requirements.

The article then points out three particular measures to solve these problems:

1. Expand the movement for self-sufficiency in traditional medicine.

2. Dispense medicine containing raw materials obtainable in the country.

3. Improve the distribution of pharmaceutical products.

Dealing with the need to improve the distribution of pharmaceutical products, the article says: Poor management which leaves many loopholes in the process of production, circulation and distribution together with the loss incurred under various forms in the process of consumption have caused an even greater shortage of medicines.

The public health sector is launching a campaign to use medicines rationally and safely among all medical and pharmaceutical establishments while combining the formulation and implementation of operational regulations and systems in an effort to instill in the people's medical cadres a sense of responsibility and professional conscience. In addition, the sector is stepping up the struggle against negativism while intensively managing and preserving the stocks of medicine along with controlling the stock of medicine on the local market so as to gradually overcome the situation where medicine is sold illegally, as well as to severely punish those engaged in producing fake medicines or practicing medicines illegally under various forms to deceive the people.

This work is being carried out vigorously in all municipalities and cities under the close guidance of leading cadres at the provincial and municipal levels and with the close coordination of the public security, trade and tax sectors in a unified plan for the control of the market in each locality.

REACTIONARY, DECADENT CULTURAL MATERIALS CONFISCATED

Hanoi NHAN DAN in Vietnamese 19 Sep 81 p 2

[Article by Dang Minh Phuong: "Quang Nam-Da Nang Province Eliminates Reactionary, Decadent Cultural Materials"]

[Text] Between mid-June and early August, Quang Nam-Da Nang Province as a whole confiscated nearly 3,000 music tapes, nearly 900 records, tens of thousands of books and pictorial magazines and nearly 100 movies and many pictures of decadent and reactionary contents, the publications and pictures that had been circulated during the U.S.-puppet rule and also the ones that have just been secretly brought into the country from the capitalist countries.

The Municipality of Da Nang seized many music tapes, records and publications of decadent contents from 50 stores selling tape recorders and cultural materials. More than 100 privately-owned coffee shops had been playing, sometimes openly sometimes secretly, golden music and decadent music for customers. Tam Ky District arrested a man in Cay Tram Market for having kept very many reactionary and decadent books, which filled three ox-carts.

Those people whose occupation was to disseminate reactionary and decadent cultural materials all had a background of counterrevolutionary activities. Some of them showed decadent movies to make money, but others only "invited" people to see them free just to deprave the young people. For some time they had been using many tricks to hide their evil activities, but finally the latter could not avoid the people's ears and eyes. Many were caught red-handed while renting books, turning decadent music on or showing decadent movies.

In the Municipality of Da Nang there was Nguyen Van Phuc. His house sits on a dirty water hole, in the real sense of these words. The house has seven rooms and even false walls and doors to hide those things that were a thousand times dirtier than the water underneath its floor. He had been a lackey of the French colonialists and then the American imperialists for 20 years. After the day of liberation, in spite of the leniency of the revolutionary administration, he refused to do reformatory work and still secretly kept the occupation of disseminating decadent and reactionary cultural materials and poisoning the youths' minds. He rented, sold and showed decadent movies. At the time he was arrested, there were in his house 80 decadent movies; many projectors, cameras, recorders and decadent records and music tapes; and very many pornographic pictures, including those taken of himself with prostitutes. His house was fully equipped with the means of projecting, viewing films, etc. The hoodlums and depraved people, remnants of the old society, who had gathered in clandestine "playboy clubs," usually referred to him as "that playful old goat."

Quang Nam-Da Nang Province at the same time was educating and forcing those who were earning their living by practicing superstition to give up their occupation.

The people of Tam Ky City have denounced Pham Thi Hue who was practicing superstition for 18 years. When she was young, she had a normal face. But then she intentionally made the left side of her face dark, pulled her cheek down, made her hair as stiff as bamboo roots and grew it excessively long to look awful. She tried to change her look in order to practice her trade more easily and to cheat those people who would readily believe her to get their money.

With the pieces of evidence confiscated and the confessions of those who had intentionally been disseminating reactionary and decadent cultural materials, the people of all walks of life in the province have more clearly recognized the crafty design of the enemy and clearly seen the insidious act of the American imperialists and Beijing expansionists using various kinds of reactionary and decadent cultural materials to poison the minds of the youths and teenagers and to undermine the new life of our people. Some people who kept epic novels, pornographic materials and books of unhealthy contents have voluntarily surrendered them to the administration. Others have been actively taking part in denouncing those who rent decadent books and teaching their children and grandchildren that they should bring to subwards and villages any decadent and reactionary books whenever they may have found them.

INFORMATION ON VIETNAMESE PERSONALITIES

[The following information on Vietnamese personalities has been extracted from Vietnamese-language sources published in Hanoi, unless otherwise indicated. Asterisked job title indicates that this is the first known press reference to this individual functioning in this capacity.]

Cù Huy Cận [CUF HUY CAANJ]

Vice President and *Secretary General of the Vietnam Federation of Arts and Letters; attended a conference at the Federation's headquarters on 16, 17 and 18 April 1981 to discuss the building of provincial and municipal associations of arts and letters in the north. (SAN KHAU No 3, May-Jun 81 p 107)

Hoàng Bảo Châu [HOANGF BAOR CHAAU], Asst Prof

*Acting chief of the Institute of Popular Medicine [Vien Y Hoc Dan Toc], Ministry of Public Health, in Hanoi; is a member of a central-level steering committee for popular medicine formed on 11 March 1981. (TAP CHI DONG Y No 169, [Mar-Apr] 81 p 24)

Nguyễn Ứng Chiếm [NGUYEENX UWNGS CHIEEMS]

*Chief of Cabinet of the Physical Education and Sports General Department; on 23-26 August 1981 he was scheduled to attend the Non-aligned Nations Physical Education and Sports Conference in Tripoli, Libya. (THE DUC THE THAO 22 Aug 81 p 8)

Tạ Quang Chiến [TAJ QUANG CHIEENS]

Deputy Head of the Physical Education and Sports General Department; on 14 August 1981 he attended a field and track meet. (THE DUC THE THAO 22 Aug 81 p 8)

Lê Đức Chỉnh [LEE DUWCS CHINHR]

Head of the Physical Education and Sports General Department; on 5-7 August 1981 he attended a conference in Vinh for units and individuals achieving noteworthy accomplishments in physical education and sports. (THE DUC THE THAO 15 Aug 81 p 1)

Đào Minh Đệ [DAOF MINH DEEJ]

Deputy Chief of the Department of Supplementary Education, Ministry of Education; he is the author of an article in the cited source entitled, "Issues Drawn From the Conference to Review the Campaign to Implement the 'Cultural Initiatives' Program During the Three Years 1978-1980." (BO TUC VAN HOA No 1-2, Jan-Apr 81 pp 1-2 & 7)

Nguyễn Hộ [NGUYEENX HOOJ]

Vice President of the Vietnam Confederation of Trade Unions; on 14-15 August 1981 he attended a conference in Ho Chi Minh City on accomplishments in south Vietnam in sports and physical education. (THE DUC THE THAO 29 Aug 81 p 2)

Nguyễn Văn Hường [NGUYEENX VAWN HUWOWNGF], Prof

*Deputy Director of the Office of the Council of Ministers [Van Phong Hoi Dong Chinh Phu], spoke on the VCP Political Bureau's resolution on science and technology policy at the Club of the Vietnam Socialist Party on 12 June 1981. (TO QUOC No 7, Jul 81 p 12)

Nguyễn Thế Hữu [NGUYEENX THEES HUWUX]

*Deputy Secretary of the VCP Committee, Dong Thap Province; on 3 August 1981 he attended a sporting event in his province. (THE DUC THE THAO 15 Aug 81 p 1)

Nguyễn Đình Lan [NGUYEENX DINHF LAN]

*Chairman of the People's Committee, Tan Yen District, Ha Bac Province; his article on the livestock contracting system in his district appeared in the cited source. (NHAN DAN 16 Sep 81 p 2)

Dương Bạch Liên [ZUWOWNG BACHJ LIEEN]

Vice Minister of Communications and Transportation; on 31 July 1981 he attended a meeting to develop plans in support of the upcoming 5th Congress of the VCP. (GIAO THONG VAN TAI 10 Aug 81 p 2)

Trần Đức Lương [TRAANF DUWCS LUWOWNG]

Head of the Geology General Department; on 15 September 1981 he was in Prague to sign an agreement between the SRV and Czechoslovakia for cooperation in geological fields. (NHAN DAN 18 Sep 81 p 4)

Hoàng Mai [HOANGF MAI]

*Deputy Head of the Forces Building General Department [Tong cuc Xay dung luc luong], Ministry of Interior; on 14 August 1981 he attended a field and track meet. (THE DUC THE THAO 22 Aug 81 p 8)

Trần Đức Nguyên [TRAANF DUWCS NGUYEEN], Deceased

Born in 1910; former Secretary of the VCP Committee, The Canned Fish Factory, Ministry of Marine Products; a member of the VCP since before 1945; he was in retirement at the time of his death on 14 September 1981 at age 71. (NHAN DAN 16 Sep 81 p 4)

Đào Văn Nhường [DAOF VAWN NHUWOWNGJ]

Head of the River Transportation Department, Ministry of Communications and Transportation; his article "Building and Developing the River Transportation Sector in Accordance With the Needs of the Nation and the Vietnamese People" appeared in the cited source. (GIAO THONG VAN TAI 10 Aug 81 p 1)

Nguyễn Tấn Phát [NGUYEENX TAANS PHATS], *Lieutenant Colonel

*Deputy Military Commander, Dong Thap Province; on 3 August 1981 he attended a sporting event in his province. (THE DUC THE THAO 15 Aug 81 p 1)

Nguyễn Tiến Phong [NGUYEENX TIEEN PHONG]

*Deputy Head of the Civil Proselytizing Department, VCP Central Committee; on 7-13 August 1981 he attended the 3rd Plenum, 4th Session of the Ho Chi Minh Communist Youth Union. (THIEU NIEN TIEN PHONG 21 Aug 81 p 3)

Tô Văn Sáng [TOO VAWN SANGS], Dr

*Acting chief of the Department of Popular Medicine [Vu Y Hoc Dan Toc], Ministry of Public Health; is a member of a central-level steering committee for popular medicine formed on 11 March 1981. (TAP CHI DONG Y No 169, [Mar-Apr] 81 p 24)

Bình Tâm [BINHF TAAM]

Minister of Communications and Transportation; on 14 September 1981 he attended the arrival in Hanoi of a Kampuchean delegation from the Ministry of Communications, Transportation, Post and Telecommunications. (NHAN DAN 16 Sep 81 p 4)

Lê Tâm [LEE TAAM]

*Vice Chairman of the State Science Commission [as published]; spoke on the VCP Political Bureau's resolution on science and technology policy at a discussion organized by TO QUOC magazine on 22 June 1981. (TO QUOC No 7, Jul 81 p 12)

Lê Thức [LEE THUWCS]

*Vice Minister of Mines and Coal; recently he spoke on using peat as a coal substitute. (HANOI MOI 26 Aug 81 p 3)

Phạm Hồng Tiến [PHAMJ HOONGF TIEENS]

*Deputy Chief of the Institute of Medicine and Pharmaceuticals [Vien Y Duoc Dan Toc], Ministry of Public Health, in Ho Chi Minh City; is a member of a central-level steering committee for popular medicine formed on 11 March 1981. (TAP CHI DONG Y No 169, [Mar-Apr] 81 p 24)

Nguyễn Xuân Trường [NGUYEENX XUAAN TRUWOWNGF]

Deputy Secretary of the VCP Committee, Dong Thap Province; Chairman of the People's Committee, Dong Thap Province; on 3 August 1981 he attended a sporting event in his province. (THE DUC THE THAO 15 Aug 81 p 1)

Lê Quang Vịnh [LEE QUANG VINHJ]

*Member of the Secretariat of the Ho Chi Minh Communist Youth Union; on 13 August 1981 he was elected to this position. (THIEU NIEN TIEN PHONG 21 Aug 81 p 3)

Phùng Văn Yên [PHUNGF VAWN YEEN]

Vice Chairman of the Fatherland Front Committee, Hanoi; on 15 August 1981 he attended an orientation program for orientation officers for the upcoming People's Council elections. (HANOI MOI 20 Aug 81 p 1)

WRONGDOINGS IN SOCIALIST PROPERTY MANAGEMENT PENALIZED

Hanoi GIAO THONG VAN TAI in Vietnamese 10 Aug 81 p 5

[Article based on a report by the newspaper LANG SON: "Severely Punish Violators of Socialist Property"]

[Text] The Lang Son Automobile Transportation Enterprise is one of the large enterprises in the province; it owns about 200 trucks and buses and employs nearly 450 cadres and manual and office workers. Since its founding, it has contributed to moving goods to promote production and combat activities and has served the traveling needs of the people. However, serious deviations have taken place in the enterprise and caused great losses and damage to the socialist property. To fight and eliminate negative practices, on 25 December 1980, the Provincial People's Court sat to try the following defendants: Luong Oanh, director of the enterprise; Duong Van Hung, deputy director of the enterprise; Cao Xuan Dat, deputy chief of the Transportation and Communications Service; Nong Thi Nhieu, acting head of the Accounting and Finance Office of the enterprise; Dao Ba Ninh, head of the Technical and Materials Office; Luong Thanh Hai, head of the Planning and Operational Office; Ngo Xuan Tuyet, head of the truck unit; Mai Hien, truck driver and Tran Thi Nhan, employee in charge of bus ticket sale.

The criminal acts of the defendants took place under various circumstances:

Enterprise director Luong Oanh failed to fulfill the responsibilities entrusted by the state; he allowed the personnel, vehicles, machines, property and money of the state to suffer losses and damage, the managerial system and principle of the enterprise to sustain sabotage and the contingent of cadres and manual and office workers to degenerate, which resulted in discrediting a socialist state enterprise through the following practices:

--Falsely declaring that the unfulfilled plan norms had been fulfilled, that unsettled accounts had been settled completely and that the 1979 state plan norms had been fulfilled in order to draw a sum of 73,000 dong and award it to cadres and manual and office workers.

--In 1979 and 1980, making 522,966.53 dong by selling 30 automobiles to agencies around the province; instead of depositing this sum in the budget and using it to pay back the borrowed capital to the bank, transferring it to the trust fund of the enterprise and then withdrawing 39.159 dong to defray festivals and reception parties at a time when cadres and manual and office workers in the collectivized section of the enterprise were living miserably.

--Irresponsibility in allowing vehicles, machines and a number of trailers to be taken away by the Chinese aggressors, in allowing some vehicles newly bought in 1978 to be destroyed after only a few months' use and in allowing a number of vehicles to be hit and overturned by accidents which cause a loss of more than 1 million dong to the state.

--Failing to deposit in the bank the money obtained from the sale of bus tickets and allowing many bus conductors to withhold ticket fares including Tran Thi Nhan, a cashier, to embezzle 8,000 dong.

--Loosely managing and recruiting laborers; using power and the influence of money in educating and using workers; allowing the enterprise to freely and illegally open drivers' recruiting and training courses, to form a contingent of bad workers and to found coteries, which resulted in hampering the implementation of the party policy and state law.

--Taking advantage of south-bound vehicle trips intended for some mission to carry out trading activities to make a profit and allowing the sale at a high price of the gasoline and oil intended for the vehicles' consumption during the trips and also the sale of many goods falling under the state management scope. Luong Oanh and Duong Van Hung issued traveling permits to traders to enable them to accompany the south-bound convoys to carry goods back and forth for commercial purposes. With his managerial knowledge and capabilities, Duong Van Hung, deputy director of the enterprise, misused the director's authority, committed dishonest acts, deliberately infringed all systems and principles and associated with bad elements inside and outside the enterprise to promote his individual interests to the detriment of the state politics and property. As proof, on 29 November 1979, he sent a message to the provincial authorities stating that the 1979 plan norms were overfulfilled though in reality they were not even fulfilled.

Cao Xuan Dat was promoted from the post of head of the Financial Office to that of deputy chief of the Transportation and Communication Service because of his managerial knowledge and specialized capabilities. When a provincial delegation came to inspect the Automobile Transportation Enterprise, he taught tricks to his subordinates, concealed their shortcomings and, on behalf of the Service, assured the delegation that what was inspected by it was true. He condoned and covered up illegal acts and even raised a secret fund at the Service's office to make unprincipled expenditures.

Despite her deficient technical skills and her limited knowledge of principles of expenditures, Nong Thi Nhieu, acting head of the Finance Office of the enterprise, did not try to correctly implement the financial system and principles. During the visit of the provincial inspection delegation, she joined others in opposing the delegation.

Instead of fulfilling their special functions, Luong Thanh Hai, Dao Ba Ninh, Ngo Xuan Tuyet and Mai Hien encroached on the state property and carried out commercial activities to make a profit when on mission in South Vietnam. During the visit of the provincial inspection delegation, Luong Thanh Hai sincerely reported these acts to the delegation and opposed other defendants in order to shed light on the case.

By virtue of the law on penalties for "violations of the socialist property" and other legal documents of the state, the Lang Son Provincial People's Court handed down the following sentences:

1. Duong Xuan Hung, 6 years in prison.

2. Cao Xuan Dat, 4 years in prison.

3. Luong Oanh, 2 years in prison.

4. Nong Thi Nhieu, 1 year in prison.

5. Dao Ba Ninh, 3 years in prison.

6. Tran Thi Nhan, 3 years in prison.

7. Luong Thanh Hai, 2 years of imprisonment with suspended execution of sentence.

8. Ngo Xuan Tuyet, 18 months of imprisonment with suspended execution of sentence.

9. Mai Hien, 18 months of imprisonment with suspended execution of sentence.

At the same time, the Court ordered the culprits to indemnify the state for its losses and to pay fines equivalent to the sums of money earned through illegal activities.

INTERNATIONAL RELATIONS, TRADE AND AID

COOPERATION BETWEEN VIETNAM AND WESTERN EUROPE DETAILED

Paris DOAN KET in Vietnamese 3 Oct 81 pp 1,8

[Article: "Cultural and Scientific-Technical Cooperation Between Vietnam and Western Europe"]

[Text] During the past several years, although relations in a number of spheres have encountered certain difficulties because of the vengeful activities ofthe U.S. and Beijing, Vietnam has maintained and in some respects developed its cultural and scientific-technical relations with many countries in Western Europe.

With France

As regards France, within the framework of the agreement regarding cultural and scientific-technical cooperation, signed 27 July 1977 on the occasion of an official visit by Premier Pham Van Dong, there has been cooperation in many spheres: the studying and teaching of French, medicine, and many scientific sectors, such as mathematics, physics, chemistry, and agriculture, as well as such technical sectors as oil, telecommunications, etc. Between the time the agreement was signed to the end of 1980, more than 200 Vietnamese students went to France for on-the-job training, and dozens of French specialists went to Vietnam to teach. That does not include more than 20 study trips Vietnamese specialists.

At the beginning of 1981, the Joint French-Vietnamese Committee on Cultural and Scientific-Technical Cooperation met in Hanoi to draft an exchange program more important than those of previous years, with more than 100 visits by French specialists to Vietnam and about 100 Vietnamese students going to France for on-the-job training, along with a number of delegations to study communications and transportation, electric power, universities, management, etc.

In the medical sector, France has agreed to accept 20 trainees and to send to Vietnam specialists in sanitation, epidemology, uncology, cardiology, hematology, and opthalmology. With regard to medicine, we must mention the important contributions of many French mass organizations, such as the French-Vietnamese Friendship Association, People's Aid, the Catholic Committee Against Hunger (C.C.F.D), etc., which have such important build a center for research on infant nutrition, help Vietnam produce glass for medical uses, etc.

The French government has also helped Vietnam set up a French language department at the Hanoi College of Foreign Languages, sent many French teachers to Vietnam, and received dozens of Vietnamese students to study French and study the teaching of French.

In addition to the cooperation between the two governments, there have also been cooperative agreements between colleges, such as between Paris VII and Hanoi University and between the Marseille Medical College and the Ho Chi Minh City Medical College. Cooperative agreements are now being concluded between the Grenoble Polytechnical Institute (I.N.P.G.) and the Vietnamese polytechnical schools and between Paris Sud-Orsay College and a Vietnamese University and there are good prospects that there will be cooperation between the French C.N.RS. and the Vietnam Institutes of Science.

It is necessary to stress the very important contributions to Vietnam by the Scientific-Technical Cooperation Committee in formulating and implementing cooperative programs.

With the new government, there are even more factors favoring the development of cultural and scientific-technical cooperation between France and Vietnam. The Minister of Science and Technology, J.P Chevenement, has declared to Ambassador Mai Van Bo that he is prepared to promote scientific-technical cooperation with Vietnam.

With Holland

Vietnam and Holland have set up a cooperative program between the universities of Amsterdam, Leyden, Wageningen, and Delft and the University, Polytechnic College, and Agricultural College of Hanoi, the Ha Bac Agricultural College, and Can Tho University covering 10 projects (two agricultural projects, two biology projects, three technical projects, and three physics-chemistry projects). The government of Holand has granted that cooperative program more than 4.5 million florins during the 1978-1981 period. Since 1978 more than 50 Dutch specialists have gone to work in Vietnam, and about the same number of Vietnamese specialists have gone to Holland for on-the-job training.

At present, the two parties are negotiating the 1982-1986 phase of scientific-technical cooperation between Holland and Vietnam. The Dutch organ in charge of cooperation with the NUFFIC college has recommended that the government of Holland spend 12 million florins in phase two.

In the medical and pharmacy sectors, six Dutch collages are cooperating with Vietnam. In 1977 the government of Holland granted more than 2.5 million florins for that sphere of cooperation. Since the beginning of 1978 more than 50 Vietnamese doctors and pharmacists have gone to Holland for training, and about 10 Dutch professors have gone to Vietnam to teach. In 1981, 10 Vietnamese students went to Holland and four Dutch professors went to Vietnam.

We have just learned that the government of Holland has agreed to grant a significant amount of money to continue such cooperation.

It must be stressed that the contributions in the fields of medicine, science, and technology of such Dutch mass organizations as the Holland-Vietnam Medical Committee and the Scientific-Technical Committee to Aid Vietnam, with their programs to fight malaria, equip a tractor repair shop, equip a film studio, etc.

With Belgium

In Belgium, there are now about 40 Vietnamese students studying in engineering schools under scholarships provided by the Belgian government.

Furthermore, by means of a number of nongovernmental organizations, such as the Cooperative Development Fund, Oxfam, etc, the Belgian government has granted money for a number of scientific-technical projects, such as a project to build two soil research stations in the Mekong Delta (10 million Belgian francs), a project to build a center for the training of day-care center teachers in Nha Trang (nearly 8 million Belgian francs), a project to expand a vegetable seedstock research center in Hanoi (about 8 million Belgian francs), etc.

The soil science faculty of the Catholic University of Louvain obtained four 4-year scholarships to train soil research cadres to use the researchstations provided by Belgium.

There is also cooperation in social research between the sociology faculty of Louvain University and the Vietnam Social Science Commission.

It has been learned that the Belgian-Vietnamese Association is forming a Committee for Scientific-Technical Cooperation with Vietnam in order to further cooperation.

The resolution regarding the scientific-technical policy approved by the Political Bureau of the Vietnam Communist Party, approved on 20 April 1981, advocated the strengthening of international scientific-technical cooperation and regarded that cooperation as being "a very important component of the state's scientific-technical policy." It is certain that that cooperation will increasingly develop.

SOVIET EDUCATION MINISTER ON TRAINING VIETNAMESE YOUTH

Moscow PRAVDA in Russian 28 Sep 81 p 4

[Interview with V.P. Yelyutin, minister of higher and secondary specialized education of the USSR: "Forge of Personnel"]

> [Text] The first group of Vietnamese young people arrived in the Soviet Union for training 30 years ago. V.P. Yelyutin, minister of higher and secondary specialized education of the USSR, talked with our correspondent about the development of cooperation between the two countries in the training of national personnel for the Socialist Republic of Vietnam.

[Question] What kind of specialists is our higher school training for fraternal Vietnam and how has interaction in this sphere developed in the past three decades?

[Answer] The first group of Vietnamese citizens was enrolled in the summer of 1951 for training in Moscow institutes—Steel and Alloys, Finance, Chemical Engineering, Medical and Engineering Construction--and also in the Machine Tool and Tool Tekhnikum. It consisted of 21 persons. Whereas for the 1981-1982 academic year, which has just begun, our VUZ's have accepted for training 1,027 Vietnamese, including 694 undergraduates, 99 graduate students and 209 trainees. The total contingent of young people from Vietnam being trained in our ministry's system is over 4,600. They are attending lectures and practical classes in 150 educational institutions of 33 Soviet cities. Such are the dynamics of the development of our relations in the field of the training of personnel for Vietnam.

Some 14,710 Vietnamese specialists have graduated in the past 30 years from the educational institutions of our ministry alone, not counting the educational institutions of the USSR State Committee for Vocational-Technical Education system and a number of other ministries and organizations. Soviet VUZ's and scientific research institutes have trained for Vietnam over 2,000 candidates and approximately 40 doctors of sciences. The graduates of Soviet educational institutions are now playing an important part in the economy, education and culture of socialist Vietnam. These include ministers and enterprise leaders, prominent scientists, lecturers and edcationists. Of the 700 lecturers of Hanoi University, for example, 268 acquired higher education in the USSR, and of the 200 candidates and doctors of sciences of this head higher educational institution of Vietnam, 114 are graduates of the Soviet higher school. There is also a similar picture in the Hanoi

Polytechnical Institute, where of the 217 candidates and doctors of sciences leading the academic process, 118 defended their theses in our country. Incidentally, the Hanoi Polytechnical and also the Hanoi Agricultural institutes were created with our country's assistance.

[Question] It is well known that Soviet-Vietnamese cooperation is deepening with every passing year. With what new forms has it been enriched in the sphere of the education and training of personnel?

[Answer] Soviet-Vietnamese cooperation has acquired new facets in our field also. Direct ties between the higher educational institutions of the USSR and Vietnam are strengthening and developing. Soviet lecturers are working in Vietnam. The specialists of our two countries are uniting their efforts in the joint development of problems of the communist educationof the student body and an improvement in the teaching of the social sciences. The plan of cultural and scientific cooperation between the USSR and Vietnam for 1981-1985 provides for the close interaction of 24 Soviet educational institutions and the Scientific Research Institute of Problems of the Higher School with 22 Vietnamese educational institutions and the Scientific Research Institute of Higher and Secondary Specialized Education.

We are doing a good deal to create a system for improving the qualifications of specialists of the national economy and lecturers, including the graduates of Soviet educational institutions. We are either accepting them here in our country or our scientists and national economy specialists travel to Vietnam, where they give them special attention. The Agreement on Cooperation in the Training and Improvement of Vietnamese Executive Personnel and Specialists in the Economic Management Sphere in 1981-1985 recently took effect.

[Question] What are the prospects of Soviet-Vietnamese cooperation in the training of national personnel for Vietnam?

[Answer] The Soviet higher school is continuing to train personnel for fraternal Vietnam. As before, we are paying great attention to the quality of the instruction. In the process of the training of Vietnamese specialists the VUZ's take into consideration the specific features of the conditions under which they will have to work.

The professors and lecturers of our VUZ's note the great diligence of the Vietnamese students studying here and their concern to acquire firm and profound knowledge. Over 80 percent of the students, according to the results of the last academic year, have only good and excellent marks, and 32 percent of them are outstanding. One out of every four Vietnamese graduates receives a diploma with distinction. The great deal of work on training and educating Vietnamese students is appreciated highly by their homeland. Government awards of Vietnam have been conferred on 10 of our institutes.

I would like to say in conclusion that we and our Vietnamese colleagues participated together in joint measures in the sphere of the higher education of the socialist community countries and the work of international organizations.

FRENCH AID TO DALAT SEED FARM DETAILED

Paris DOAN KET in Vietnamese 3 Oct 81 p 7

[Article: "Some Economic-Technical Details"]

[Text] The seedstock station is 50 hectares in size and is located in a reclaimed hill area near Da Thien Lake, a scenic area northwest of Dalat. Thirty hectares are set aside for seed production.

The primary function of the seedstock station is to produce Class-1 seeds, especially horse radish and mustard green seeds, in order to supply them to the markets in the province and a number of green belts around the cities and industrial zones, then advance to supplying seeds to the entire nation. At the same time, it also has the function of providing technical guidance in the production of Class-2 seedstock on an area of about 200 hectares (contracted with peasants). Eventually, the station will produce a number of other seeds, depending on the requirements of the market.

According to the terms of a project agreed to by the two parties, the People's Committee of Lam Dong Province will invest 2 million dong in capital construction (developing fields, building a system to bring water to the fields, building work buildings, warehouses, electrical transmission lines, etc.). Those projects are expected to begin operations in 1983, and by the end of that year will be fully operational.

The Vietnamese Scientific-Technical Federation in France will use money contributed in France to provide the seedstock station with electrical equipment, a drainage system, a refrigerated room, machinery and agricultural equipment, etc. It is estimated that those items, which will strengthen the seedstock station with regard to science and technology, added to the operating budget until 1985 (replacement parts, insecticides, periodicals, etc.), will be 844,000 francs in terms of 1981 money.

PARTY ACTIVITIES AND GOVERNMENT

ORGANIZATION AND CADRE WORK IN LANG SON REVIEWED

Hanoi XAY DUNG DANG [Party Building] in Vietnamese No 6, Jun 81 pp 1-5

[Article by Hoang Truong Minh: "Reviewing Some Tasks Regarding the Organization and Cadre Work in Lang Son"]

[Excerpt] Lang Son is a province with many ethnic groups. The Nung and Tay ethnic groups account for more than 80 percent of the population and the Vietnamese for about 15 percent, mostly in the towns and cities. The rest are Dao and Meo, who live in the high-altitute area. That characteristic has gradually been manifested in the party-building work and in the development of the corps of local cadres. The corps of cadres has been built up in the revolutionary movement of the masses of the ethnic groups. That successful lesson has been learned from the period of the August General Uprising to the recent opposition to the Chinese expansionists.

The core cadres there are people who are representative of each ethnic group and are a part of the lives of their people. During each historical phase and turning point of the revolution, the corps of cadres has been steeled and sorted out. Many cadres have maintained noble revolutionary qualities, are capable of fulfilling their missions, and are respected by the ethnic peoples. However, there are also a considerable number of cadres whose will to fight has weakened and who have committed deficiencies and mistakes in implementing the lines and policies of the party. Because of old age and infirmify, or because of limited ability, some cadres are incapable of taking on the new, increasingly difficult missions. At the base level, during the recent period, in addition to the strengthening of the party organizations the corps of core cadres has been improved to an important degree. We believe that the replacement of those core cadres is normal and necessary. Some places have replaced as many as 30 percent, and one place has replaced them all. Of those cadres, some have been rationally reassigned other work and others have been transferred elsewhere. Seeing that, some people have made incorrect evaluations, and some are even suspicious of the quality of ethnic group cadres. In fact, the cadres who have been replaced are ethnic group cadres who have grown up in the locality. In 20 border villages, after the changes were made the core cadres are, generally speaking, stronger than before. Many villages which had been weak and deficient have made rapid progress, in accordance with the developmental laws of the movement.

The development of the corps of cadres is based on solidarity among the ethnic groups, among the cadres of each ethnic group. The assignment and use of cadres is depends on the missions of the sector, locality, or unit and is based on standards. However, there must also be rational structures, especially in areas in which many ethnic groups live side-by-side, and in the party committees and leadership organs. After many years of endeavor, Lang Son has been able to build a corps of leadership and management cadres who are members of local ethnic groups, in ratios that correspond to the number of people in each ethnic group. In the past, there were not many ethnic group cadres in the sectors and echelons. But there has been rapid progress, and more and more ethnic group cadres have replaced Vietnamese cadres, including key leadership cadres. At present, Vietnamese cadres account for only 16 percent of the district committee members and 14.6 percent of the provincial committee members. The rest are ethnic group cadres, especially Tay and Nung. Nearly all of the secretaries of the provincial and district party committees are ethnic group cadres. Of 127 heads and deputies of provincial departments, sectors, and mass associations, 82 percent are members of ethnic groups. That wholesome, correct development has increasingly fulfilled the requirements of the masses and the local political missions. A number of Vietnamese cadres have gradually transferred to the lowlands.

Although the ratio of Dao and Nung cadres is not yet equal to that of the Tay cadres, but it has greatly increased. Some 24 percent of the members of the provincial party committee are Nung cadres, and 58 percent are Tay cadres. In the standing committee of the provincial party committee, there are equal numbers (36 percent) of cadres from the two ethnic groups. In the district party committees, in the past there were few cadres of the Nung ethnic group, but now they account for 26 percent of the members. That is a manifestation of the spirit of endeavor to advance of Nung ethnic group cadres. We have good experiences in the elementary and advanced training of ethnic group cadres. There are also difficulties created by the characteristics of the mountain region, but the efforts to continue to gradually increase the ratio of Nung and Dao cadres in the province's corps of cadres is one of the directions of Lang Son's organization and cadre work, especially in the areas with many Nung and Dao people.

The revolutionary missions in each phase demand the all-round development of both the corps of cadres and the individual cadres. As regards the corps of cadres, we must continually raise its level of revolutionary consciousness and combat ideals, and must also make great efforts to enrich its knowledge and operational ability. Only thereby can the cadres truly have authority when they have positions. Our entire party organization is going all-out to resolve that urgent problem.

Over a period of many years the corps of leadership and management cadres in Lang Son have advanced relatively rapidly culturally, politically, and with regard to technology and economic management. More than 500 college-educated Tay cadres, along with thousands of mid-level cadres of the various types, have created a new quality for the corps of local cadres. If in the past nearly all of the echelons and sectors were political cadres, now many technical and economic cadres have become leadership and management cadres. Nearly 30 percent of the members of the provincial party committee, 26 percent of the members of the standing committees of the districts, and 39 percent of the heads and deputies of services, departments, and sectors at the provinical level are college-educated and include two Ph.D.'s. If mid-level cadres were included, those ratios would be even higher.

The development of such a corps of cadres represents a great effort on the part of a mountain-region province. However, in cognizance as well as in implementation guidance, the various echelons are also still beset with many deficiencies. A considerable number of places are still conservative in their thinking, fear difficulties, do not yet fully and positively apply the measures regarding the elementary and advanced training stipulated by the resolutions of the provincial party committee, and do not yet pay attention to developing the latent capabilities of the ethnic group cadres. Many ethnic-group cadres do not fully realize their responsibility toward their people, and lack a spirit of advancing to fultill the new requirements. According to Resolution No 32 of the Political Bureau, the elementary and advanced training of ethnic-group cadres is a very important local mission. Being self-satisfied or slowing down are major deficiencies. The sectors and echelons are responsible for discovering talented ethnic-group people in the general schools, and for selecting them for training in colleges so that they can return to serve in the locality, while also creating conditions for the cadres filling positions to study and train with regard to the various aspects. They must stress the ethnic-group cadres' knowledge of economic management and create uniformnity of quality among them.

During the past several years the perfection of organization and assignment of cadres in Lang Son has been positively implemented and has attained good results.

When Lang Son was merged with Cao Bang to forms Cao Lang Province, the cadres were assigned. Most of the cadres were assigned in accordance with the organizational system ofthe new province. Some were sent to bolster the districts and cities. A small number were transferred by the Central Committee or were assigned to work in the lowlands. During that period, the party organization stressed education regarding the missions of building socialism and defending the homeland, in the spirit of the Fourth Party Congress, in order to improve the quality of and perfect the corps of cadres. Only thereby could the positive aspects of the province's corps of cadres be developed. The missions of opposing the Chinese troops who encroached upon and invaded our country, resolving the so-called "Chinese residents" crisis, relieving Friendship Pass, building a border fence, organizing production, stabilizing the people's living conditions, etc., were fulfilled relatively well. But there have also arisen a number of negative manifestations which must be overcome.

In accordance with the requirements of the new situation, at the beginning of 1979 the Central Committee decided to separate Cao Lang Province into two provinces. The party committee and people's committee of the province were designated by the Central Committee to temporarily lead and manage the local activities. At that tim time, Lang Son was experiencing a serious shortage of cadres, especially leadership cadres in the provincial sectors and echelons. There were cadres heading only 19 of the 57 sectors, most of which were headed by deputies. Some sectors had neither a head nor a deputy. Commerce, the sector with the most sectors, at that time had only one cadre. During that time fighting the enemy while organizing production, defending the masses, perfecting organization, and assigning cadres was the central mission of the party organization.

With the existing cadres, and cadres sent by the Central Committee, many sectors, especially the economic sectors, were gradually strengthened. A number of cadres were appointed to the key leadership positions and operated in accordance with their functions, thus assuring the system of guidance from the provincial level down to the local level.

After the Chinese aggressor forces were defeated, the problems of the organization and cadre work in Lang Son were posed and resolved, with a system which extended from the provincial level to the district and base levels and was appropriate to the new missions. The requirement that was posed was to enable the organizations to have streamlined apparata and activities that were effective and appropriate to the mountain region. After reviewing a number of sectors, Lang Son was able to eliminate six sectors directly under the province and 10 bureaus and departments, and rationally reassigned a number of cadres and personnel.

Reassigning the leadership cadres along the lines of improving quality was also an urgent requirement with many advantages, especially after the victorious conclusion of the fight against the Chinese aggressors. The new challenges have provided a basis on which to observe and evaluate cadres.

At the provincial and district echelons, the leadership organs have been strengthened by means of party organization congresses and democratic elections. In 1989 and 1980, the provinces and the districts and cities held congresses and elected new party committee members. That was a step forward in the organization and cadre work. Some 58 percent of the members of the provincial party committee and nearly 50 percent of the members of the district and city party committees are newly elected, and many comrades who are now serving as deputies of the departments and sectors are capable of replacing the heads when necessary. Except for two districts, the secretaries of the district and provincial party committees are members of the districts party committee, and two are members of the standing committee of the provincial party committee. At the district level, the secretaries and deputy secretaries of the standing committees of the standing committees and the heads of the organization, control, and propaganda-training departments have been changed.

The sectors and mass organizations at the provincial level have been strengthened along the lines of improving their quality so that they can be appropriate to the new situation in Lang Son. The strengthening of organization is related to the assignment of cadres. We have applied that policy appropriately, with full consideration for cadres, including those who participated in the revolution before and after the August General Uprising in 1945 and those who have committed mistakes. In that spirit, in 1979 and 1980 nearly 100 comrades were allowed to retire. At the same time, we promoted 150 cadres, some of whom are sector heads, and strengthened the internal affairs and economic sectors, the departments, and the mass organizations. At first, we boldly promoted and assigned cadres. In many instances it was not necessary to promote them in order. For example, during their first term as members of the provincial party committee the deputy head of the agricultural service, the deputy head of the bureau of the provincial party committee, etc., were elected to the standing committee. Some district party committee members were elected to serve as deputy secretaries of the district party committees. Many heads or deputies of the bureaus of provincial and district sectors have also been promoted in that positive manner.

In general, the Lang Son party organization has done a relatively good job of implementing Directive No 55 of the Secretariat, and directives No 72 and No 83. The slogan "some are promoted, some are demoted," and the bold and resolute promotion of fully qualified cadres, have begun to be implemented very consciously. That further affirms that the viewpoints and lines regarding the cadre work presented in the recent resolutions of the Party Central Committee are entirely correct.

In Lang Son there are also many sectors which are not sufficiently strong, and the assignment of cadres does not correspond to the missions. In some instances the assignments are not good because the application of standards is not strict and cadre management is not solid. Many party committee echelons pay attention to disciplining leadership cadres who have committed mistakes, but are slow in doing so. They boldly promote good cadres, but not uniformly. Positive thoughts are being developed, but there are still many manifestations of conservatism and sluggishness in the organization and cadre work.

Im plementing Resolution No 32 of the Political Bureau, the Lang Son party organization is resolving many major problems. At present, we are studying and deciding upon an organizational structure that is appropriate to the characteristics of the mountain region. The Economic-Planning-Agricultural Department will be divided into two departments: Economics-Planning and Agriculture. We may dissolve the Collective Peasants' Council and transfer its functions to the Agriculture Department; dissolve the Eastern Medicine Council of the Provincial People's Committee and set up an Eastern Medicine Bureau of the Public Health, Physical Education and Sports Service; transfer the functions of the Customs Branch to the Market Management Department of the Commercial Service; set up a Vocational Education Bureau directly under the Provincial People's Committee, etc. The organizational apparata of the sectors at the district echelon will be set up in the spirit of the resolutions of the Secretariat and the Council of Ministers.

Between now and the end of 1981 we will go all-out to appoint heads for more than 10 sectors which do not yet have them, which only have acting heads, or which have heads who need to be replaced. We will appoint deputies for nearly 10 sectors which do not have any, and for 20 sectors which have only one deputy. The province as a whole needs 45 branch heads and deputies in order to meet the necessary requirements. We will increase the number of leadership and management cadres who are college-educated from the present 40 percent of sector heads and 46 percent of the sector deputies to about 50 to 60 percent. At the same time, we will resolutely reassign cadres who cannot do their jobs. The important sectors to be strengthened so that they will be able to do their work include the communications and transportation, commercial, foreign trade, grain, water conservancy, public health-physical education-sports, and culture-information sectors. Both the province and the districts will implement the slogans "some come and some go" and "some are promoted and some are demoted," on the occassion of holding party congresses at the various echelons. Drafts regarding the functions, responsibilities, and working methods of the provincial party committee, the standing committee, the people's committee, and the provincial-level sectors are being discussed and will be completed in the third quarter of 1981. Plans regarding the leadership and management cadres will be drafted in the sectors, at both the upper and lower echelons.

In order to fulfill those tasks, the province has set up a department to strengthen organization. In addition to the strengthening and good utilization of the staff departments we have paid attention to strengthening the system of organizational organs of the echelons and sectors, overcoming the weaknesses and deficiencies, and assuring sufficient strength to fulfill the increasingly greater requirements.

Attention is being paid to improving the revolutionary quality of, and purifying, the corps of cadres. That is a very complicated problem, so we must carry it out on both a regular basis and a concentrated basis, according to the requirements of strengthening organization.

During the resistance wars against France, the U.S., and the Chinese expansionists, Lang Son's corps of cadres has manifested basic good points, especially loyalty, bravery, belief in the revolution, ability to distinguish between friend and foe, etc. However, there are also a small number of cadres who have degenerated politically, are wavering and suspicious, and even serve as lackeys of the enemy.

The reactionaries within the Chinese ruling circles have taken advantage of the natural conditions and the friendship between the two peoples to carry out their nefarious plot to attack the Vietnamese revolution, and have sought ways to have their lackeys join the ranks of our cadres, while also seducing and persuading some opportunists to follow them. Bad elements in the guise of cadres who serve as lackeys of the enemy, and reactionary political groups set up by the enemy which operate surreptitionsly in the border area, etc., have been discovered and appropriately punished.

The class struggle between us and the enemy is continuing. The enemy is not yet willing to abandon their plot. But the truth of the Vietnamese revolution will triumph. The objectives of the building up of the corps of local cadres will be attained. Recently, good results have been attained in purifying the ranks of the cadres and party members in Lang Son, and much good experience has been gained. Those lessons of being vigilant and resolute while advancing step by step, from top to bottom, on the basis of ethnic group solidarity and solidarity among the cadres.

The quality of cadres is a broad concept. Along with purifying the corps of cadres politically and making it strong ideologically, the Lang Son party organization pays attention to improving the quality and qualifications of cadres and party members. In the course of the struggle against negative manifestations in society, the party organization has opposed the negative manifestations in the party and in the ranks of the cadres. That campaign has been carried out strongly during the past several years. Many cadres with positions of authority who have committed mistakes have been dealt with by the party organizations. Some have been brought to trial. The implementation of directives No 72 and No 83 of the Secretariat of the Party Central Committee has helped the party committee echelons understand the cadre situation and has facilitated their rearrangement of the leadership cadres. Endeavoring to complete the issuing of party membership cards in 1981 and the good implementation of the campaign to oppose negativism are the struggle goals of the Lang Son party organization and also allow us to comprehensively manage the corps of cadres.

In 1980, nearly 20 cadres in positions of authority who committed serious mistakes were disciplined, and some were prosecuted. The disciplining of cadres who committed mistakes was carried out in correct accordance with the party's guidelines. Mistakes regarding responsibilities, the submission of false reports, the violation of socialist property, the illegal use of state materials to build private houses, etc., were severely criticized and strictly punished. In many instances, involving dozens of leadership cadres at the various echelons, party membership cards were withheld. The Lang Son party organization has never been as effective in countering negative manifestations as it was last year. Therefore, we know that opposing negativism is a practical measure in developing the corps of cadres. Thus the local political missions were fulfilled well and the confidence of the masses in the party organization was bolstered. The results that were attained are worthy of enthusiasm, have inspired the leaders, and have encouraged the workers to endea endeavor to advance. However, we must continue to overcome the weaknesses, combine "opposition" with "construction," and guide the concentrated, definitive performance of each task.

Creating a system of responsibility and a system of economic management, and gradually reducing and eventually eliminating the administrative-supply system, while also continuing to uncover, confirm, reach conclusions about, and discipline cadres who commit mistakes are two important aspects of the cadre work. If leadership cadres are appointed in a manner contrary to the above contents, the results will be greatly limited. That has always been a difficult problem. If the collective leadership role is regarded lightly, even if individuals operate positively they cannot do a good job. The party organizations must develop their role of leading the struggle against negativism and criticism, creating party members who are also leadership cadres, etc.

The above are not all of the contents of the organization and cadre work, but they are major matters that have begun to be implemented in Lang Son. On the basis of our actual experiences, and with the desire of doing a better job of developing the corps of cadres, we will endeavor to implement Resolution No 32 of the Political Bureau in a comprehensive, concentrated manner, with leadership and more careful calculations.

QUANG HA DISTRICT STRESSES ORGANIZATION AND CADRE WORK

Hanoi XAY DUNG DANG [Party Building] in Vietnamese No 6, Jun 81 p 6

[Article by Huu Thanh: "The Quang Ha District Party Committee Concerns Itself with the Organization and Cadre Work"]

[Excerpt] Quang Ha is a large district in the border area in the eastern part of Quang Ninh Province. Prior to 1978, it had a population of more than 83,000, 70 percent of whom were Chinese who had lived there for generations. In the entire district there were only four villages with large Vietnamese populations, and one village with a large Dao population. In 18 villages, Chinese were in the majority. In some villages, such as Duong Hoa and Quang Chinh, all the residents were Chinese. After 1972 the Beijing expansionists sought all ways to use the Chinese there to oppose the revolutionary movement in Quang Ha. During 1978 and 1979 they created a crisis during which large numbers of Chinese returned to China. In a 15-month period (April 1978 to July 1979), 95 percent of the Chinese there fled.

That criminal act caused many difficulties for Quang Ha and upset all activities -- political, economic, social life, etc. With regard to the organization and cadre work, the locality also experienced considerable difficulties. Fifteen agricultural cooperatives, three agricultural-forestry cooperatives, and 10 small industry and handicraft cooperatives were completely broken up. More than 80 percent of the agricultural wokers were lost, and thousands of cadres, party members, workers, and professional personnel left their jobs and took their families to China, including more than 300 party members and hundreds of key leadership cadres from the district level to the base level. In some villages, all Chinese party member left. That has caused many organizations, especially at the base level, to no longer be capable of operating. The system of schools and mass organizations at the base level was nearly paralyzed. Twelve of the 18 villages with large Chinese populations became practically "depopulated" zones. Thousands of hectares of fields and orchards no longer had people to produce and harvest. Hundreds of water buffaloes and oxen had no one to care for them. There was no one to keep up the system of granaries, drying patios, irrigation dams, etc., so it gradually deteriorated.

That represented a fierce challenge for the party organization and people of Quang Ha District. In view of that situation, Quang Ha's most urgent task was to rapidly supplement the labor forces, while also being concerned with bolstering and perfecting organization and the corps of cadres from the district level down to the base level. That is the central mission, the key link, and has a very decisive significance. Therefore, without organization and cadres there can be nothing.

With the assistance of the Central Committee and continuous guidance of the Quang Ninh provincial party committee, after 2 years (1979-1980) of urgent, positive efforts the party organization and people of Quang Ha have attained a number of encouraging results. In comparison to 1978 and 1979, the political and social situation there has undergone basic changes. Quang Ha has purified itself politically and is advancing to developing itself into a steel fortress in the border are area. Definite progress has been made with regard to production, cooperativization, living conditions, etc. It may be said that that is a result of the organization and cadre work of the Quang Ha party organization.

PARTY ACTIVITIES AND GOVERNMENT

PROBLEMS OF TRAINING SCIENTIFIC-TECHNICAL CADRES IN SOUTH DISCUSSED

Hanoi XAY DUNG DANG [Party Building] in Vietnamese No 6, Jun 81 pp 13-14

[Article by Tien Dung: "Some Thoughts on Training Scientific-Technical Cadres in the South"]

[Excerpt] As of 1980, our country had 263,000 college-educated cadres and 527,000 cadres with vocational middle school educations. They accounted for 10.21 percent and 20.42 percent, respectively, of the total number of technical workers. That corps of cadres is relatively large and represents all necessary sectors and trades (230 in all). But it is distributed unevenly among the provinces and echelons: 48 percent are managed by the central level; 45 percent work in the provincial-level services and sectors and only 7 percent work at the district level; 26 percent are in Hanoi (including the central organs in Hanoi; and 13 percent are in Ho Chi Minh City. The provinces and districts in distant places such as the Central Highlands, the Mekong Delta, etc., have no or very few college-educated cadres in the forestry, industrial, construction, commercial, communications, posts and telecommunications, and other sectors.

The existing corps of scientific-technical cadres in the south includes a very small number trained by the U.S. and its puppets, but most have been transferred from the north. For example, 100 percent of the management cadres of the colleges and specialized schools are people who were trained in the north or in the socialist countries. Nearly 8,000 leadership and guidance cadres of the general education sector, hundreds of college instructors, and tens of thousands of general school teachers have also been sent from the north. The Mekong Delta, the number-one producer of rice, is in great need of scientific-technical cadres specializing in irrigation. The Saigon puppet regime left behind only 20 engineers and 50 cadres with vocational middle school cadres who specialized in irrigation. During that period, the north trained 3,000 engineers and 5,000 vocational middle school cadres in that sector. The Ministry of Water Conservancy has sent a number of them from the north to supplement the south, but it has not yet been able to fulfill the need. Many economic management cadres, scientific-technical cadres who specialize in agriculture, heavy industry, etc., have also been sent to the south. In general, they have done a good job and many of them have matured, but they don't want to work for a long time in the south. A considerable number of cadres have changed their occupations in order to be able to return to work in the municipalities and cities. For example, teachers and agricultural technical cadres return to work in commerce, and a person who had been a forestry engineer for many years returned to work in the office of the municipal party committee! A considerable number of doctors who have come from the north work in the provincial services and hospitals, and are seldom willing to work in distant districts. Furthermore, the transfer of many cadres -- all at one time -- from the north to the south has created an imbalance and has affected completeness in the deployment and use of cadres.

From a nationwide point of view, there is no shortage of college-level and vocational middle school-level scientific-technical cadres. But there is a great shortage in the southern provinces, especially in the specialized cultivation areas. In the education sector, if the norm regarding teachers set forth in Directive No 243 of the Premier were correctly fulfilled, the number of students entering the higher normal schools would have to double, and those entering normal colleges would have to triple. In order to attain the norm of 10 doctors per 10,000 people by the year 2000 (there are now 3 doctors per 10,000 people, while in the other socialist countries there are 17 to 30 doctors per 10,000 people), the annual rate at which medical cadres are trained would have to double. In order to assure that a cooperative or a production collective has four college-educated cadres, tens of thousands of people must be added in the south. Generally speaking, there is a greater shortage of cadres who are middle school or higher school graduates than of college-educated cadres, and there is a greater shortage of economic management cadres than scientific-technical cadres. According to initial calculations, in the Central Highland provinces nearly 2,000 college-educated economic management cadres must be added in the next few years. With regard to management cadres, an urgent requirement is to immediately train agricultural economic management cadres (including agricultural, forestry, and marine products cadres), commercial cadres, and cadres in a number of industrial sectors.

During recent years, the localities, colleges, higher schools, and vocational middle schools in the south have taken positive steps to promote the academic education of cadres, and have selected cadres to study at stations and in on-the-job classes and schools in the province. College preparatory classes and schools have been opened in Nha Trang and Tien Giang, in order to provide supplementary education for the cadres, troops, and children of war dead and families with merit toward the revolution. Gia Lai-Cong Tum, Binh Tri Thien, and Minh Hai provinces, Ho Chi Minh City, etc., at an early date opened on-the-job schools and classes for the elementary and advanced training of management cadres. However, there have been few results and quality is still low.

Furthermore, there are irrational aspects in our student recruitment. Every year the colleges and vocational middle schools select students by means of nationwide examinations. The results have been that most of the students in the cities score enough points to be admitted, but very few of the students in the mountain region provinces and in rural areas, especially in the Mekong Delta, are admitted. For example, in 1979 Ho Chi Minh City University selected 271 students from the southern provinces, while 490 students were selected in the city. In 1980 there were 236 people in the provinces who had sufficiently high scores, while there were 572 in Ho Chi Minh City. Sixty percent of the students admitted into the 1980-1984 class of the Agricultural College were city people. Of the students with sufficiently high scores to be admitted to the Technical Normal College in 1980, 50 percent were from Ho Chi Minh City and only 8 or 9 percent were from the Mekong Delta provinces. There was only one person from Minh Hai and An Giang provinces, and there was none from Dac Lac. Ben Tre selected 47 people, but only two were admitted. Every year, students from the Central Highlands and Mekong Delta provinces who are qualified for admission to the Ho Chi Minh City Polytechnical College account for no more than 30 of the 300 qualified people.

We do not yet have a policy to encourage, or have a serious attitude toward, graduates who are assigned to difficult places or to places far from the cities. Recently, about 10 percent of the graduates of the Ho Chi Minh City Normal College, and many students ofthe other schools, were unwilling to accept assignments in distant provinces.

An important deficiency is that the provinces do not yet have cadre plans with regard to the scientific-technical sectors, or have not accurately forcasted the need for such cadres. They have not cooperated closely with the colleges and vocational medical schools in organizing the elementary and advanced training of cadres for their localities. Many provinces still regard lightly the training of scientific-technical and management cadres.

GRAIN TRANSPORTATION IN MEKONG DELTA TO BE IMPROVED

Hanoi GIAO THONG VAN TAI in Vietnamese 10 Aug 81 pp 4, 5

[Article by Tran Van: "Joint Efforts to Unravel Difficulties"]

[Text] The Mekong Delta is an area of prime importance to agricultural development in our country. In 1980, a rather abundant 10th-month crop was reaped in the Mekong Delta after 5 years of endeavor to open new lands, to reclaim fallow ones, to carry out water conservancy and to initially build new production relationships. Grain mobilization was accelerated resulting in a large volume of grains collected. In January 1981, the amount of mobilized grains came to 500,000 tons--a fivefold increase over that in the same period in 1980. Paddy was not only crammed into warehouses but also left in the open in heaps which could not be removed in time though convoys of sampans continued to carry paddy everyday to concentration points. The need to take precautions against this situation had been considered but adequate preparations could not be made because of difficulties inherent in the overall economy. Despite a scarcity of material and technical bases, the communications and transportation sector undertook to move a large volume of grains in a short period of time. At the beginning of the year, the Ministry of Communications and Transportation decided to muster railroad cars and vessels including 10,000-tonnage liners to carry grains to North Vietnam. This policy was criticized by some people who termed it "uneconomical." But this course of action was deemed necessary by persons who were then present in the Mekong Delta and who saw with their own eyes the high heaps of paddy left out in the open to endure the effects of night dew and daytime sunshine and also by those who were aware of the situation of the collectivized peasants in the provinces of Thanh Hoa, Nghe Tinh, Ha Nam Ninh and so on: These peasants had endured severe natural calamities in 1980 and were strenuously struggling during the preharvest period and concentrating efforts on cultivating the winter-spring crop. Grain transportation was usually a one-way traffic affair; if cargo was handled slowly, transportation means had to wait a long time at both terminals; moreover, contract provisions for penalties for keeping transportation means waiting were not applied. All that might be considered to be an "uneconomical" action from the point of view of pure business. After realizing the urgency of grain transportation and its influence on the nationwide distribution and circulation of grains, transportation units made great efforts and sacrificed the local interests of their own sector to promote the common benefit.

As a result of the endeavor to simultaneously work and draw experiences and to gradually overcome irrationalities in the transportation organization, since February 1981 a new transportation method has been applied which fixes grain regrouping places in each province or group of provinces, which indicates grain transfer spots for rice mills and for Ho Chi Minh City and the eastern Nam Bo provinces and which thus creates bases for sending grains to the north. Dredgers of Dinh An were gathered to deepen the Hau River bottom to enable ships with a loading capacity of 3,000 to 5,000 tons to come to Tra Noc Port to load the cargo. In the near future, the Hau River current will accommodate 10,000-tonnage ships which will come to take up the cargo and will carry it directly to the northern ports without going through the Saigon Port.

Numerous difficulties have been experienced in cargo handling because the stevedoring forces are still weak, with a low professional standard, a shortage of equipment and the small scale of piers. These shortcomings have been overcome in many localities by deploying "soft" ports, expanding stevedoring points and employing the assault youth forces and army units to handle the cargo. A number of stevedores have been sent from Ho Chi Minh City to localities to provide assistance. These efforts have brought about a new change in grain transportation. Though the result has not met the planned requirements, the volume of grains transported in the first 6 months of this year has increased 20 times compared with the first 6 months of 1980.

However, grain transportation is still faced with many difficulties the solution of which requires the efforts of many sectors and the close guidance of the responsible state organs. The first question is weighing, measuring and counting. Since modern weighing equipment is still unavailable, it is necessary to rapidly fabricate simple weighing means capable of weighing a large quantity with a relative accuracy. At the river-transportation protection conference held in Ho Chi Minh City in May 1981, there were many suggestions to manufacture wooden cans of different sizes to measure paddy. Though not quite accurate, measuring by means of these wooden cans would not involve so great discrepancies as those produced by certain types of weighing scales now in use. These suggestions deserve consideration by the various localities. Scale producing enterprises must be supplied with standard materials which are less prone to distortion when put into use. High precision must be ensured when casting steel weights so that it will not be necessary to adjust them later on by boring a hole and filling it with lead. (In a reportage on weighing and measuring devices, the magazine KHOA HOC KY THUAT [Science and Technology] in Ho Chi Minh City has revealed the inaccuracy of many scales which have been passed by the inspection section of the factory and put in the finished product warehouse for delivery to customers.)

The quality of grains depends not only on preservation in the transportation process but also on their quality at the time of delivery by the people and on the way they are preserved in warehouses and on storage fields. Experiences from the recent agricultural season have demonstrated that, on the spur of a massive purchase campaign, many localities tried to achieve a large volume by accepting even wet and bad paddy with the result that the quality of the paddy gathered on the villages' storage fields was already low. On many of these fields, the layer of paddy which sprouted and fermented was one-span thick, which was a great waste and which made it difficult to preserve paddy during transportation.

This year, the joint corporation for the supply of materials to Zone 2 has supplied 900 tons of warehouse frames and 200 tons of roofing iron to the Mekong Delta provinces to build paddy warehouses. Many villages have built temporary warehouses with bamboo and used coconut tree leaves to make their roofs. Nevertheless, it will still be necessary to store paddy in the open during the next agricultural seasons. Therefore, the need to accept only good-quality paddy when purchasing it from peasants is still a decisive factor. Only by doing so can one hold transportation units responsible for paddy preservation during the transportation process.

Another characteristic of the Mekong Delta is the fact that the common means and forces are plentiful while those belonging to the state are weak. The management of the joint state-private enterprises and cooperatives in charge of transportation is still lax. Since many joint state-private units and cooperatives exist in name only while their activities are actually carried out under the form of private business, the various localities have found it very difficult to concentrate means and must, therefore, take administrative measures which do not prove effective, though. In some instances, half of the forces and means belonging to a joint state-private enterprise left for another locality to carry out activities. Because state-operated units did not have enough means to meet transportation requirements, the grain sector in some areas had to directly sign contracts with owners of private means and was subsequently cheated by bad elements who fled after receiving grains. The Minh Hai Grain Service lost 110 tons after hiring 10 ships on contract. Though owning no means, some people used fake documents in asking the subward authorities to recommend them to the Grain Service for transportation purposes, received 10 tons of rice and sold 8.

To strengthen the grain transportation forces and means, it is necessary to repair the existing means and build new ones and, at the same time, to continuously step up the reform of private transportation forces, to proceed with the registration and management of all kinds of means and to intensively manage joint state-private enterprises and cooperatives engaged in transportation and gear their activities toward the execution of the common plan. When the need for transportation arises, economic organs which want to hire private means must contact the communications and transportation sector to avoid cheating by bad elements.

Negative practices are prevalent and serious in the transportation process and at shipping and receiving points. However, the preventive measures taken have not been uniform and stringent; nor have responsibilities been clearly defined. Bad and deviant elements among crewmen, stevedores, employees in charge of inspection, shipping and reception and warehousemen have connived with hooligans and dishonest traders along riversides in stealing grains from the state. Therefore, internal protection and prevention must be considered to be the principal measure while managerial ones must be taken to prevent outside elements from making underhand contact to take grains away. There must be a system to strictly and uniformly regulate shipping, reception, weighing, measuring and counting. Regulations must be issued to protect and preserve grains during transportation, in warehouses and on storage fields. A system of responsibility--economic and legal under specific circumstances--on the part of transportation units, cargo owning organs, security units and so on must be formulated according to the spirit of Directive No 72-TTg of 18 March 1981 of the premier of the government.

With its vast production potential, the Mekong Delta can have a yearly grain output equivalent to half of that of the entire country. In the past years, our state has invested capital in building numerous material and technical bases to develop agriculture such as by supplying draft buffalos and cattle, providing tractors, building water conservancy works and setting up insecticide producing installations, stations, farms and installations to conduct agricultural science and technique research and so forth. But only small investments have been made to build communications and transportation bases. In his speech at the first session of the Seventh National Assembly, Secretary General Le Duan reminded "all economic sectors--especially the industrial one including heavy industry, communications and transportation and capital construction--of the need to promote agricultural development on a priority basis." The execution of the secretary general's directive requires that all sectors exercise socialist cooperation and that the State Planning Commission, in particular, understands the demands of each sector and locality, arranges uniform, proportional and comprehensive investments by various sectors and creates conditions for the communications and transportation sector to grow and catch up with the strong development of this number one important agricultural region of our country. That is the only way to provide a satisfactory long-term solution to the problem of transporting grains in the Mekong Delta.

HANOI'S CHRONOLOGY OF EVENTS FROM 16 MAY-15 JUNE 1981

Hanoi VIETNAM COURIER in English Jul 81 pp 32, 31

[Text]

May

17 The Vietnamese Foreign Ministry sends a note to its Chinese counterpart denouncing Chinese armed provocations and intrusion into Vietnam in late April and early May, perpetrating many crimes against the Vietnamese people in the border provinces.

18. Signing at the Vietnam Institute of Sciences of a draft project on the use of artificial satellites aided by the UN Development Programme.

— Ms Psichari, a French citizen and professor of music at the Scola Cantorum, left the whole of her property worth about 500,000 francs to Vietnam. This donation, she stated in her will, is to help develop Vietnam's education and culture, which were seriously impaired by long and unjust wars.

19. An exhibition opens with some 200 paintings and sculptures by over 90 women artists, organized by the Vietnam Association of Fine Arts

— In a letter to the UN Secretary-General, the Foreign Ministers of Laos, Vietnam and Kampuchea stress that holding an international conference on Kampuchea as provided for in UN Resolution 35/6 could only yield negative results for peace and stability in the region. The three ministers welcome the UN Secretary-General's efforts in promoting dialogue between the Indochinese countries and the ASEAN countries.

— Inauguration in Tra Noc (Hau Giang province) of a tractor-repair factory built with aid from the Republic of Austria.

20. The Vietnam News Agency rejects allegations by the Chinese News Agency *Xinhua* and the Thai paper "Bangkok Post" claiming that "Vietnamese soldiers landed by fishing boats in Thailand's Trat province".

– Prime Minister Pham Van Dong sends a message to the International Conference on Sanctions against South Africa, held in Paris, expressing that the Vietnamese people and Government "warmly welcome the convening of the conference" and "totally support the resolute and effective measures to be taken by it"

– The Political Bureau of the Central Committee of the Communist Party of Vietnam issues a resolution on science and technology.

21. The Friendship Order of Vietnam is conferred upon the Mongolian Women's Federation.

– The "Voice of the Kampuchean People" Radio of the People's Republic of Kampuchea is admitted as a full member of the International Radio and Television Organization (OIRT) meeting in Balaton (Hungary).

22. The Vietnamese pavilion at the Plovdiv International Fair in Bulgaria wins three gold medals and four diplomas.

– Donation of 800 tonnes of rice by the International Committee of the Red Cross to the Vietnam Red Cross to help Vietnam tide over the shortages caused by the typhoons of 1980.

– The Lao Foreign Ministry hands a memorandum to the Chinese chargé d'affaires in Laos protesting against Chinese incursions into Oudomsay province (4 km inside Lao territory).

24. To Lan Phuong, a woman singer of the "Bong Sen" (Lotus) Art Ensemble of Ho Chi Minh City, wins a special prize at the 16th International Light Music Competition "Bratislavska Lyra 81" held in Czechoslovakia.

25. A delegation of the Communist Party of Vietnam, led by General Secretary Le Duan, leaves Hanoi for the 4th Congress of the People's Revolutionary Party of Kampuchea.

– An agreement on the provision of material aid by the German Democratic Republic to Vietnam in 1981 is signed in the GDR.

26. Opening of the Fourth Congress of the People's Revolutionary Party of Kampuchea.

– Signing in New Delhi of an agreement on an Indian Government loan of 100 million *rupees* to Vietnam for goods import.

28. A delegation of the Vietnam Women's Union, headed by its President Nguyen Thi Dinh, pays a friendship visit to Laos from 23 to 28 May. On this occasion, the Friendship Order and the "For the Cause of Women's Liberation" medal of Vietnam are conferred upon the Lao Patriotic Women's Union.

29. A plan of scientific co-operation between the Vietnam Instittute of Sciences and the GDR Academy of Sciences for the 1981-1985 period is signed in Berlin.

– Le Duan, General Secretary of the Communist Party of Vietnam, sends a message of greetings to Y. Tsedenbal on the occasion of his re-election as General Secretary of the Central Committee of the Mongolian People's Revolutionary Party.

– A protocol on co-operation for 1981 and a five-year (1981–85) co-operation agreement between the Vietnam News Agency and the Lao News Agency is signed.

June

1. Inauguration of the "Doan Ket" basic general education school built with AAPSO assistance in the town of Ha Dong (Southwest of Hanoi).

– Prague: Signing of an agreement to open an air line service between Prague and Hanoi.

2. The Government Council issues instructions on price control.

3. Closing of the 5th session of the Vietnam-Laos Commission for Economic, Cultural, Scientific and Technological Co-operation. Representatives of the two governments and of the two sub-commissions sign a protocol and an agreement for the next five years (1981–1985).

– At the invitation of the Vietnam Federation of Trade Unions, a delegation of the Amalgamated Metal Workers and Shipwrights Union of Australia paid a visit to Vietnam from 20 May to 3 June 1981.

– The Socialist Republic of Vietnam decides to accede to the "Convention on the Prevention and Punishment of the Crime of Genocide" and the "Convention on the Prevention and Punishment of the Crime of Apartheid".

– The Central Committee of the Vietnam Women's Union holds a ceremony to receive the first consignment of gifts donated by GDR pioneers to Vietnamese pioneers: 17,000 out of a total of 70,000 uniforms collected between November 1980 and March 1981.

– A joint press communiqué is published on the meeting between Vo Dong Giang, Vice-Minister of Foreign Affairs of Vietnam, and his Thai counterpart Arun Panupong, in Rangoon on 3 and 4 June: "Both sides had a frank discussion and expressed their respective views of problems of mutual concern. They considered the meeting as useful to narrow down their differences and agreed to continue the dialogue at a mutually convenient date to be agreed upon by both sides."

– Hanoi: Signing of a trade and payment protocol between Vietnam and Romania.

5. Founding of the Vietnam Association of Apiculturists.

7. The Finnish Government decides to grant emergency aid worth 500,000 Finnish marks to Vietnam through the World Food Programme.

8. SRV Acting President Nguyen Huu Tho signs a decree conferring Labour Orders on 202 units and 11 individuals for their achievements in fulfilling the State plan and other tasks in 1980.

– A delegation of the People's National Bank of Kampuchea, headed by Chan Phin, member of the Secretariat of the CC of the People's Revolutionary Party of Kampuchea, Minister, and Director-General of the bank, pays a friendship visit to Vietnam.

9. At the invitation of the Cuban Government, an economic delegation of the Vietnamese Government, led by Nghiem Xuan Yem, Minister and Vice-President of the Vietnam sub-commission for Economic, Scientific and Technological Co-operation, leaves Hanoi to pay a visit to Cuba and attend the 5th session of the Vietnam – Cuba Commission for Economic, Scientific and Technological Co-operation.

10. Signing of an agreement on cultural and scientific Co-operation between Vietnam and Poland for 1981-1985.

12. Signing of a plan of co-operation between the Vietnam State Bank and the People's National Bank of Kampuchea for 1981–1982.

13. The Vietnamese Ministry of Foreign Affairs sends a note to China demanding "an immediate end to Chinese armed provocations and all other activities causing tension in the border areas between the two countries, and the resumption of the Vietnam-China talks in the shortest possible time.

14. The Fourth Conference of the Foreign Ministers of the three Indochinese Countries, held in Phnom Penh on 13 and 14 June, issues a communiqué and a statement proposing new initiatives for peace and stability in Southeast Asia.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

INTERNATIONAL RELATIONS, TRADE AND AID

ADVANTAGES OF MULTILATERAL SETTLEMENTS SYSTEM DETAILED

Hanoi NGOAI THUONG [Foreign Trade] in Vietnamese No 7, Jul 80 pp 20-23 & 29

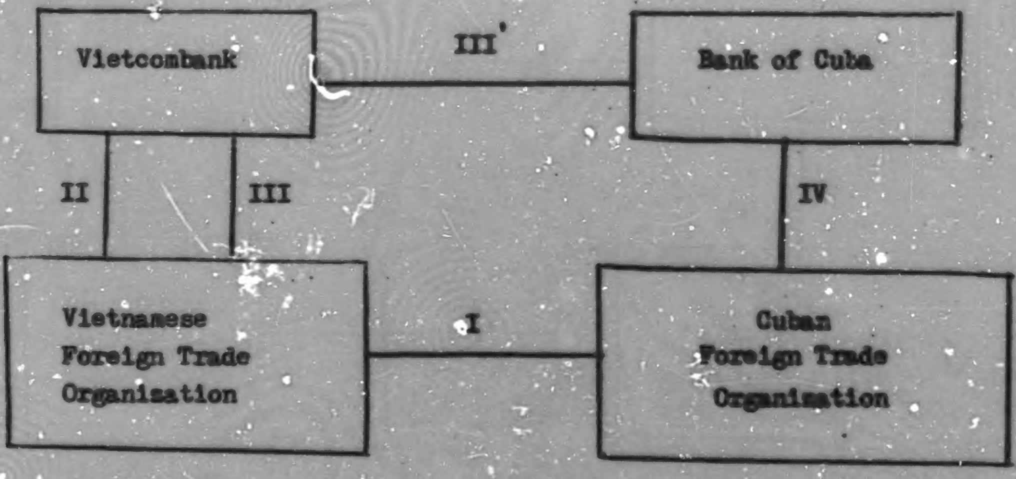
[Article by Nguyen Anh Thu: "On Implementing a Multilateral Settlements System"]

[Text] Our country is a member of the Council for Mutual Economic Assistance and is a member of the International Economic Cooperation Bank (MBES).

As a member of the International Economic Cooperation Bank, our participation in multilateral settlements in rubles transferred from that Bank is a matter of course. Therefore, it is essential that we understand the system of multilateral settlements.

If we are to do so, first of all we must understand and compare the bilateral and multilateral settlements systems in order to realize the new problems that are posed an comparism to the use of the mode of bilateral settlements by means of clearing banks.

We may understand those two settlement modes by means of example presented in the following charts:



Vietcombank
III
Bank of Cuba
II
III
IV
Vietnamese Foreign Trade Organization
I
Cuban Foreign Trade Organization

1. The Vietnamese foreign trade organisation delivers goods to the Cuban foreign trade organization via foreign transportation facilities.

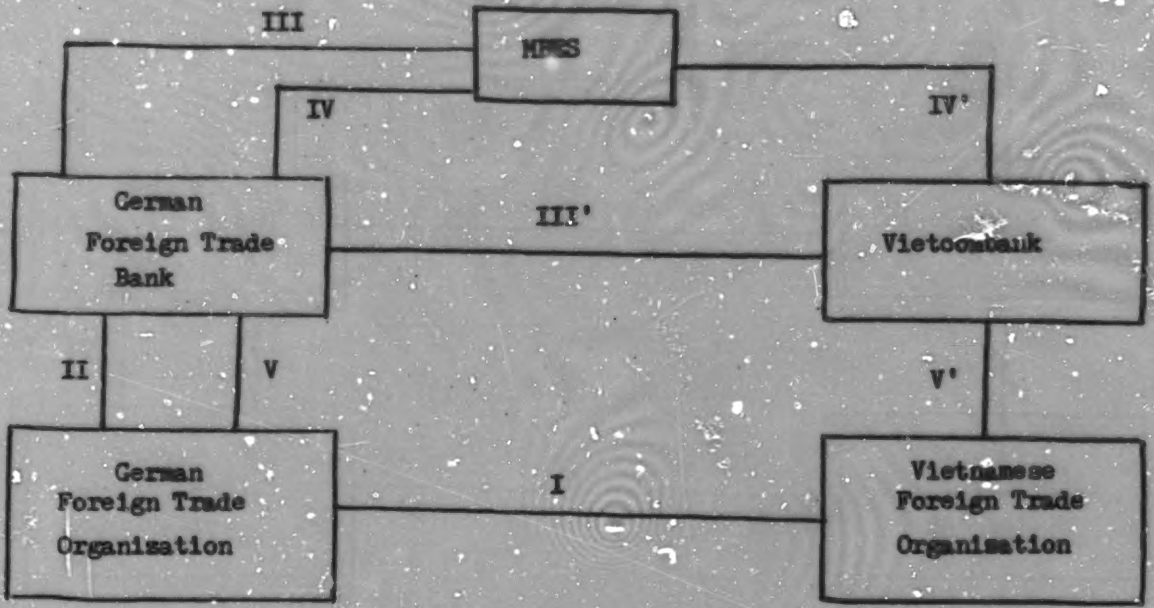
II. On the basis of the goods dilivery documents the Vietnamese commercial organization draws up a set of foreign exchange settlement documents, takes it to the Vietnam Foreign Trade Bank, and requests settlement.

III. The Vietnam Foreign Trade Bank, on behalf of the Foreign Trade Bank of Cuba, receives authorization from the purchaser and, if the documents are deemed in order, immediately settles with the Vietnam Foreign Trade Bank.

III'. At the same time, the Vietnam Foreign Trade Bank sends the documents, along with a form requesting payment, to the Foreign Trade Bank of Cuba.

IV. After receiving the goods delivery documents and settlement documents from the selling party, sent by the bank of the selling party, the Foreign Trade Bank informs the pruchasing party of its obligation.

According to the multilateral settlement mode, the role of the settlement center of the International Economic Cooperation Bank (MBES) may be represented by the example presented in the following chart:



III
MBES
IV
IV'
German Foreign Trade Bank
III'
Vietcombank
II
V
V'
German Foreign Trade Organization
I
Vietnamese Foreign Trade Organisation

I. The foreign trade organization of the GDR delivers goods to the Vietnamese foreign trade organization via foreign transportation facilities.

II. On the basis of the goods delivery documents, the GDR foreign trade organization draws up a set of settlement documents in accordance with the 1968-1979 SEV Common Goods Delivery Conditions and sends it to the purchasing party via the Foreign Trade Bank of the GDR and via MBES.

III. The bank of the selling party sends the documents and demand for payment of the selling party to the International Economic Cooperation Bank and requests that the revolving payments ent by the Vietnam Foreign Trade Bank be deposited in its revolving account at the MBES.

IV-IV'. On the basis of the demand for payment sent by the bank of the selling party, the International Economic Cooperation Bank carries out the settlement:

-- It records the revolving payment in rubles transferred by the Vietnam Foreign Trade Bank.

-- It credits the revolving payment of the GDR Foreign Trade Bank.

V-V'. The foreign trade banks of the two countries record the deficit or credit of the purchasing party or the selling party, while also readjusting the surplus revolving funds in rubles transferred from the MBES account and on their books.

The other basic feature of the two above-mentioned settlement methods to which we must pay attention is that the system of bilateral settlement by means of clearing accounts is not dependent on the surplus of an account -- on whether there is any money in the account or not -- so one country can still pay another country provided that the contents of the settlement are in accord with the stipulations of the agreement on the exchange of goods and the payment of money concluded by the two countries. In other words, the system of bilateral settlement does not require income (from exports) before there is expenditure (for imports).

As for the system of multilateral settlements, it requires that there be a close correspondence between income and expenditure and that they closely govern each other. Generally speaking, only if there is income can there be expenditure.

Thus participation in the multilateral settlement system will bring about the following benefits:

a. It is possible to borrow settlement funds at a more favorable rate than with other countries. The general interest rates of settlement loans now in force are as follows:

-- For sums in excess of the debt 50 percent or less of the norm, the annual interest rate is 2 percent.

-- For sums in excess of the debt 50 percent or more of the norm, the annual interest rate is 3 percent.

As regards Vietnam, Cuba, and Mongolia the following preferential interest rates are applied:

-- For loans of 1 month the annual interest rate in .5percent.

-- For loans of between 1 month and 3 months, the annual interest rate is .75 percent.

-- For loans of more than 3 months, the annual interest rate is 1 percent, in order to liquidate the excess imports up to 2 percent of the total two-way export-import indicies with each country during the year prior to the planning year.

Such loans do not require preplanning and have the nature of "revolving credit," i.e. the International Economic Cooperation Bank automatically grants a loan when there is no more money in the revolving account and automatically collects the debt when deposits are made into the account.

Those loans will help us pay for imports while our export level is still low and are not spread evenly throughout the year but are usually concentrated during the last 6 months of the year.

If we know how to take advantage of that type of loan we can change the present method of producing goods on a contracted-out basis along the lines of assigning raw materials and collecting finished products, only paying for labor (in such cases, of course, the country which contracts out the goods has calculated the interest charges of the bank loans and has invested capital to buy the raw materials assigned to our country) to the mode of outright purches. We can thus increase the amount paid (in foreign exchange) for our labor.

b. We can obtain long-term loans from the International Investment Bank (MIB -- corresponding to our Construction Bank). A noteworthy feature of such loans is the we are not limited to transfer rubles, but can borrow currencies of the capitialist countries in order to import equipment and materials from such countries.

In addition to the main advantages discussed above, there are features that differ from the present bilateral settlement system:

With the bilateral settlement system, even though we do not export enough to balance our imports, the fraternal countries can still deliver goods to us for they will be repaid by the foreign trade banks in such countries. Such settlements do not depend on the surpluses in excess of clearing accounts, provided that the contents of the settlement are in accord with the common stipulations of the agreements regarding the exchange of goods and the settling of accounts concluded between the two countries. Only at the end of the year do the governments of the two countries cope with the problems of balancing and paying excess import loans.

With the multilateral settlement system, there definitely must be income if there is to be expenditures. In other words,it is not necessary that the commercial settlement relationships be balanced bilaterally, but that there be an over-all balance in our commercial relations with all countries participating in multilateral via the International Economic Cooperation Bank.

Specifically, if our export level is low and we exceed the excess import level eligible for reimbursement by settlement loans, and if there are no other source of loans to promptly make up for the deficit (it is not necessary to wait until the end of the year, as when applying the system of bilateral settlement by means of clearing accounts) the International Economic Cooperation Bank may stop making settlements for all import shipments after that, not only those to one general corporation but also those to all import general corporations. The reason is that the countries sending goods cannot collect payment for them.

The credit system of the International Economic Cooperation Bank also strictly stipulates that new loans may not be made to pay old debts. Specifically:

If, during the planning year, debts of previous years are due and new debts are incurred before the old debts are paid, the repayment period of the new debts cannot exceed the time period of the planning year.

At the beginning of a planning year, if there are old debts but none must be repaid during the planning year, new debts that are within the amount authorized in the planning year will have a repayment schedule exceeding the period of the planning year.

The above basic principles regarding credit show that it is not true that the reason why we must change over to the multilateral settlement system is that the value measurement function of the commercial ruble is ineffective because prices in bilateral settlements are based production costs, which have not changed for a long time, or that we are still hesitant to change over to the multilateral settlement system because we want to hold on to the production cost system, which is more advantageous to us than "sliding scale prices."

Clearly, the multilateral settlements system is prompting us and requiring us to strictly fulfill our obligations in our foreign trade relationships with other countries.

In it true that the crux of this matter is that in our economic relationships with foreign countries, when the management structure of a foreign country changes our country's management structure must also undergo a corresponding basic transformation?

Therefore, we believe that our eventual participation will depend on whether or not use prepare all conditions for such participation. In order to accomplish that, we believe that we must:

-- Improve import planning, and encourage and require thae ministries, sectors, and localities to bear responsibility for balancing their need for imports and the capability of the sector or locality to deliver goods for export and participate in the state's over-all balancing.

The concept of "balancing" here does not mean achieving a balance between imports and exports and applying it mechanically to each base-level unit, but means comparing exports and imports to determine whether each ministry, sector, or locality to determine what their export excess is and to what degree the state will allow them to use that export excess. If there is an import excess, how much of an import excess will the state allow? Only thereby can we create conditions to improve the import situation and overcome the present situation of management of the "grant" variety.

If the ministries, sectors, and localities use imports in the orbit of over-all balancing, responsibility for resolving such excess imports will fall on two organizations: the foreign trade and banking organizations. But to a certain extent they will also be impotent, for those two sectors are only responsible for circulation, credit, and foreign settlements, and are not sectors which produce export goods and facilities for settling and repaying foreign debts.

Having the ministries, sectors, and localities participate in over-all balancing will also serve to reduce the present burden of excess imports.

The recent experiences show that if we continue to maintain an import structure of the "grant" variety, no amount of imports can meet the many kinds of import needs.

But if the state changes over to the mode of limiting the issuing of non-repaid funds from the budget and expanding investment via credit from the State Bank, and especially if the state requires all ministries, sectors, and localities to balance their exports and imports, only then will the ministries, sectors, localities, and economic organizations pay attention to calculating the economic effectiveness of imports, and only then will there be conditions for coping with the problem of excess imports and advancing to balancing exports and imports.

Along with improving import planning, we cannot but improve the relevant systems and policies.

Settlement is the final step in export-import activities and also manifests in a combined way the economic activities that precede it. Therefore, we cannot maintain the situation of signing contracts in a formalistic manner, essentially to "attract" imports. Nor can we conclude contracts of the "free at the beginning of the year but busy at the end of the year" variety, in order to be recognized as having fulfilled the plan!

In their grant and credit activities, the financial and banking sectors must exercise a supervisory role from the beginning of the economic activity (at times during the policy formulation phase) to serve as a precondition for settlement. They should not wait until equipment and materials arrive in our country before "making themselves known", which not only leaves them with no supervisory role to play but adds to the present situation of getting involved in debts.

The present internal account balancing price ratios of the various foreign currencies must be readjusted in order to correct the incorrect viewpoints that imports are better and cheaper than goods produced in our country and that imports from capitalist countries are cheaper and better than imports from the socialist countries.

The foreign trade surpluses should become a budgetary income item, as if it were a tax, and funds used to make up for foreign trade deficits should become "price support" funds. Those two funds must be implemented directly with the economic organizations using imports, and not via the foreign trade organizations, as they are now. Only thereby can we allow domestic production to fully calculate the value of imports as well as fully understand the state's policy of protecting and developing domestic production.

By means of such improvements we must determine the nature of the authority of the foreign trade organizations in importing and exporting in order to, on that basis, make the necessary improvements in the management systems and policies, in order to encourage the export-import general corporations and corporations to reduce the management systems, procedures, and regulations which are very necessary for the domestic economic organizations but are not necessary for the foreign trade organizations.

That transformation ofthe management structure cannot be accomplished in a day. Therefore, we cannot wait before completing the improvements before participating in the multilateral settlements system. If we do not implement it immediately we may never be able to eliminate the situation of "everyone knowing but no one doing anything."

Therefore, there is also the opinion that we must soon participate in the implementation of the multilateral settlements system and use it as a whip with which to lash at the present sluggishness of import management, for only when all of our imports slow down because we do not have sufficient exports and can no longer borrow funds with which to make settlements can we hope to affect, concretely, practically, and rapidly the present management structure of the "grant" variety.

We believe that that opinion is too pessimistic and negative, but is also worthy of our thought and action.

In fact, although prices are related to the multilateral settlements system but are not completely dependent on it. For example, at present the Soviet Union still settles sugar purchases from Cuba at prices much higher than the "sliding scale prices", which saves Cuba millions of rubles, but the two countries do not, for that reason, fail to implement the multilateral settlements system.

Nor should participation in the multilateral settlements system be understood as being a purely professional mater, merely a bookkeeping technique.

BRIEFS

INDIAN TABLE TENNIS TEAM--Hanoi, VNA 28 Oct--The Indian table tennis team, led by Gopinath Ghosh, left here today, concluding its visit and competition tour of Vietnam. It was seen off by Nguyen Dac Tho, director of the Hanoi physical culture and sports service and vice president of the Vietnam Table Tennis Association, and a representative of the Indian Embassy. While here, the team called at the late President Ho Chi Minh's home and office, visited scenic spots in Hanoi, Ho Chi Minh City and Haiphong. Prime Minister Pham Van Dong cordially received the team. The General Department of Physical Culture and Sports, accredited by the chairman of the Council of Ministers, held a ceremony to present the friendship medal to the head and other members of the team. They also received gifts from the chairman of the Council of Ministers. [Text] [OW281535 Hanoi VNA in English 1501 GMT 28 Oct 81]

GDR SCHOOLS, WORKSHOPS CONSTRUCTION--Hanoi VNA 24 Oct--The German Democratic Republic from 1976 to 1980 built for Vietnam 60 repair shops, 39 workshops, and 5 vocational schools, according to a report to a recent joint meeting in Berlin between the GDR-Vietnam committee and the GDR Ministry of Regionally Administered Industry and Food Industry [District Managed Industry and Foodstuffs Industry]. Speaking at the meeting, Prof Dr Klaus Bochmann, vice minister of regionally administered industry and food industry said that the GDR would continue to help Vietnam build more small workshops for the 1981-85 period. These will include electronic appliances and sewing-machines repair shops, and carpentry workshops. [Text] [OW302349 Hanoi VNA in English 0707 GMT 24 Oct 81]

UZBEK SSR DELEGATION--Hanoi VNA 28 Oct--The delegation of the Uzbek Soviet Socialist Republic accompanied by an Uzbek art troupe left here today after a friendship visit and participation in "Uzbek days" in Vietnam. While here, the Uzbek guests visited Hanoi, Ho Chi Minh City and the provinces of Phu Khanh and Thanh Hoa, and attended meetings, talks, exhibitions, film shows and art performances in observance of "Uzbek days." On this occasion, the Hanoi College of Water Conservation and representatives of the Tashkent College of Water Conservation and Agricultural Mechanization, members of the delegations, attended a ceremony to establish sisterhood relations between the two colleges and to work out measures to enhance their cooperation. [Text] [OW302349 Hanoi VNA in English 1503 GMT 28 Oct 81]

BULGARIAN MARXIST-LENINIST CONFERENCE--Hanoi VNA 30 Oct--A delegation of the Vietnamese Institute of Marxism-Leninism led by Tran Tong, deputy head of the commission for research on party history under the Central Committee of the Communist Party of Vietnam, has attended a regular conference of directors of the institutes of Marxism-Leninism and of party history of the socialist countries held recently in Varna, Bulgaria. [Text] [OW302349 Hanoi VNA in English 0712 GMT 30 Oct 81]

SOVIET SHIP REPAIR CONTRACT--Hanoi VNA 30 Oct--Since the beginning of this year, the Chandlery and Repair Yard for foreign ships docking at Saigon harbour has repaired more than 50 foreign ships. The corporation employs 23 engineers and workers. It has ancillary workshops specializing in chipping and painting or making spare parts. A frontrank unit for six consecutive years, the corporation has always fulfilled its contracts on time and at a cost usually lower than in a number of Asian countries. To meet the increasing demand for repair of foreign ships, the ship Chandlery and Repair Corporation has signed a contract with the Vladivostok Shipping Line of the Soviet Union for supply of materials and equipment necessary for the repair service. [Text] [OW302349 Hanoi VNA in English 0305 GMT 30 Oct 81]

PANAMANIAN INDEPENDENCE DAY GREETINGS--Hanoi VNA 2 Nov--President of the Council of State Truong Chinh and chairman of the Council of Ministers Pham Van Dong have sent a joint message of greetings to President Aristides Royo Sanchez on the 78th independence day of the Republic of Panama (November 3). The message reaffirms the Vietnamese people's solidarity with and full support for the Panamanian people's just struggle to regain full sovereignty over the Canal Zone and to build a prosperous country. Foreign Minister Nguyen Co Thach has also sent greetings to his Panamanian counterpart, Jorge Illueca. [Text] [OW021809 Hanoi VNA in English 1519 GMT 2 Nov 81]

PARTY ACTIVITIES AND GOVERNMENT

EXCERPT FROM 23RD PLENUM RESOLUTION PUBLISHED

Hanoi MOT SO VAN KIEN CUA DANG VE CONG TAC GIAO DUC LY LUAN VA CHINH TRI in Vietnamese Sach Giao Khoa Mac-Lenin 1978 pp-77-79

[Excerpt from the Resolution on of the 23rd Plenum of the Party Central Committee from the book "Some Party Documents Regarding Theoretical and Political Education," Marxism-Leninism Publishing House, Hanoi, 1978, Tien Bo Printing Plant, 7,000 copies, 400 pages]

[Text] The principal responsibility of the ideological work is to enable cadres and party members to fully understand the lines and policies of the party, fully grasp the party's resolutions and viewpoints, have correct awareness of the situation and missions, correctly evaluate the accomplishments, deficiencies, advantages, and difficulties, overcome viewpoints which are contrary to the viewpoints of the party and manifestations of wavering and irresponsibility, and smash the ideological penetration schemes and psychological arguments of the enemy and the allegations of the bad elements.

In order to get the work of teaching lines and policies on the right track, we must improve the quality of the political activity of the party organisations, organise regular reporting of current events, and organise regular short-term basic training regarding lines and policies of the leadership cadres at the various levels. We must create a system of lecturers on the lines and policies of the party.

We must strengthen the party's leadership of the literature, art, education, and publishing sectors, assure that those organs are always sharp tools ofthe party on the ideological front, and resolutely struggle against mistaken ideological tendencies.

The direction of the ideological work in the party is to cultivate the revolutionary thought of the working class, increase consciousness of socialist ideals and determination to fight for the complete victory of Marxism-Leninism and the lines and policies ofthe party, oppose petty bourgeois thought and the influence of bourgeois thought, eliminate the vestiges of feudal thought, and stop and erase the influence of the various kinds of opportunism.

In the present situation, we must endeavor to bolster the revolutionary quality and virtue of cadres and party members along the following lines:

Strengthening revolutionary will, spirit of self-reliance, sense of responsibility, and consciousness of organization and discipline, and opposing passivity, dependence on others, fear of difficulty and responsibility, and failure to strictly implement the resolutions of the party and the laws of the state.

Strengthening the spirit of socialist collective mastership and of respecting and protecting public property; preventing and eliminating the "special privilege" state of mind; and opposing all acts which violate state and collective property.

Increasing consciousness of respecting and developing the collective mastership right ofthe masses, of always remaining close to the masses, and of oposing bureaucratism, dogmatism, and despotism.

Strengthening loyalty and consciousness of defending the truth and supporting positive attitudes and acts; opposing dishonesty, making false reports, failure to protect what is correct and to struggle against what is incorrect, grovelling and obsequiousness; and opposing the attitute of seeking revenge against people who struggle straightfowardly.

Increasing consciousness of protecting solidarity and unity within the party, love for one's comrades,and the spirit of self-criticism and criticism; and opposing fractionalism, local partialism, the coveting of power, favoratism or unprincipled struggling.

Strengthening the spirit of loving study and endeavoring to learn new things, and oppoing laziness toward study and thinking.

Strengthening the teaching of Marxist-Leninist theory, and raising the cultural, specialized, and technical levels, and improving the organization and management ability, of cadres and party members.

Between now and 1980:

Most high-level and mid-level leadership and management cadres must complete the high-level theory curriculum. Most elementary-level leadership and management cadres must complete the mid-level theory curriculum. All basic-level cadres must complete the elementary-level curriculum, and some must complete the mid-level curriculum.

By the end of 1977, all ordinary party members must complete the basic-level curriculum. From now on, every party member must complete the basic-level curriculum within 2 years after entering the party.

In addition to teaching Marxist-Leninist theory, we must teach economic management and specialized, technical subjects at levels corresponding to the missions assigned. We must determine which curricula are appropriate for cadres and party members who are advanced in age.

We must launch a study movement throughout the party. Studying in order to improve their knowledge and ability in order to fulfill their duties as citizens is a responsibility of party members and an indispensable need in the spiritual lives of communists. The basic level party organizations must review their study programs for party members and require people who have not yet studied to study immediately. We must praise party members who positively study and improve their knowledge, and severely criticize party members who are lazy toward study.

Leading the ideological work is a responsibility of the party committee echelons. After each period of time they must recapitulate the ideological work and do a good job of resolving the contents and methods in order to continually increase the combattiveness and scientific nature of the ideological work. They must cultivate, train, and build up the corps of cadres engaged in ideological work.

COUNCIL OF MINISTERS DECISION ON VILLAGE ADMINISTRATION

BK021451 Hanoi NHAN DAN in Vietnamese 19 Oct 81 pp 1, 4

[SRV Council of Ministers' "recent" decision on the functions, duties and organization of the village administrative apparatus]

[Text] The village is the state's basic administrative unit in the rural areas. The state administration at the village level, which comprises a people's council and a people's committee elected by the people according to the constitution and the law, is the state management organ in the village.

The village-level administration has the function of managing all aspects of the state's activities in the village. This function is aimed at ensuring that the constitution and laws are respected and scrupulously implemented in the localities; ensuring and promoting the working people's collective mastery; ensuring the citizens' interests and caring for the material and cultural life of the people in the village; and motivating all citizens in the village to discharge their obligations toward the state.

The state administration at the village level has the following principal duties and powers:

1. Concerning the formulation and implementation of plan:

In those villages which have basically achieved cooperativization, the village people's committee shall directly formulate and carry out those tasks which are under the charge of the village, such as education, culture, public health service, social welfare and budget planning. It shall also standardize the principal norms included in the plans of cooperatives for production development, tax payments, sales of products to the state, construction of projects in support of production, securing bank loans, and so forth. It shall incorporate these norms into the village's master plan and submit it to the village people's council for decisions and to the district people's committee for approval. It shall supervise and assist the cooperatives in fulfilling their plans.

In those villages which are carrying out cooperativization, the village people's committee shall guide the hamlet production committees, production collectives and cooperatives in formulating production and business plans. It shall combine these plans and submit them to the village people's council for decisions and to the district people's committee for approval and organization of methods of implementation.

2. Manage land, forests, seashores and other natural resources in the village according to the law.

3. Manage the population and birth, marriage, death and household registrations in accordance with the policies and procedures in force; manage labor, organize the implementation of labor distribution plans and procedures and plans for the mobilization of corvee labor for the state and the village.

4. Manage and execute financial policies and collect taxes and debts for the state. Formulate and manage the expenditures and receipts of the village budget according to the general regulations.

5. Control and supervise cooperatives and production collectives in their performance of the following tasks:

—Fulfilling production plans; implementing state policies and laws; and fully discharging various obligations toward the state, especially the grain and foodstuff obligation as well as the obligation to pay taxes and debts.

—Correctly implementing the cooperative and production collective statutes, especially the principles governing the production and distribution work of collectives and the use of their capital and other assets, as well as the principles governing the use and maintenance of the material and technical base of cooperatives and production collectives.

6. Implementing the policy on socialist transformation; managing the market and preventing all illegal business and trade activities as well as speculation and hoarding.

7. Maintaining political security and public order and safety; suppressing social vices; opposing all negative phenomena; protecting the socialist property as well as the lives and property of the people. With regard to the organs, enterprises, stations, farms, stores, warehouses, communications lines, oil pipelines, power lines and other property belonging to higher-level organs but established in or running through a village, the village people's committees concerned are dutybound to protect and assist these units and to create conditions for them to fulfill their duties.

8. Implementing military obligation systems and plans in strict accordance with state laws and plans; building local armed forces; organizing combat operations and standing ready to fight; and carrying out army support activities.

9. Managing small-scale irrigation projects and communications lines in the village.

10. Organizing cultural, information, wired radio, educational, public health, physical education and sports activities and managing the installations of these services.

11. Improving the material and cultural life of the people in the village.

12. Exposing and dealing with all violations of the law according to the powers vested in the village administration.

The village administration is empowered to supervise the economic and cultural establishments and organs at a higher level operating in the village, so as to ensure that they adhere to the various state laws and policies and execute the resolutions and decisions of the local authorities.

The village people's committee is empowered to suspend the implementation of those policies and activities of collective economic organizations and other bodies directly subordinate to the village which it considers to be at variance with the law, harmful to the state and collectives and detrimental to the legitimate interests of cooperative members and citizens. The committee, however, must immediately notify the district or city people's committee of its action.

The village people's council is the organ of state authority in the village. It works according to the conference system, meeting in regular quarterly sessions and, if necessary, in extraordinary sessions.

The village people's council shall discuss and decide on measures aimed at ensuring that the constitution and the law are scrupulously respected and implemented in the locality. It shall also discuss and decide on important tasks related to the village plans and budget and to the local people's obligations, interests, living conditions, feelings, customs and habits. All resolutions of the village people's council must be approved by a majority vote.

The village people's council shall supervise the village people's committee and various specialized committees of the village in carrying out the tasks entrusted to them. The people's committee and specialized committees of the village must seriously answer all questions asked by members of the village people's council.

Members of the village people's council must exemplarily implement all positions and policies of the party, all laws of the state, all directives and resolutions of higher-level administrative organs and all resolutions of the village people's council. They must also motivate the people in their localities to do likewise.

The village people's committee is the executive organ of the village people's council and the state administrative organ in the village. It is accountable to the village people's council and higher-level state administrative organs for all tasks entrusted to it.

The village people's committee works according to the principle of collective leadership and individual responsibility. Each member of the village people's committee must bear collective responsibility for the committee's work and individual responsibility for the work assigned to him by the committee.

The chairman of the village people's committee bears the principal responsibility for all activities of the committee and ensures the implementation of the above-cited principle of division of work.

The composition of the village people's committee and its division of duties are determined as follows:

The village people's committee comprises from five to seven members.

In those mountain aras with a mixed population of many different nationalities, the village people's committee may have from five to nine members.

The standing component of the village people's committee is composed of its chairman, its vice chairmen, and a member secretary.

Depending on specific conditions and the standards of cadres, the village people's committee may divide its duties as follows:

The chairman shall take charge of general administrative duties as well as economic and planning work, and shall directly serve as head of the village's financial and budget section.

One vice chairman shall take charge of internal affairs and serve as head of the village's public security section.

The other vice chairman shall take charge of agriculture and cooperativization or cultural, activities and social welfare.

A member serving as secretary shall take charge of the committee's office and assist the chairman and vice chairmen in carrying out their daily duties.

A member in charge of military affairs shall directly serve as commander of the village military unit.

A member shall be put in charge of communications, water conservancy and land and labor management.

Other members shall directly serve as heads of specialized sections or as chiefs of hamlets and montagnard villages.

The specialized sections of the village people's committee are:

1. The economic affairs and planning section, which is in charge of planning, statistics, labor, land, communications, water conservancy, circulation, distribution, and agricultural, fishery and forestry production. It also has the duty of implementing policies on agricultural transformation and building cooperations.

2. The financial section, whcih is in charge of financial and budgetary affairs, tax collection, accounting and the management of various funds.

3. The cultural and social welfare section, which is in charge of cultural and information service, wired radio transmission, physical education and sports, war invalids and social welfare.

4. The village public security section, which is in charge of public order and security; birth, marriage and death registration; and household registration.

5. The village military section, which is in charge of military work.

6. The medical aid station, which is in charge of public health protection.

7. The post and telegraph station, which is in charge of communications and the postal service.

Work relationship between the village people's committee and the district and city people's committees, the village party committee, and the mass organizations as well as collective economic organizations in the village is defined as follows:

--The village people's committee is placed under the direct leadership and guidance of the district or city people's committee concerning the state activities in the village. The village people's committee must regularly report on its work to the district or city people's committee, ask for instructions from it, and submit itself to its control and supervision.

--The village people's committee is placed under the direct leadership of the village party committee. It is responsible for organizing the implementation of the village party committee's directives and resolutions. It must regularly report on its work to the village party committee, ask for its instructions and submit itself to its control and supervision in all activities.

--The village people's committee must regularly meet with the VFF and the various mass organizations so as to be fully aware of the people's aspirations before deciding on policies related to their obligations and interests. The village people's committee must rely on the VFF and the mass organizations in motivating and organizing the people to implement the party's line and positions as well as the state's laws and policies and to participate in state management in their localities.

--The village people's committee must create proper conditions for and assist cooperatives and production collectives in developing production. At the same time, it must exert its functions as a state management organ vis-a-vis cooperatives and production collectives, in accordance with port 5, article 3 [as published] of this decision.

--The people's committees of provinces and of municipalities and special zones directly subordinate to the central government are responsible for formulating plans for forming village administrative cadres and developing their knowledge and professional skills. First of all, they must immediately adopt plans for improving the administrative cadres currently working in the villages so as to make them capable of implementing the party's line and positions and the state's laws and policies. The administration at the provincial and district levels must devise plans for improving the village administrative apparatus so as to ensure its stability, purity and integrity, promote its internal solidarity, and guarantee the democratic character of its relations with the people. They must absolutely prevent hostile, corrupt and irresponsible elements as well as persons bent on bullying the people and unwilling to implement official policies...from worming their way into the village administration.

BRIEFS

DEMISE OF VCP OFFICIAL--The paper NHAN DAN today reports that Comrade Nguyen Van Kinh had passed away in Moscow on 26 October at the age of 60. Comrade Nguyen Van Kinh was formerly a member of the VCP Central Committee and SRV ambassador to the Soviet Union. He also served as vice chairman of the Vietnam-Soviet Friendship Association, and vice chairman of the Vietnam Peace Committee. [BK010951 Hanoi Domestic Service in Vietnamese 2300 GMT 29 Oct 81]

VIETNAM-SOVIET EMULATION ACTIVITIES--To score new achievements in honor of the Fifth VCP Congress and the 64th anniversary of the October Socialist Revolution, Vietnamese workers and Soviet specialists at the Cao Son Coal Mine have pledged to emulate in overcoming all existing weaknesses along with accelerating work at various projects. Meanwhile, Vietnamese teachers and Soviet specialists at the Vietnam-Soviet technical school for mining workers have also launched an emulation drive to continue to improve the school's teaching quality. ECONOMIC PLANNING, TRADE AND FINANCE

BRIEFS

NGHIA BINH RESETTLERS--Since early this year Mo Duc District of Nghia Binh Province has sent 364 families of 1,360 persons to new economic zones in Gia Lai-Cong Tum and Dac Lac provinces. The province has provided these families with loans, foodstuff and materials to help them promptly resettle in their new places. [BK260533 Hanoi Domestic Service in Vietnamese 1100 GMT 22 Oct 81]

DAC LAC RESETTLEMENT--Over the past 5 years Dac Lac Province has received more than 25,000 families of 141,000 persons from northern Binh Tri Thien and Quang Nam-danang provinces for resettlement in various new economic zones. Despite numerous difficulties, the province has built almost 300,000 square meters of living quarters, many schools, sanitation posts and markets for the resettlers. Since 1978, the new resettlers have delivered to state granaries more than 48,000 tons of foodstuff, including thousands of tons of green beans and por. [BK260533 Hanoi Domestic Service in Vietnamese 2300 GMT 20 Oct 81]

TAX COLLECTION RESULTS--Over the past 9 months, the tax affairs sector has achieved more than 75 percent of its 1981 target for the collection of industrial and trade taxes. All provinces and cities throughout the country are reported to have collected more taxes than they did last year. In particular, the Central Marine Customs Department and various provinces such as Tien Giang, An Giang, Tay Ninh, Cuu Long, Gia Lai-cong Tum, Dac Lac, Dong Thap, Lang Son and Song Be have achieved their annual targets. [Hanoi Domestic Service in Vietnamese 2300 GMT 14 Oct 81 BK]

GUIDANCE FOR DISTRICT PLANNING--According to VNA, in the past various provinces and cities have provided guidance on the formulation of plans for their subordinate districts and precincts--totaling more than 400. Almost all of the provinces and cities have set up a steering committee for the formulation of their 1982 plans and have organized study courses for key cadres of various districts and sectors with the purpose of teaching them on how to formulate a plan. The State Planning Commission has sent 13 groups of cadres to help a number of provinces to formulate plans and provide guidance for planning activities at 13 pilot districts in Hanoi, Ho Chi Minh City and 11 provinces in the country. [Hanoi Domestic Service in Vietnamese 0400 GMT 18 Oct 81 BK]

NEW ECONOMIC ZONES--Over the past 5 yeas, Ha Son Binh Province has sent 37,000 people to build new economic zones in Bac Thai, Son La, Lam Dong and Song Be provinces. These new economic zone resettlers have so far succeeded in reclaiming more than 10,000 hectares of wasteland. [Hanoi Domestic Service in Vietnamese 2300 GMT 13 Oct 81 BK]

RESETTLERS FROM BINH TRI THIEN--Over the past 9 months of 1981, Trieu Hai District of Binh Tri Thien Province has resettled 1,036 families comprising 5,015 people and 1,764 laborers in various new economic zones in the southern provinces. The district will send another 1,500 people to new economic zones in other provinces from now till the end of this year. [BK010951 Hanoi Domestic Service in Vietnamese 2300 GMT 26 Oct 81]

CONFERENCE ON SALT PRODUCTION--Recently in Dong Nai Province, the Ministry of Food Industry met with representatives from various southern coastal provinces to discuss ways to step up the production of salt, gypsum and other chemicals processed from sea water. Thanks to the material and financial assistance given by other provinces, the salt sector has over the recent past been able to produce almost 300,000 tons of salt despite adverse weather conditions and ample rainfall. In the days ahead, such southern coastal provinces as Phu Khanh, Thuan Hai and Dong Nai will strive to concentrate on processing salt, gypsum and other chemicals on a larger scale. LATE OCTOBER AGRICULTURAL DEVELOPMENTS REPORTED

BK311540 Hanoi Domestic Service in Vietnamese 0400 GMT 31 Oct 81

[Agricultural review for the past 10 days]

[Summary] "According to the General Statistics Department, there was plenty of sunshine last week, which created favorable conditions for the harvesting of 10th-month rice. As of 25 October, provinces and cities in the north had harvested 10th-month rice on more than 260,000 hectares or nearly 20 percent of the sown area. The daily harvesting pace over the past 10 days was 4,000 hectares faster than last last week."

According to initial reports from various localities, "this year the early 10th-month rice crop yielded a lower output than was originally estimated." The main 10th-month rice crop in many areas has become ripe and is likely to yield a higher output than the early 10th-month rice. "However, many areas of 10th-month rice are still infested with insects. Ha Nam Ninh and Nghe Tinh provinces and Haiphong still have tens of thousands of hectares which are being ravaged by insects."

In the past few days, "there were heavy to very heavy rains in various provinces from Thanh Hoa to Nghe Tinh and Phu Khanh, waterlogging or flooding many areas of already-blossomed rice. Nghe Tinh Province alone had more than 30,000 hectares of rice and subsidiary food crops affected by waterlogging and floods."

"Provinces and cities in the south have completed planting 10th-month rice on 2,005,000 hectares. This is nearly 100,000 hectares below the planed target and about 50,000-60,000 hectares less than the figure attained in the 1980 10th-month crop."

The 10th-month rice in the southern provinces is reportedly developing favorably. "But insects harmful to rice have appeared in many areas. Various coastal provinces in central Vietnam have reported the spreading of pachidiplosis oryzae. Quang Nam-danang and Nghia Binh are seeking ways to eradicate and prevent insects from spreading."

As for the planting of winter vegetables and subsidiary food crops, "as of 25 October provinces and cities in the north had planted 111,000 hectares, almost as much as in the same period last year. This figure represents only about 30 percent of the planned target. The sowing schedule for such early winter crops as sweet potatoes, corn, soybeans and other legumes was over on 30 October and the planting results of all the crops were far below the planned target."

Along with cultivating 10th-month and winter crops, various provinces are making the necessary preparations for the cultivation of the 5th-month spring crop. Provinces in the north are sowing 5th-month rice seeds and germinating duckweeds. The amount of duckweeds they have germinated so far is very small as it represents only one-third of the duckweed germinated in the same period last year.

In order to score more achievements to greet the fifth party congress, in the coming period localities must concentrate on implementing the following points:

--Provinces in the north must quickly and neatly harvest all the 10th-month rice which has become ripe; strive to plant winter crops on the entire planned area; and make the necessary preparations for the cultivation of winter-spring crops.

--Provinces in the south must care for and satisfactorily protect all the already planted 10th-month rice areas; formulate plans to protect 10th-month rice from waterlogging and floods; and continue to plant winter-spring rice, vegetables and subsidiary food crops.

--Localities throughout the country must overcome difficulties arising from the shortage of animal feed in developing animal husbandry and must strive to stamp out insect infestation.

CSO: 4209/58

AGRICULTURE

BRIEFS

RAINS SLOW RICE HARVEST--Over the past week rainfalls have still been reported in various provinces and cities in the Bac Bo lowlands and midlands and in the former 4th and 5th regions, thus slowing the pace of the 10th-month rice harvest and winter-spring crop production. According to the General Statistics Department, as of 20 October the north had harvested 10th-month rice on 190,000 hectares or about 15 percent of the sown area. This is 80,000 hectares faster than the same period last year. Also as of this date, provinces and cities in the north had planted 98,000 hectares of winter crops. These provinces are concentrating on harvesting 10th-month rice quickly and neatly, planting winter crops and caring for and replanting those vegetable and subsidiary food crop areas which were damaged by recent heavy rains. [Text] [BK310858 Hanoi Domestic Service in Vietnamese 2300 GMT 26 Oct 81]

LONG AN WINTER CROP--Long An Province is striving to plant more than 40,000 ha of winter-spring rice during October and December. As of 15 October, the province had planted more than 10,000 ha. The province is also building small water conservancy projects and producing more fertilizer to help accelerate intensive cultivation for more rice output. [BK260533 Hanoi Domestic Service in Vietnamese 0400 GMT 21 Oct 81]

HAU GIANG 10TH-MONTH RICE--As of 12 October, Hau Giang Province had planted 327,000 ha of 10th-month rice, achieving more than 96 percent of the plan norm. Although harmful insects appeared in some areas of Chau Thanh and O Mon districts, the local peasants and authorities eradicated them promptly and effectively minimized damage to ricefields. In the same period, the province planted 5,700 ha of subsidiary crops, mostly sweet potato and corn.[BK260533 Hanoi Domestic Service in Vietnamese 1100 GMT 21 Oct 81]

GUANGNAM-DANANG WINTER-SPRING RICE--In the 1981-82 winter-spring sowing season, Quang Nam-danang province plans to plant between 50,000 and 52,000 hectares of rice with the "HT-19", "IR-36" and "6-E" short-term high-yield rice varieties. The province has thus far prepared enough seeds for planting. [BK210215 Hanoi Domestic Service in Vietnamese 1100 GMT 15 Oct 81]

LONG AN SUMMER-FALL RICE HARVEST--As of 8 October, Long An Province had harvested summar-fall rice on more than 15,000 hectares or more than 50 percent of the sown acreage with the rice output averaging 2.2 metric ton per hectare. Local peasants are striving to plant rice in areas where summer-fall rice has just been harvested. More than 5,000 hectares of winter-spring rice have been planted in the province so far. [BK210215 Hanoi Domestic Service in Vietnamese 1100 GMT 17 Oct 81]

TIEN GIANG SUMMER-FALL RICE--Despite unfavorable weather, insect infestation and prolonged drought, the summer-fall rice crop in Tien Giang Province was still able to produce an average output of 3.5 metric tons of paddy per hectare. As of 7 October, the province had harvested rice on 91 percent of the sown acreage and had collected 24,969 metric tons of paddy--or 108 percent of the planned target--including 3,252 tons as agricultural tax. The province is striving to collect an additional 10,000 metric tons of paddy from the rice crop. [BK210215 Hanoi Domestic Service in Vietnamese 0400 GMT 19 Oct 81]

BEN TRE 10TH-MONTH RICE--As of the end of September, Ben Tre Province had successfully concluded planting 10th-month rice on 70,000 hectares, achieving more than 127 percent of the planned target and representing an increase of 10,000 hectares over last year's 10th-month rice crop. The province is preparing land for sowing winter-spring rice in conjunction with efforts to harvest summer-fall rice. Some 25,000 hectares of summer-fall rice have been harvested so far. [BK210215 Hanoi Domestic Service in Vietnamese 1100 GMT 17 Oct 81]

COFFEE PRODUCTION CONFERENCE--The Ministry of Agriculture recently held a conference with various localities and several related sectors to review the implementation of resolution No 375-CP of the Council of Ministers on the need to develop coffee production. It was reported at the conference that coffee production in Vietnam, especially in the central highlands, had failed to attain the desired results and that due to lack of care, many coffee plants had died before they could bear fruits. The conference also discussed ways to develop coffee production for the period 1981-85. [BK210215 Hanoi Service in Vietnamese 0400 GMT 14 Oct 81]

PHAM VAN DONG ADDRESSES TEACHERS CONFERENCE

BK301030 Hanoi NHAN DAN in Vietnamese 9 Oct 81 pp 1, 4

[VNA report on Council of Ministers Chairman Pham Van Dong's speech at a conference held by the Ministry of Education to celebrate the 35th anniversary of the teaching branch]

[Text] Amid the jubilant atmosphere at the start of the new school year, the Ministry of Education held a conference in Hanoi on 8 October to celebrate the 35th anniversary of the founding of the teaching branch (8 October 1946).

Attending the conference were representatives of various teachers colleges--from kindergarten to university level--from all areas throughout the country; representatives of progressive and senior teachers and of academics in educational science; and representatives of various branches, services, public organs and mass organizations at the central level and in Hanoi.

Those attending the conference were very glad to welcome Comrade Pham Van Dong, chairman of the Council of Ministers, member of the party Central Committee and chairman of the Central Commission for Education Reform, who came to address the conference.

Following the opening speech by Minister of Education Nguyen Thi Binh, Prof Nguyen Canh Toan, a PhD degree holder and vice minister of education--who represented the Ministry of Education--delivered a speech in which he pointed out the extraordinary growth of the country's teaching branch over the past 35 years.

Proceeding from what was described as near nothingness and after going through various stages of growth, operation and war, the national teaching branch has succeeded in building a system of teachers colleges comprising more than 150 schools with more than 90,000 students, including 8 teachers' colleges and 2 teaching institutions.

Over the past 35 years these teachers colleges have turned out more than half a million teachers of various grades for the education sector. Each year they have provided training and refresher courses for tens of thousands of teachers. Post graduate and higher learning education organized by certain teachers colleges has begun to bear fruit.

One of the striking achievements scored by the teaching branch over the past 35 years is that it has succeeded in quickly meeting the growing demand for teachers and ensuring the constant growth of the general education, kindergarten and supplementary education sectors. In addition, it has also created new quality standards and has used these as a basis for the implementation of the party Central Committee Political Bureau's resolution on educational reform.

However, efforts to provide training and refresher courses for the contingent of teachers have yet to meet the growing demand for development of the general education sector, especially in the mountainous regions, the hilly areas and the Mekong River delta. The qualifications and the organizational structure of the contingent of teachers have yet to meet the demands for general education, kindergarten teaching and supplementary education in the new situation. The qualitative results of the training provided for the contingent of teachers are also still poor.

In the period ahead, while striving to become fully informed of the party Central Committee Political Bureau's resolution on educational reform, the education sector must concentrate its leadership efforts on developing various teachers' colleges in order to build a large contingent of good-quality general education, kindergarten and supplementary education teachers who will be spread rationally throughout the country. This contingent of teachers must be structually homogeneous in keeping with the requirements for comprehensive education and educational development as outlined in the state place.

Addressing the conference, Council of Ministers chairman Pham Van Dong heartily commended the entire teaching branch for its great achievements over the past 35 years, saying that its achievements are inseparable from those scored by the general education sector and are regarded as a significant contribution to the common victories of the party and the nation in various stages of the revolution.

After pointing to deficiencies in the teaching branch, the chairman of the Council of Ministers said: The general education sector occupies a very important position and role in the cause of building socialism and defending the socialist fatherland. In the light of the party Central Committee Political Bureau's resolution on educational reform, the education sector must develop comprehensively and quickly. This task requires that great attention be paid to leadership activities and to tackling the many urgent problems--a key one being improvement of the quality of general education work. In order to solve this problem, each teacher, male or female, must always ask himself or herself: What subject are we teaching? For what purposes are we teaching?

Our schools are dutybound to provide students with a general ethnical, mental, physical and calisthenic education, but above all, they must arm their students with a correct way of thinking so that students can develop their intelligence, can think independently and can find ways to tackle problems. In addition, schools must also instill in students a penchant for learning during and after schooling so that they will for the rest of their lives, take pains to learn, think, and apply the scientific and technical progress of mankind to our country's actual conditions. As the Vietnamese people are intelligent and creative by nature, the educational sector is dutybound to arm them with general knowledge and thinking skills so that they can develop their intelligence and creativity more extensively and can serve the cause of building and defending the socialist fatherland more effectively.

The chairman of the Council of Ministers emphasized: The ultimate goal of schools and teachers is to train our sons and brothers into socialist workers, that is those with a high spirit of mastership, a high sense of working responsibility, good education, good scientific and technical knowledge, thinking and learning skills, and the ability to perform satisfactorily all the tasks assigned them by the state. The task of building and defending the socialist fatherland needs the contribution of a great number of knowledgeable and competent people who are determined to do revolutionary work. The general education sector must surge forward to meet these requirements in a most active manner. It must struggle to turn each school into a training center for socialist laborers and each teacher into a worker or an engineer capable of training the new generation.

Touching on the position and role of the contingent of teachers, the chairman of the Council of Ministers said: When he was alive, Uncle Ho paid great attention to educational work and the contingent of teachers. The Uncle once told us: "Nothing is more glorious than to train the younger generations so that they can make active contributions to building socialism and communism. A good teacher--one that deserves to be called a teacher--is the most glorious person. Although their names have not been carried in the press and none among them has been decorated, good teachers are regarded as unknown heroes. This is a very glorious fact. If there were no teachers to educate the people's children, how could we build socialism? Therefore, teaching is a very important and glorious career. Whoever holds an incorrect view towards teaching must correct it." This earnest advice of venerated and beloved Uncle Ho serves as a reminder for our party and people to adopt a correct view and attitude towards teachers, and to help create as many favorable conditions as possible for the contingent of teachers to satisfactorily fulfill their glorious mandate. For its part, the contingent of teachers must constantly undergo political indoctrination and improve their educational and scientific knowledge so as to set good examples for students to follow. To achieve this aim, teachers must have good ethical qualities, sympathy and a love for the young generation, great aspirations and an ardent love for the country, the people and socialism. In addition, teachers must have extensive knowledge and the ability to teach. Only with these qualities can they ensure that knowledge is passed on to the young generation.

The chairman of the Council of Ministers concluded by urging the education sector to review the good experience scored by the teaching branch over the past 35 years. He also urged various sectors and localities to pay more attention to supporting the cause of developing education, especially the cause of developing the teaching branch, thus contributing to bringing about a drastic change in the quality of general education in accordance with the spirit of the party Central Committee Political Bureau's resolution on educational reform.

On behalf ot he education sector, Minister of Education Nguyen Thi Binh pledged that the sector would properly and scrupulously implement what Council of Ministers chairman Pham Van Dong had instructed, and that it would resolve to develop its strong points, overcome shortcomings and strive to surmount all difficulties in providing better training and refresher courses for an ever-larger contingent of teachers so as to meet the requirements for educational development in our country and to be worthy of the trust of the party, the state, and the people and soldiers of the country.

On this occasion, the Ministry of Education held a grand ceremony to award a labor service order first class to Hanoi Teachers College No 1 and a labor service order second class to the Vinh City Teachers College. The Ministry of Education also awarded certificates of commendation to 27 teaching schools--from kindergarten to high school, college and university levels--which have been credited with good emulation achievements in the sector.

On this occasion the Ministry of Education launched throughout the entire education sector an emulation drive to greet the Fifth VCP Congress. Under this emulation drive, the sector must continue to carry out steadily and creatively the motivation drive to increase the teaching of revolutionary ethics in schools; to improve academic and scholastic activities in the direction of teaching reform; to actively build a good teaching environment; and to organize a good material and spiritual life for cadres and students.

BIOGRAPHIC

INFORMATION ON VIETNAMESE PERSONALITIES

[The following information on Vietnamese personalities has been extracted from Vietnamese-language sources published in Hanoi, unless otherwise indicated. Asterisked job title indicates that this is the first known press reference to this individual functioning in this capacity.]

Nguyễn Tăng Ấm [NGUYEENX TAWNG AAMS]

Vice Minister of Public Health; his article "Public Health Supports Agricultural Development in the Making River Delta" appeared in the cited source. (NHAN DAN 21 Sep 81 p 3)

Lý Ban [LYS BAN], Deceased

Born in 1912 at Long Hoa Village, Can Duoc District, Long An Province; former Alternate Member of the VCP Central Committee; former Vice Minister of Foreign Trade; He was in retirement at the time of his death, due to a heart attack, on 30 Sep 81. (NHAN DAN 1 Oct 81 p 4)

Đặng Quốc Bảo [DAWNGJ QUOOCS BAOR]

Member of the Central Committee of the VCP; 1st Secretary of the Ho Chi Minh Communist Youth Union; on 20 Sep 81 he attended a reception for a delegation of the West Berlin Karl Liebknecht Socialist Youth Union. (NHAN DAN 21 Sep 81 p 1)

Nguyễn Kỳ Cẩm [NGUYEENX KYF CAAMR]

*Deputy Secretary of the VCP Committee, Nghe Tinh Province; on 2 Oct 81 he attended ceremonies in Vinh marking the 32d anniversary of the GDR. (NHAN DAN 7 Oct 81 p 1)

Nguyễn Đình Chân [NGUYEENX DINHF CHAAN], *Colonel

Represented the Foreign Relations Department, Ministry of National Defense on 26 Sep 81 at a reception for a delegation of Indian military personalities. (NHAN DAN 27 Sep 81 p 1)

Hồ Anh Dũng [HOOF ANH ZUNGX]

Member of the Secretariat of the Ho Chi Minh Communist Youth Union; on 20 Sep 81 he attended a reception for a delegation of the West Berlin Karl Liebknecht Socialist Youth Union. (NHAN DAN 21 Sep 81 p 1)

Hồ Anh Dũng [HOOF ANH ZUNGX]

*Acting Secretary General of the Hồ Chi Minh Communist Youth Union; on 1 Oct 81 he attended a reception for a visiting delegation of the Iraq Youth Federation. (NHAN DAN 3 Oct 81 p 4)

Chế Đặng [CHEES DAWNGJ]

*Vice Chairman of the People's Committee of Lam Dong Province; was one of the local officials that met with a delegation of the Marseille Chapter of the Association of Vietnamese in France that visited Lam Dong Province to visit projects which it is supporting [date of visit not specified]. (Paris DOAN KET 3 Oct 81 pp 1, 7)

Nguyễn Tăng Điện [NGUYEENX TAWNG DIEENJ]

Head of the Fire Fighting and Prevention Department, Ministry of Interior; his article "Properly Organize and Manage Fire Fighting and Prevention" appeared in the cited source. (NHAN DAN 1 Oct 81 p 3)

Đinh Công Hoà [DINH COONG HOAF]

*Secretary of the VCP Committee of Bach Thong District, Bac Thai Province; he is the author of an article in the cited source entitled, "Bach Thong District Develops Forestry." (LAM NGHIEP No 11, Nov 80 pp 6-7 and 30)

Lê Hoà [LEE HOAF] aka Nguyễn Đức Tĩnh [GNUYEENX DUWCS TINHX], deceased

Born in 1919; member of the VCP Party Affairs Committee of the Ministry of Supply; Vice Minister of Supply; former Secretary of the VCP Committee, Hoa Binh Province; he died of an illness on 2 Oct 81. (NHAN DAN 3 Oct 81 p 4)

Trần Văn Hồng [TRAANF VAWN HOONGF]

*Deputy chief of the Finance Department [Vu Tai Chinh] of the Office of the VCP Central Committee; appears as the signer of a 25 Jun 1977 Memorandum of the VCP CC Office to subordinate VCP committee echelons on training norms in party schools which is contained in the cited volume, a collection of VCP documents on political and theoretical indoctrination work. (Hanoi MOT SO VAN KIEN CUA DANG VE CONG TAC GIAO DUC LY LUAN VA CHINH TRI, Sach Giao Khoa Mac-Lenin, 1978, p 299)

Đào Trọng Hùng [DAOF TRONGJ HUNGF]

*Head of the Marine Products College; his article on his college appeared in the cited source. (NHAN DAN 2 Oct 81 p 3)

Lương Tuấn Kha [LUWOWNG TUAANS KHA], *Major General

*Deputy Commander, 3d Military region; recently he accompanied VCP General Secretary Le Duan on a visit to Haiphong. (NHAN DAN 7 Oct 81 p 1)

Doàn Bá Khánh [DOANF BAS KHANHS], Major General

*Commander of the Navy; recently he accompanied VCP General Secretary Le Duan on a visit to Haiphong. (NHAN DAN 7 Oct 81 p 1)

Bùi Thanh Khiết [BUIF THANH KHIEETS]

Alternate Member of the VCP Central Committee; Head of the Science and Education Department of the VCP Central Committee; recently he attended the 2d Vietnam Pharmaceutical Science and Technology Conference in Ho Chi Minh City. (QUAN DOI NHAN DAN 23 Sep 81 p 1)

Trần Khoát [TRAANF KHOATS]

*Secretary of the VCP Committee, Cat Ba District, Haiphong; recently he accompanied VCP General Secretary Le Duan on a visit of his district. (NHAN DAN 7 Oct 81 p 1)

Nguyễn Văn Kỉnh [NGUYEENX VAWN KINHR]

President of the Vietnam Esparanto Association for the Defense of Peace; Vice President of the Vietnam-Soviet Friendship Association; on 20 Sep 81 he attended ceremonies marking the 25th anniversary of the Vietnam Esparanto Association. (NHAN DAN 22 Sep 81 p 4)

Vũ Ngọc Lân [VUX NGOCJ LAAN]

*Secretary of the VCP Committee, Kien An District, Haiphong; recently he accompanied VCP General Secretary Le Duan on a visit of his district. (NHAN DAN 7 Oct 81 p 4)

Bùi Thanh Liêm [BUIF THANH LIEEM], Major, Deceased

Born 30 Jun 49; Member of the VCP; Major in the Air Force; Reserve [Candidate?] Cosmonaut; he died on 22 Sep 81 while on a training mission. (QUAN DOI NHAN DAN 26 Sep 81 p 4)

Trần Anh Liên [TRAANF ANH LIEEN]

Member of the Secretariat of the Vietnam Confederation of Trade Unions; recently he attended the arrival in the SRV of a delegation of the Central Council of Hungarian Trade Unions. (NHAN DAN 3 Oct 81 p 1)

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

MILITARY AFFAIRS AND PUBLIC SECURITY

PACIFICATION ACTIVITIES OF LAC DISTRICT 2ND COMPANY REPORTED

Hanoi QUAN DOI NHAN DAN in Vietnamese 24 Sep 81 p 3

[Reporter's article from Ba Xuan: "Amid the Tribal Village's Love"]

[Text] Nearly 2 years ago, cadres and troopers of the 2nd Company of the Lac District received the mission from higher echelon of establishing bases in the villages of Krong No and Nam Ca. The two villages are situated in a highly mountainous and remote area which is barely accessible. It is a region straddling the borders of the provinces of Dac Lac and Lam Dong. The piece of land was formerly a local puppets' base. At that time they deceived the tribal peoples and created a wide net to attempt to wage a protracted struggle against the revolution. After the country was liberated the reactionary henchmen still persisted in their insidious schemes. They wanted to transform the area into a permanent foothold to sabotage the revolution. Through pernicious actions, the reactionaries controlled the tribal peoples and spread propaganda to divide the various tribes.

On receiving their task, cadres and troopers of the 2nd Company swiftly moved to the territory of the two villages of Krong No and Nam Ca. In the early days, cadres and troopers ran into no little trouble and hardship. Controlled by the enemy, the tribal fellow countrymen did not understand much about the revolution. Many families did not even allow the troops to come into their houses. Cadres and troopers were forced to erect tents and build temporary barracks outside the village to live. The local reactionaries even harrassed the unit's camp. Confronted by that situation, the 2nd Company Party Chapter instigated a resolution of all cadres and troopers to hold firmly to their base to eliminate the reactionaries.

Almost all cadres and troopers of the 2nd Company are relatives of the ethnic minorities in the province. They all know the dialects and the local customs. However, because of their limited education, they could not, at first, know how to explain to the local people their tasks. To overcome difficulties, they encouraged themselves to gradually gain the people's hearts through practical deeds.

The Company broke itself down into small teams which lived in with families and worked together with the people. They cleaned roads, dug wells for each family, organized group activities and taught songs and dances to children and youths. Gradually, they earned the people's esteem.

A team led by Y Ton was charged with working in the fields and living with the people every day. Y Ton encouraged the family to plant wet field rice. There was a bountyful crop that year and the whole village lauded Y Ton.

In the village, a number of people still used the slash-burn method. Because of to much rain, the slash-burn slopes yielded a meager crop and the people did not have enough to eat. Cadres and troopers of the 2nd Company set aside rice produced by the Company to give it to the people. The Company's command also gave 53 baskets of rice seeds and nearly 2 hectares of to-be-harvested manioc for the local authorities to distribute among the people to fight famine.

The troops also organized security and hunted wild animals to protect the people's rice fields. Many times they killed wild animals and distributed them to the elderly and to the children in the village. The elderly people realized that the troops understood the people's customs and were deeply moved. One night an old man asked his offspring to light a torch and to take him to the troops to chat. He told many interesting stories about work and about protecting the village.

Organization of the militia in the two villages was also rapidly consolidated and developed. Many youths enthusiastically enrolled into the militia and actively participated with the troops to guard and protect the village.

After a long and tireless struggle, the cadres and troopers of the Lac District's 2nd Company were really loved by the people. The entire village commended the troops for their dedication and love of the people.

Whenever they saw the villains, the villagers reported it to the troops. Many persons uncovered enemies who had infiltrated our organizations. Ma Anh, a former puppet soldier who had not submitted himself to reeducation, managed to enroll into the village militia and to become its military commander. He frequently supplied food, ammunitions and weapons to reactionaries in the deep jungle to fight the revolution. Many persons were aware of his acts but were subdued by him. After being educated, the people reported Ma Anh's acts and volunteered to lead the troops to ambush him and caught him red handed when he was hiding weapons.

In close cooperation with the people in the last 2 years, the warriors of the Lac District's regional forces 2nd Company have become very close with the Mo Nong and E De peoples in the Krong No and Nam Ca villages.

Tracked down relentlessly by the troops and by the militia, the reactionaries did not dare come to the villages to steal rice and to kill people like before. However, they still gathered in the deep forests to sabotage other areas. Confronted by that situation and aided by the local people, the 2nd Company formulated a coordinated plan to strike the enemy.

The first platoon commanded by Krai and assisted by the militia who led it to Du Trong District was charged with tracking down the villians. Chasing the enemy for a long time, the cadres and troops exhausted their rations. Krai encouraged the unit to dig wild corms to eat and continue the search. The warriors had to sleep in the jungle and on trees but with dedication and patience, they continued their task. After 10 days, the unit discovered the enemy. Under Krai's command, the unit surrounded and completely eliminated an enemy group. The troops seized all their weapons and documents. Not satisfied with his first victory, Krai still led the unit in continuing the ambush for 1 more week and uncovered the whereabouts of the leader of the reactionaries. He was a former puppet major. Krai gave the squad commanded by Ro Yam Bnong the mission to attack the enemy. Five smart warriors succeeded in penetrating the enemy sanctuary in K village. They took six prisoners and found the organizations that helped them. With the new victories, the unit gained more confidence and love of the people.

In their process of chasing and sweeping the enemy, the 2nd Company established many bases in the montagnard villages, organized many strong milita units and actively provided security and safety for the working and productive lives of the local people.

COMMEMORATION OF NAM BO RESISTANCE DAY REPORTED

Hanoi QUAN DOI NHAN DAN in Vietnamese 24 Sep 81 p 1

[VNA News Release: "Solemn Celebration of the Nam Bo Resistance Day"]

[Text] The anniversary of the Nam Bo Resistance Day (23 September) was solemnly marked this year in Ho Chin Minh City by elaborate activities aiming at demonstrating the unflinching spirit and the revolutionary-offensive traditions of the City's people and at stepping up the emulation movement to achieve patriotic deeds to welcome the Fifth VCP Plenary Session.

On 21 September, the commemorative ceremony was held at the City Theater Square with the participation of thousands of people. Comrades Nguyen Van Linh, member of the Political Bureau of the VCP Central Committee; Vo Van Kiet, alternate member of the Political Bureau of the VCP Central Committee and secretary of the Municipal VCP Committee; Mai Chi Tho, member of the VCP Central Committee and chairman of the City People's Committee and many revolutionary warriors who had directly participated in the Nam Bo Resistance Day were in attendance.

The Consul Generals and representatives of foreign organizations in Ho Chi Minh City also attended.

Comrade Le Dinh Nhon, vice chairman of the City People's Committee read a statement recalling the historical meaning of the Nam Bo Resistance Day and the immediate tasks of the City. Comrade Nhon highlighted the resolution of and measures taken by cadres, workers, employees and the City people in the important emulation phase from now until the end of the year whose objective is to complete and exceed the 1981 state plan in order to create a momentum to carry out the historic resolutions of the Fifth Plenary Session of the Party.

On this occasion, the City organized cultural and art shows and physical education and sports events for 3 days. Besides contests that took place at precincts and districts, the Physical Education and Sports Service held citywide tennis, swimming, table tennis, volley ball and bicycle racing championships; all precincts and districts coordinated their efforts in organizing demonstrations of forces and hotly contested tournaments in the whole City.

At the City's main recreation centers, cultrual festivals were organized to celebrate the Nam Bo Resistance Day.

The women's associations, the youth and elderly groups of all levels invited knowledgeable revolutionaries, heroes and emulation warriors to talk about the traditions and activities relating to production and combat.

Paris DOAN KET in Vietnamese 17 Oct 81 p 1

[Article by Phong Quang: "Homecoming Overseas Vietnamese Visit to Intershops." For related article see JPRS 79371, 4 November 1981, No 2319 of this series, pp 25-26.]

[Text] Intershop, Imex...these far-out sounds have become familiar words to overseas Vietnamese who go home for a visit. Imex (in Ho Chi Minh City) and Unimex (in Hanoi) are shops reserved exclusively for people at home who have received foreign currency from their relatives abroad, who have exchanged it at the State Bank and who have been issued a "foreign exchange certificate" (cf article entitled: "Send money and/or gifts" published in DOAN KET issue No 315). As for Intershops, they are reserved for foreign currency owners including foreigners (either permanent or temporary residents or tourists) and also overseas Vietnamese coming home for a visit. There are an Intershop in Giang Vo Street, Hanoi, and another at the corner of Nguyen Hue and Le Loi Boulevards, Ho Chi Minh City. In addition, at the Ben Thanh commercial center (formerly Rex commercial center), there are other shops which are reserved for people processing foreign currency or holding a "foreign exchange certificate" and which "compete" with Intershops and Imex. Similar small shops are found also in international hotels.

What can customers buy at these shops? They can buy food products such as milk, candies, chocolate, monosodium glutamate, coca-cola, canned beer, wine and liquor or they can buy appliances such as flashlight batteries, electric bulbs and fans, radio and television sets. These goods come from many sources: They are Vietnamese on-the-spot export commodities (such as Blao aromatic tea, "Con O" [Eagle Brand] flashlight batteries, fine arts products) or state-purchased merchandises (in case overseas Vietnamese send to their relatives at home a too large quantity exceeding the norms fixed for gifts, for instance, thousands of "Bic" pens and hundreds of watch batteries) but, to date, the bulk of these goods is constituted by commodities imported by the state with the objective of serving customers and obtaining more foreign currency.

This is an essential service which proves beneficial from many points of view. For the state, it provides a noticeable source of foreign currency and, at the same time, helps limit market monopoly caused by contraband importation (by land from Thailand or by sea). For overseas Vietnamese, Intershops provide them with food products and merchandises which they may use as gifts to their relatives at home according to the latter's desire and which they do not have to take the trouble to carry into the country from abroad.

The Other Side of the Coin

Like some other service installations, Intershops still have many facets which must be improved and even changed completely if these shops are to exactly fulfill their task of serving the interests of the state and customers.

First, the composition of goods sold at Intershops is still insufficient in view of the buyers' demand and the state policy (which is to encourage the importation of raw materials and equipment useful for production purposes but, to our knowledge, Intershops have not yet paid attention to these categories of goods).

It is most important to point out the following situation: In the recent summer, overseas Vietnamese who visited Intershop in Ho Chi Minh City could not buy merchandises; but if they agreed to buy on commission for traders waiting at the gate (and even inside the shop), they could immediately buy almost anything they wanted, including the goods not displayed on the counter! Clearly, there was a brazen underhand dealing between the black market network and the Intership personnel (since this agency is a small one with not many employees, it is hard to believe that the board of directors is unaware of this state of affairs).

The root cause of this situation is the loose management of foreign currency: Since anyone holding a passport is entitled to use foreign currency to buy goods at Intershop, traders have hired overseas Vietnamese or foreigners to use "smuggled" foreign currency to buy merchandises from the shop and, worse still, have acted in connivence with the shop personnel to take out goods and sell them right on the sidewalk in front of the shop gate. Some shallow-minded overseas Vietnamese have been tempted by such an easy profit and have become the traders' instrument, creating a bad image of the overseas Vietnamese in the mind of the state cadres and employees who are struggling against very great difficulties in their daily life.

"Dollar A"

In order to end this situation, as of 1 August, the Vietnam Foreign Trade Bank has issued "coupons in lieu of foreign currency" of 1- or 5-dollar denomination, which are generally called "Dollar A." All the services to be rendered to foreign visitors such as hotel accommodation, transportation by tourist cars and purchase of goods at Intershop must be paid for by "Dollar A" instead of genuine foreign currency as in the past.

Of course, this measure will help limit, if not completely check, the black market activities; (for example, on the morning of 1 September, a black market "representative" offered to pay us 44 dong for a "Dollar A" when we were inside Intershop).

If staple goods and products designed to promote production are imported in larger quantities, if prices are fixed rationally (on the basis of the price law), if the abovementioned shortcomings are corrected and if the irrationalities inherent in the foreign exchange measures applied during the recent summer are eliminated, the service rendered by Intershops and similar ones will develop their role, prove profitable to the state and meet the needs of homecoming overseas Vietnamese.

Correction

Following is the correction to some printing errors or omissions in the article entitled: "Send money and/or gifts" published in DOAN KET issue No 315:

1. Based on our calculations (and the price situation by the end of August 1981), 1 French franc is equivalent to between 4 and 5 dong (instead of 2 dong as erroneously printed) if gift packages A, B and C are sent home.

2. The amount of 7,000 French frs mentioned in the article is the maximum which each person has the right to declare as a gift to his parents and to deduct from his income in his yearly income tax return (no matter whether he sends money through a bank or pays to B.N.P. [Banque Nationale de Paris?] for sending a gift package A, B or C to his parents). This amount is not the maximum allowed to be sent (because according to the regulations in force in France, each person is allowed to send abroad up to 5,000 French frs each month).

3. Our investigations have confirmed the good quality of the commodities contained in packages A, B and C pertaining to Imex in Ho Chi Minh City (during a period of 6 months, there was only one instance when canned milk was of bad quality and also one consignment in which fish sauce was in short supply and had to be replaced by another merchandise). However, according to some of our readers and to the Vina-Paris Company's confirmation, there were many cases when the goods packages belonging to Unimex Hanoi were of bad quality. Vina-Paris has contacted Unimex and requested it to correct such mistakes. We will notify our readers of any further specific development.

BRIEFS

SOVIET GIFTS--Hanoi, 1 Nov (VNA)--I. A. Novikov, first secretary of the Soviet Embassy in Hanoi, today handed gifts from the All-Union Central Council of Trade Unions of the USSR over to the Hanoi branch of the Vietnam Federation of Trade Unions. The gifts are for those engaged in the building of the Hanoi Palace of Culture financed by the All-Union Central Council of Trade Unions. Present at the reception of the gifts were representatives of the Vietnam Federation of Trade Unions and the city people's committee, officials from the Soviet Embassy and Soviet experts. DRAMA TROUPE IN USSR--Hanoi, 4 Nov (VNA)--A Vietnamese "tuong" (classical drama) troupe has arrived in the Soviet Union on a performance tour. The troupe gave its premiere in Moscow on the evening of November 2. This is the first Vietnamese "tuong" troupe to visit the country. [Text] [OW051225 Hanoi VNA in English 1526 GMT 4 Nov 81]

VISIT FROM INDONESIAN JOURNALISTS--Hanoi, 4 Nov (VNA)--A delegation of the Indonesian Journalists' Association arrived here today for a visit and to discuss future cooperation between the journalists' associations and the press of the two countries. The delegation is led by Harmoko, president of the Indonesian Journalists' Association and president of the Indonesian State Press Council. It includes Atan Ruswita, vice president of the Indonesian Journalists' Association and editor-in-chief of the paper PIRIKAN RAKYAT in Bandung, and Asegaff, general secretary of the Indonesian Journalists' Association. It was welcomed at the airport by Hoang Tung and Luu Quy Ky, respectively president and general secretary of the Vietnam Journalists' Association, Le Chan, assistant director general of VIETNAM NEWS AGENCY, and other representatives of the Vietnamese press. SOVIET-BUILT ENGINEERING SCHOOL--Hanoi, 11 Nov (VNA)--Construction of a job-training school named "Vietnam-USSR Agricultural Engineering Workers' School" is nearing completion. Built with Soviet aid in Tam Diep District, Ha Nam Ninh Province, over 100 km south of Hanoi, the school has a 500-seat meeting hall, and a 3-story building with 14 classrooms and office rooms, for the students' practice. There are 3 workshops and a 6-hectare open-air schoolyard. After 2 years' training, the students will be equipped with the necessary knowledge and skills of engineering workers specializing in welding, metal cutting, and repair of engines for automobiles, tractors and other farming machines. In the 1980-81 school year, the school enrolled 300 first students who are studying with the help of Soviet specialists. [Text] [OW111137 Hanoi VNA in English 0240 GMT 11 Nov 81]

SOVIET CINEMATOGRAPHIC DELEGATION--Hanoi, 10 Nov (VNA)--A Soviet cinematographic delegation has visited Vietnam on the occasion of a Soviet film week in honor of the 64th anniversary of the October Socialist Revolution. While here the Soviet guests visited film studios in Hanoi and Ho Chi Minh City and exchanged views with their Vietnamese colleagues, especially on the making of films for children. AWARD TO BRITON--Hanoi, 13 Nov (VNA)--The Vietnamese Friendship Order was conferred on Jack Askins, secretary of the Northwest Britain-Vietnam Association, on November 7. In a ceremony held in Manchester on this occasion the Vietnamese ambassador in Britain, Tran Hoan, said the Vietnamese people would never forget what British friends had done for them. At the end of the ceremony Jack Askins handed over to Tran Hoan samples of 3,000 ball point pens collected for Vietnamese pupils. [Text] [OW131337 Hanoi VNA in English 0716 GMT 13 Nov 81]

INDIAN JURIDICAL DELEGATION--Hanoi, 13 Nov (VNA)--An Indian juridical delegation led by P. Shiv Shankar, minister of law, justice and company affairs, arrived here this afternoon for a friendship visit at the invitation of the Vietnamese Ministry of Justice. The delegation includes G. L. Dogra, MP Lokh Sabhe; G.Y. Krishanan, MP, Yajya Sabha; Bal Anand, department deputy director of the Foreign Ministry; and K.C. Kappor, secretary to the law minister. It was welcomed at the government guesthouse by Phan Hien, minister justice; Han Anh, president of the Vietnam Lawyers' Association; and others. Ashok Chaturvedi, charge d'affaires A.I. of the Republic of India here, was also present. [Text] [OW160157 Hanoi VNA in English 1509 GMT 13 Nov 81]

FOOD AID FOR CHILDREN--Hanoi, 13 Nov (VNA)--Larry E. Ward and Dulal Borpujari, respectively president and vice-president of food for hunger, have recently visited Vietnam. They had working sessions with the mother and child care commission and agreed to provide Vietnam with 2,400 tonnes of soybean from 1982 to 1984 to be made into baby food. They also presented the commission with a Yokota touring bus. [Text] [OW160157 Hanoi VNA in English 1456 GMT 13 Nov 81]

BRITISH MEDICAL AID--Hanoi, 13 Nov (VNA)--The British Committee for Medical and Scientific Aid for Vietnam has placed an order with the German Democratic Republic for 7,500 pounds' worth of medicines for Vietnam. The committee has also collected more than 10,000 signatures for a petition to the council of the European Economic Community urging resumption of aid in milk powder to Vietnamese children. Meanwhile 19 mass organizations and many social activitists in Britain have sent letters to the UN secretary general and the British foreign secretary demanding the expulsion of the Pol Pot clique from the United Nations. ECONOMIC PLANNING, TRADE AND FINANCE

NEW SYSTEM OF AGRICULTURAL REQUISITION-PURCHASE PRICES ANNOUNCED

Hanoi NHAN DAN in Vietnamese 10 Oct 81 p 1

[Article: "Requisition-Purchase Prices of Agricultural Products and Prices of Agricultural Production Means"]

[Text] On 26 September 1981 the Council of Ministers issued Decision No 95/HD BT regarding the requisition-purchase prices of agricultural products and the prices of agricultural production means applicable for the collective economy and the family economy in the north, the southern Trung Bo coastal provinces, and the Central Highlands.

The Council of Ministers set forth the formula and guidance prices for the requisition-purchasing of the various kinds of agricultural products:

1. The requisition-purchasing prices of agricultural products must be determined in the relationship of the over-all national economy, and must be intended to promote the development of production, encourage the agricultural cooperatives, production collectives, and peasants to set aside many products to sell to the state, further the cooperativization movement in agriculture, and consolidate the new production relationships in the rural areas.

2. The requisition-purchase prices must be based on rational productivity and production costs, and must assure that the producers are reimbursed for their production expenses and earn a suitable profit.

3. They must assure a rational ratio between the purchase prices of agricultural products and the prices of production means and state consumer goods sold to the peasants in accordance with the general principles that the state does not have to make up for deficits and that the cooperatives, production collectives, and peasants all benefit.

4. The requisition-purchase prices of paddy in the northern provinces, along the southern Nam Bo coast, and in the Central Highlands are based on the standard of the price of paddy in the Red River Delta, and there is assured a rational disparity among the various areas based on their production conditions (soil, water, weather, and climate). The purchase prices of the various kinds of subsidiary food crops (corn,dried potatoes, dried manioc) and the various kinds of agricultural products used as raw materials for industry and export are based on the purchase prices of

paddy and the rational production costs of each type of agricultural product, in accordance with a rational price relationship among the various kinds of crops in the different production areas.

5. In the requisition-purchasing of agricultural products in the above-mentioned localities, the state applies two price policies: obligatory purchasing at stabilized guidance prices and extra-obligatory purchasing at negotiated prices.

With regard to the requisition-purchasing prices of the various kinds of agricultural products:

1. The purchase prices of grain sold on an obligatory basis:

a. Paddy prices:

Area 1, consisting of the provinces of Thai Binh, Hai Hung, Ha Nam Ninh, and Ha Son Binh (except for the former Hoa Binh Province), and the municipalities of Hanoi and Hai Phong. The current purchase price of .52 to .56 dong per kilo is increased to 2.5 dong, and in difficult production areas it is increased to 2.75 dong.

Area 2, consisting of the provinces of Vinh Phu, Ha Bac, and Thanh Hoa. The current price of .56-.60 dong per kilo is in creased to between 2.75 and 3.00 dong.

Area 3, from Nghe Tinh to Thuan Hai. The current price of .60 to .65 dong per kilo is increased to 3.00-3.30 dong. In places with especially difficult conditions the prices is increased to 3.50 dong.

Area 4, consisting of the provinces of the mountain region and the high-altitude areas of the three regions mentioned above. The current price of .65 to .72 dong per kilo is increased to 3.30-3.50 dong.

b. The purchase prices of corn, dry potatoes, and dry manioc:

-- The purchase price of corn in Nghe Tinh and the mountain region, now .65 dong per kilo, is increased to 3.20 dong. In the Red River Delta and other areas the current price of .58 dong per kilo is increased to 2.75 dong.

-- The purchase price of dried sweet potatoes, now .65 dong per kilo, is increased to between 2.70 and 3.20 dong, depending on the production conditions and the subsidiary food consumption customs in each area.

-- The purchase price of dried manioc, now .75 dong per kilo, is increased to between 60 and 120 percent of the paddy price in that area, depending on the production conditions, yields, and quality, and on whether it is consumed like grain or used as raw material for industry.

2. The purchase prices of animal products sold on an obligatory basis:

The purchase price of live hogs (based on the standard of a hog weighing between 40 and 60 kilos) is 18 to 20 dong per kilo.

The purchase price of pork in the food-producing belts around the cities and industrial zones is increased to 10 percent more than the guidance price sothat it can serve as a stimulant.

3. The purchase prices of the other agricultural products sold on an obligatory basis are as follows:

Product	Unit	Current Price	New Price
Soybeans	dong/ton	2,000	10,000
Mung beans	"	2,000	9,500
Black beans	"	1,500	7,200
Other beans	"	1,300	6,200
Yellow sesame	"	2,500	12,000
Black sesame	"	2,900	14,000
Unshelled peanuts	"	1,500	8,000
Shelled peanuts	"	2,100	11,000
Cured yellow leaf tobacco	"	5,100	25,000
Dried brown leaf tobacco	"	3,100	15,000
Waterpipe tobacco	"	5,600	27,000
Fresh bud tea	"	750	4,000
Semi-processed dry tea	"	5,000	26,500
"Che" coffee	"	7,600	44,000
"Voi" coffee	"	6,500	32,000
"Mit" coffee	"	3,900	22,500
"10 letter" sugarcane	"	82	400
F134 sugarcane	"	71.5	350
Multi-strand silkworm cocoons	"	6,850	40,000
Two-strand silkworm cocoons	"	9,300	56,000
Uncarded cotton	"	3,400	16,500
Cured soaked jute	"	1,200	7,500
Separate-spathe jute	"	680	4,200
Green soaked jute	"	1,700	10,600
Green-spathe jute	"	1,250	7,500
Rush	"	500	2,700
Cochineal	"	4,900	23,500
Kamala	"	18,600	90,000

60° lacquer	"	14,000	100,000
Castor oil seeds	"	2,200	11,500
Betel nuts	"	1,200	6,500
Coconuts	"	450	2,200
Bananas	"	400	2,200
Husked coconuts	dong/1,000	700	3,400
Type-1 export orange	dong/ton	600-1,100	3,500
Peppercorns	"	30,000	95,000
Honey	"	12,500	60,000
Anise	"	2,000	10,000
Type-1 double cinnamon	"	3,600	25,000

The selling prices of some principal agricultural production means, according to two-way economic contracts:

Product	Unit	Gia-Lai, Kon Tum, Dac Lac, Nghia Binh northward	Phu Khanh, Thuan Hai, Lam Dong	Binh Tri Thien, Zone 5, Thuan Hai, Lam Dong	North of Nghe Tinh
Urea fertilizer	dong/kg	7.50	8.00		
Sulfate fertilizer	"	3.80	4.00		
Calcium sulfate	"	3.80	4.00		
Calcium chloride	"	2.80	3.00		
Superphosphate	"	2.80	2.70		
Diesel oil	dong/liter			7.50	6.50
Gasoline	"			8.50	7.50

-- The insecticide prices are based on Decision No 35-VGNN-TLSX, date 28 August 1981, of the State Price Commission.

-- The standard charge for the labor request to tractor-plow a hectare is 250 dong north of Thuan Hai.

The irrigation fees will be made public later.

With regard to the organization and guidance of implementation.

1. The implementation of the above-mentioned policy of guidance buying and selling prices must be accompanied by the promotion of production, the improvement of economic management, socialist transformation, the perfection of socialist production relationships in agriculture, the strengthening of market management, etc.

2. The State Price Commission and the people's committees of the provinces and municipalities must, along with the information and propaganda organs, explain the policy very broadly so that the peasants and cadres can clearly understand the states policy of readjusting the requisition-purchase prices of agricultural products, the selling prices of production means, and the retail prices of consumer goods, in order to serve and stimulate the development of production, and the suitable resolution of the relationships between accumulation and consumption, between the state and the peasants, and between the workers and the peasants.

3. On the basis of the standard prices in this decision, the State Price Commission cooperates with the requisition-purchasing and supply ministories determine and make public the specific buying and selling prices according to the type and quality of eachproduct.

The lists of agricultural products requisition-purchasing prices and the lists of agricultural production means in each locality must be made public. The localities and the state and collective requisition-purchasing and supply organizations must correctly obseve those prices as regards the producers, and must not arbitrarily raise or lower prices, which harms the state and the peasants and distorts the price ratios between industrial products and agricultural products, which have been rationally determined by the state.

As regards the differences among the requisition-purchasing prices from area to area, the State Price Commission provides guidance based on the stipulations of Resolution 10-CP, dated 8 January sectors and localities cannot arbitrarily adjust prices from area to area.

Negotiated requisition-purchasing prices are stipulated by the provincial and municipal people's committees in the framework of the guidance prices stipulated for each season and area in accordance with rational relationships between the pruchase prices of agricultural prices and the selling prices of production means.

The State Price Commission, the ministries in charge of requisition-purchasing, and supplying, the people's committees at the various echelons must continually and closely monitor the situation of requisition-purchasing, market management, and prices in order to promptly correct deficiencies and assure the strict observance of the state policies that have been promulgated.

4. The new guidance prices in this decision are applied with regard to the collective and family economic sectors in all localities in the north, the coastal provinces of southern Trung Bo, and the Central Highlands, effective 10 October 1981.

With regard to the products of the state farms, the ministries and general departments managing production must study and approve the enterprise wholesale prices. While awaiting approval they may temporarily apply the above system of purchase prices regarding the collective and family economic sectors.

AGRICULTURAL REQUISITION-PURCHASE PRICES INCREASED

Hanoi NHAN DAN in Vietnamese 10 Oct 81 pp 1,2

[Article by Doan Trong Truyen, Head of the State Price Commission: "Requisition-Purchase Prices of Agricultural Products in the North and the Provinces in Southern Part of Former Trung Bo Increased"]

[Text] 1. Why do the requisition-purchase prices of agricultural prices have to be increased?

Advancing agriculture from small-scale production to large-scale socialist production, creating high yields and output, and meeting the needs of the national economy for foodstuffs, raw materials for industry, and exports are always major concerns of the party and state.

In order to fulfill those requirements, for many years now the state, in addition to investing in water conservancy, fertilizer, new varieties, mechanization, etc., has many times increased the requisition-purchase prices of agricultural products (from .2 dong per kilo of paddy in 1956 to .52-.56 dong in 1980), in combination with the exchange of industrial goods, including both production means and consumer goods. Now, in addition to the measure of contracting-out production to workers and groups of workers, the Council of Ministers, implementing Directive No 109/CT-TW, dated 19 May 1981, of the Political Bureau of the Party Central Committee, has issued Decision No 95/HDBT, dated 26 September 1981, which considerably increased the requisition-purchase prices of all of the principal agricultural products. In view of the fact that the economy is still beset with difficulties and major imbalances, why has the state once again increased the requisition-purchase prices of agricultural products (for about the fifth time)?

First of all, it is being done to stimulate the strong development of agricultural production, promote intensive cultivation, expand the acreage in the newly developed areas, and increase the output of crops and stock raising, expecially grain. If that is to be accomplished, an extremely important matter is that the requisition-purchase prices must be sufficiently high to make up for production expenses under the new conditions, which have changed. At the same time, there must be suitable accumulation for the cooperatives and peasants. In order to achieve intensive cultivation and increase crop yields under the present conditions, we must invest additional fertilizer and labor, and apply new techniques, which will result in increases in both production expenses and capital accumulation, in order to increase intensive cultivation.

The application of the new system of prices of consumer goods and production means sold to the peasants and the other categories (the import prices of most imported production means are 5 to 10 times higher than in the past) also requires that we simultaneously change the system of requisition-purchase prices of agricultural products so that they can be appropriate, and assure that the cooperatives and peasant families can recover their increased production expenses resulting from the changed prices of materials and that their incomes are sufficient to fultill their needs at the new retail guidance prices of consumer goods.

The system of requisition-purchase prices of agricultural products must be placed in the over-all framework of the national economy. At present, the national economy is still seriously out of balance, so the system of requisition-purchase prices must contribute to stabilizing the over-all economic-financial situation, which will both serve to stimulate the development of agricultural production and concentrate sources of goods in the hands of the state on the basis of increasing labor productivity and increasing output so that production can bring about the necessary results, while also creating all conditions for developing industry and effectively promoting our exports to the world.

Especially under the conditions of advancing directly to socialism from the status of a backward agricultural country, the system of requisition-purchase prices must contribute to stabilizing the financial situation (balancing budget and reducing he cash flow) in order to do a good job of resolving the relationship between accumulation and consumption, rationally distribute the national income between industry and agriculture, and gradually create accumulation for industrialization.

The requisition-purchase prices of agricultural products in the north and in the provinces in the southern part of the former Trung Bo are also being raised in order to assure the nationwide unity of the system of requisition-purchase prices of agricultural products were adjusted more than a year ago in the provinces of the former Nam Bo), and of course take into consideration the economic-social characteristics in each region.

2. The crux of the matter is production and productivity:

A very important matter in creating the new system of requisition-purchase prices is that it must manifest both the obligations and rights of the agricultural cooperatives and peasants. The state's requisition-purchase prices both serve to strongly encourage the cooperatives and peasants to promote production and sell agricultural products to the state and demand that production attains productivity and effectiveness, in correct accordance with the state plans, and that agriculture gradually advances to large-scale socialist production. In that spirit, a new system of requisition-purchase prices has been determined for each area on the basis of the average production conditions, with verified productivity and effectiveness.

If those goals are to be attained, the new requisition-purchase prices must be determined on the basis of the expenditures for labor and materials and the attainment of certain crop yields, wo that they can be appropriate to the land, weather, and climate conditions and the other production conditions of each area of the country. If a cooperative or family does a good job and attains high labor productivity and crop yields, with the new prices it will have higher income. On the other hand, if it is deficient and has low productivity, its work-day value will be low and therefore its income will be low. That is also one of the new contents of the current price policy, which is intended to positively affect production, increase labor productivity, lower production costs, and improve quality and economic effectiveness. That is also a method of overcoming the situation of "cost plus" prices due to the acceptance of waste in production and commerce, a way of working that does not take effectiveness into consideration. For example, in producing a hectare of rice in the Red River Delta a place with favorable conditions can attain a yield of about 2.5 tons per season, while material costs (including seed rice, POL, fertilizer, insecticides, soil preparation by tractor, irrigation fees, equipment depreciation, etc.) in terms of paddy amount to 970 kilos, while the remaining 1,530 kilos are divided up among labor and capital accumulation for the collective and the state. If agricultural taxes are paid and captial accumulation is left over for the cooperative, at an average loss of about 650 kilos, the remaining 880 to 900 kilos is divided among the workers. If 300 work-days are required per hectare, the value of a work-day is approximately 3 kilos of paddy, so with the increase of the requisition-purchase price from .52-.56 dong to 2.5-2.75 dong the monetary value of work day would be about 7.5 dong. If only 250 work days are required the value of a work-day would be 3.6 kilos or 9 dong. On the other hand, if 350-400 work-days are required the value of a work day would only be about 2.5 kilos of paddy, or 6 dong.

Therefore, with the new prices the higher the value of labor -- i.e. the greater the effect of investing labor in intensive cultivation -- and ther more we overcome the inflated work-points way of livelihood and thus increase labor productivity and crop yields, the higher will be the incomes of workers and the more real value those incomes will have. Since the average per-capita land area is small, that is also a good way to further intensive cultivation, increase yields, closely combine agricultural labor with small industry, handicrafts, forestry, etc., fully utilize labor and land, and produce many products in order to meet the needs of society.

A matter worthy of attention is that in recent years, although we have made many all-out efforts, in general the quality of a work day and the yields of many kinds of agricultural products have clearly declined. In some places peanuts have provided yields of 1.7 to 1.8 tons per hectare, and even 2 tons, but now the yield is only 7 to 8 quintals. In the past sugarcane yields were 60 to 70 tons an acre, but now such yields are only 30 to 40 tons, at most 50 tons.

In brief, the roots of prices are production, crop yields, and labor productivity. Prices must reflect the productivity and effectiveness of production and commerce. If prices cover irrational expenses that could be overcome, they will not only serve to stimulate production and strengthen management, but will cause the economy to be sluggish and wasteful and will prolong the situation of deficit production and there will be no capital accumulation for the economy. Experience demonstrates that the one-sided raising of the requisition-purchase prices of agricultural products also cannot stimulate production over a long period of time and correctly, but will cause additional imbalances in the national economy.

Raising the Requisition-Purchase Prices of Agricultural Products

3. The central problem in the price system is correctly determining new industrial-agricultural price ratio and the relationship between accumulation and consumption.

In creating the present system of requisition-purchase prices of agricultural products, an extremely important problem is assuring a rational relationship between the requisition-purchase prices of agricultural products and the selling prices of state industrial goods (including both production means and consumer goods), usually called the industrial-agricultural price ratio. Agriculture which advances to large-scale socialist production must be one in an industrial-agricultural structure, so the prices of agricultural products must be considered with regard to the price ratio between agricultural products and industrial products.

That price ratio manifests the worker-peasant alliance with regard to the economy, and is based on a unified industrial-agricultural structure in which agriculture is the basis of industry and industry plays the dominant role in furthering the development of agriculture. Therefore, the industrial-agricultural price ratio must assure production and the living conditions of the peasants and be appropriate to the requirements and capabilities of developing, assuring the living condition of the workers, and strengthening national finances.

Between 1960 and the recent period, in order to possitively support the development of agriculture the state many times increased the requisition-purchase prices of agricultural products in the north, but essentially still stabilized the selling prices of production means and consumer goods, especially those of essential goods. Therefore, the industrial-agricultural price ratio became more and more irrationaly restricted. For example, at present the price of a kilo of nitrogenous fertilizer was only equal to the price of a kilo of paddy, and the price of cotton poplin (before the recent adjustment) was only equal to the price of about six kilos of paddy. Meanwhile, in the socialist countries with developed industries and strong state budgets, and on the international capitalist market, the industrial-agricultural price ratio is two or three times greater than in our country.

Thus an urgent and important matter is that we must readjust the industrial-agricultural price ratio, in the spirit of Resolution No 26 of the Political Bureau. The new price ratio is based on the level of a relatively stable production period (1960-1964), during which production developed well, the economy achieved an internal accumulation of about 15 to 17 percent, the living standards of the peasants and workers were relatively assured and were rationally balanced, market prices were organized, and the free market was not greatly out of proportion. At the same time, the new price ratio takes into consideration the other factors, such as the differences in the production expenses of the industrial and agricultural products sinc since 1960, the present price policy regarding each type of crop and farm animals, the international prices of exports and imports, etc. Especially, with regard to th the ratio between the requisition-purchase prices of agricultural products and the selling prices of production means, the new price system assures that the agricultural cooperatives and the peasants use the means of production in a way that results in clear economic effectiveness. With regard to a number of types of production means and with regard to a number of areas, the state may still have to make up for deficits.

The industrial-agricultural price ratio has also been readjusted in order to assure the relationship between accumulation and consumption, manifest the joint contribution of industry and agriculture to accumulating capital for the building of the material-technical bases of socialism, and assure a rational relationship between the income of industrial workers and the income of peasants, in accordance with the new division of labor and corresponding to the labor productivity of peasants and industrial workers. In areas with favorable production conditions, in which the state invests much capital, which have high productivity, and in which expenses are lower, the land rent will differ and they will make greater contributions to over-all capital accumulation than the other areas.

The new system of requisition-purchasing prices is built on the basis of production and the planned setting of prices. At the same time, market relationships are used in order to have both planned prices and negotiated prices to strongly affect requisition-purchasing in order to control the sources of goods. Furthermore, it does not allow free market prices to rise and upset the price ratio, thus exerting a negative effect on production and life, especially as regards salary earners. Negotiated prices are in fact also prices guided by the state, and are not based on free market prices. The use of negotiated prices must also be closely combined with the exchange of goods, in accordance with a rational price ratio, and we must go all-out to restrict the release of much cash on the market.

The industrial-agricultural price ratio is determined in a planned manner, is viewed comprehensively, has a proper economic base, and is not based on the price ratio of the free market. After it has been set, the endeavor to maintain the relative stability of that price ratio will have a very great effect on stimulating production. It is an important condition for strengthening the exchange of goods between industry and agriculture and strengthening requisition-purchasing in order to concentrate the sources of agricultural goods in the hands of the state.

The new system of requisition-purchase prices must assure rational differences among the different kinds of agricultural products, among the various crops, between croop and animal husbandry, and between grain and food products. Disparities between the purchase price of paddy and the purchase prices of peanuts, jute, sugarcane, etc., disparities between the purchase price of paddy and the purchase price of pork, etc., are determined on the basis of the disparities in crop yields, expenses, and income per work day or per hectare among the various kinds of crops, in order to stimulate the all-round development of agriculture and stress grain, food products, and industrial crops along the lines of the state plan.

Because many kinds of industrial crops are processed from agricultural raw materials, the requisition-purchase prices of agricultural prices and the selling prices of agricultural prices and the selling prices of industrial goods processed from agricultural raw materials must be rationally related, in the spirit of the prices of all types of goods having to reflect rational production expenses, with the necessary accumulation for production and a portion contributed to over-all accumulation. However, with regard to the other types of goods the state implements different accumulation and consumption policies. With regard to some things, such as grain and essential food products, the state sets low retail prices and must make up for large deficits. With regard to other things, such as tobacco, spirits, beer, fragrant tea, wool, leather, etc., the state sets high prices and makes a profit in order to regulate consumption and redistribute the national income. Therefore, we should, based on requisition-purchase prices on high state retail prices, demand that the requisition-purchase prices be raised. (For example we should not request that the requisition-purhase prices of sugarcane or tobacco be increased on the basis of the prices of sugar or cigarette tobacco.)

4. The bottom line is productivity, quality, and economic effectiveness.

The system of requisition-purchase prices is calculated on an all-round basis, as mentioned above, in order to assure productivity, quality, and economic effectiveness on the part of each unit and producer, on the part of each locality (province and district), and on the part of the national economy as a whole. By means of improving productivity, quality, and economic effectiveness in the national economy, it affects the relationships between industry and agriculture, between captial accumulation and consumption, between the living conditions of the workers and those of the peasants, between the state -- the representative of society as a whole -- on the basis of doing a good job of resolving the economic benefits.

In the goods-exchange relationships with foreign countries, the requisition-purchase prices of agricultural prices play an important role in assuring economic effectiveness by means of determining the price ratio between our currency and foreign currency. In its turn, that price ratio will be one of the principal bases on which to determine the prices of imported materials and goods, but those prices also affect production expenses, production costs, requisition-purchase prices, and retail prices. Under the conditions of the economy still having to rely to an important degree on imported materials and technical goods, that has a very great significance. The higher the requisition-purchase prices, the more must be spent for exports in order to have a unit of foreign exchange, and therefore the lower economic effectiveness is.

Requisition-purchase prices must strongly stimulate the production of exports and the importation of useful and beneficial production means (with regard to both goods and value, but essentially with regard to goods). But we should not for that reason request that domestic requisition-purchase prices be increased when we see that international prices increase, which both affects the state's accumulation of foreign exchange, creates difficulties of foreign exchange, creates difficulties in the guidance of requisition-purchase prices, and may very easily lead to the destruction of the unity of the system of domestic requisition-purchase prices.

Furthermore, if the requisition-purchase prices are high and the exchange rate chang changes, the selling prices of imported agricultural materials must also be raised, and in the end the peasants will have to pay more for them.

5. The decisive matter is organizing the implementation of the state's new requisition-purchase price.

The state's guidance prices for the requisition-purchasing of agricultural products is a very important policy for positively assisting and stimulating the development of agriculture along the lines of the state plan, assuring the incomes and living conditions of the peasants, and implementing the policy of the worker-peasant alliance on the economic front. But we should not simplistically think that increasing the requisition-purchase prices automatically stimulates production, or that once those prices are increased production and requisition-purchasing will be good. Prices cannot be separated from the economic structure, the organization of production, and the economic management structure in general. Therefore, so that the new system of requisition-purchase prices can exert an effect on agricultural production a matter of decisive importance is that we must combine the implementation of the price policy with a whole series of matters regarding economic development planning, the other economic policies, and management organization. We must always base ourselves on production, do a good job of planning agricultural development, invest in the right way, and assure that investment brings about the necessary economic effectiveness. In distribution and circulation, the organization of the requisition-purchasing of agricultural products can achieve good results only if it is accompanied by the concentration of industrial goods in the hands of the state, the good organization of the supplying of such production means as fertilizer,POL, insecticides, machinery, agricultural implements, etc., and consumer goods to serve the lives of the peasants, including grain for the areas specializing in growing industrial crops. We must do a good job of combining direct two-way contracts between the economic organizations of the state and the producers, according to stable state prices and price ratios during each period. Prices must be made public so that the people can be informed, and not allow an organ or a commercial organization to violate the price policy, and not allow private merchants to compete with the state in buying agricultural products, which would put the peasants in a bind and create chaos with regard to market prices.

The new system of agricultural products requisition-purchase prices also can only have a good effect on the basis of directly carrying out socialist transformation, consolidating and perfecting the new production relationships, good market management, and the strict implementation of the state regulations regarding the requisition-purchase plans, the distribution of goods, finance, currency, and prices.

THEFT OF WHEAT FLOUR BY CARRIERS, PROCESSORS DISCLOSED

Hanoi NHAN DAN in Vietnamese 29 Sep 81 p 3

[Article by Le Nguyen, Hanoi, in "Readers' Opinion" Column: "Wheat Management Is Still Bad"]

[Text] Restaurants and peddlers in Ho Chi Minh City have to use wheat flour to make snacks and cakes. The price of wheat flour in this city is, therefore, several times higher than that in Hanoi. Such a price difference has exerted an attraction for several months. Many people have taken this opportunity to deal in wheat flour and have made a profit amounting to thousands of dong. Control stations along Route 1 from North to South Vietnam have uncovered the illegation transportation of dozens of tons of wheat flour by many truck drivers. The public security forces of the railroad sector have also detected some more serious cases; for example, in early June 1981, they confiscated a railroad car containing 21 tons of wheat flour and departing from the Giap Bat railroad station and, recently in early August 1981, they discovered a car loaded with 22 tons of wheat flour contained in still intact bags at the Vinh railroad station. The owner of these tons of wheat flour was the chief of the merchandise transportation department of the Saigon railroad station. He was entrusted by the railroad station chief with transporting some dozens of tons of rice to North Vietnam where he sold them and bought wheat flour with the intention of sending it to South Vietnam and selling it to make an illegal profit. This "merchandise owner" got in touch with a cadre at the Nam Dinh municipal grain bureau, obtained, through bartering with the latter, 6,600 kgs of wheat flour contained in still intact bags and had it carried onto the train. Where did he buy the remaining amount of wheat flour? He bought it from "businessmen." These bad elements had bought all kinds of vermicelli and exchanged it with contractual vermicelli producers for wheat flour contained in still intact bags which they would send to South Vietnam. In this respect, it is necessary to point out that contractual vermicelli producers in Hanoi have been loosely controlled. Proof is that, in 1979 and 1980, the grain bureau at the Hai Ba Truong Precinct allowed a number of contractual processing installations to steal 30 tons of good-quality wheat flour and 33,000 bags (a bag costed only 5 dong in Hanoi but 10 dong in Ho Chi Minh City). With this quantity of wheat flour and bags, the illegal dealers made a profit of hundreds of thousands of dong. A contractual producer residing at 177 Hue Street was arrested and detained after stealing 8,000 kgs of wheat flour and thousands of bags. This did not include the amount of wheat flour which contractual processing installations brazenly bartered with businessmen for vermicelli which was subsequently delivered to the grain bureau. They even took many tons of coal supplied at a low price and resold it at a higher price. The Lien Thanh cooperative which was also located in Hai Ba Trung Precinct even dared mix ground feed with wheat flour in making vermicelli in order to be able to withhold a portion of wheat. The culprit was sentenced to 20 months in prison.

Why has the management of the contractual processing of wheat flour been so loose? How can the grain bureaus ignore these derelictions which are obvious to everyone? Though various opinions have been expressed with regard to the management of contractual wheat processing, the Hanoi Grain Service has not yet provided an adequate solution. The dismissal of the chief of the grain bureau of the Hai Bai Trung Precinct following the misdeeds in 1979 and 1980 does not suffice to overcome the negative practices still prevalent in the management of contractual vermicelli production.

Wheat flour is a strategic commodity which the state has had to pay foreign currency to buy from other countries. Stealing wheat flour from the state is, therefore, a serious crime. Loose management and leniently dealing with infractions are two reasons for heavy losses of property. It is necessary for the Hanoi grain sector to reconsider its method of managing contractual production and to take strict measures to check the theft of wheat flour and bags in contractual processing installations.

TRAIN DRIVERS CARRY CONTRABAND GOODS

Hanoi NHAN DAN in Vietnamese 29 Sep 81 p 3

[Article by Thanh Dieu, Ha Bac, in "Readers' Opinion" Column: "Transporting Contraband on Trains"]

[Text] Driven by Ngo Ngoc Anh, train No 1015 departing from the Luu Xa railroad station arrived in Bac Giang at 1600 on 6 August 1981. After keeping watch from the beginning, members of the railroad public security forces and the people's forestry sector in Bac Giang City caught the carrier in the act of illegally transporting state-managed merchandises. While searching the locomotive, public security agents found 20 ironwood cases, nearly 300 kgs of shredded tobacco and more than 150 kgs of dried aniseeds. Also at 2300 on the same day when the train with locomotive No 110 driven by Trieu Duc Le stopped at the Bac Giang railroad station, members of the public security forces and the people's foresty sector again uncovered 18 ironwood cases and more than a quintal of dried aniseeds. We have learned from the reports drawn by the municipal people's forestry service that the two train drivers deliberately hid contraband goods under the water tanks of the locomotives (all of these goods were carefully packed in plastic bags). The act of both train drivers was contrary to law. The people are waiting for a severe punishment by the local court of justice.

ECONOMIC PLANNING, TRADE AND FINANCE

BRIEFS

SON LA NEW ECONOMIC ZONES--Since 1978 Son La Province has reclaimed more than 5,000 ha of virgin land and gradually stabilized the daily life of more than 40,000 tribesmen at various new economic zones. The province has also built for these zones 150 kilometers of road, 12 water conservancy projects, 11 schools, many sport clubs and playgrounds. Many agricultural cooperatives in the area have embarked on production and some have sold to the state hundreds of tons of grain and other products. [BK041031 Hanoi Domestic Service in Vietnamese 1430 GMT 1 Nov 81]

HAI PHONG RESETTLEMENT--Over the past 2 years, along with encouraging and helping more than 63,000 people to resettle in various northern provinces, Hai Phong has intensively opened virgin land to build its own new economic zones. To date the city has set up 12 new economic zones, with each covering 500 to 2,000 hectares of land. [BK051113 Hanoi Domestic Service in Vietnamese 2300 GMT 4 Nov 81]

RESETTLERS FROM HAI HUNG, OTHERS--Since early this year Hai Hung Province has resettled 778 families comprising 3,759 people in various new economic zones in Gia Lai-cong Tum and Quang Ninh provinces. As of 20 October, Thai Binh Province had sent 1,958 families consisting of 9,280 people, 80 of them party members, to 10 state farms and many cooperatives in Kien Giang, Song Be, Dac Lac and Thuan Hai provinces. Meanwhile, since early 1981, Lam Dong Province has received more than 1,600 families comprising 8,359 people from Ha Son Binh, Ha Nam Ninh and Binh Tri Thien provinces to build new economic zones in various localities. NGHE TINH TO SEND 200,000 PEOPLE TO NEW ECONOMIC ZONES IN NEXT FIVE YEARS

Hanoi NHAN DAN in Vietnamese 7 Oct 81 p 2

[Article by Ba Muoi: "Nghe Tinh Redistributes Labor"]

[Excerpts] With 2.2 million hectares of land, Nghe Tinh is divided by Nature into three economic zones characterized by imbalance between areas and populations. The average area in the delta is too low, with 97 coastal villages averaging less than 1 sao Trung Bo (1 sao Trung Bo: 497 square meters) per person. Main occupations such as handicrafts and production of building materials are also concentrated on the delta. By contrast, the midlands and mountainous region where land is fertile and rich in raw materials, are not used for on-the-spot production of goods. In light of these realities, Nghe Tinh has redistributed workers over the past 5 years, patiently mobilizing the people to leave for new economic zones inside and outside the province. Since their arrival in the new economic zones inside the province, 9,830 families with 49,146 persons and 16,383 laborers, have set up 31 agricultural cooperatives and 62 mixed production units with local participation. In Dac Lac, 2,780 families with 13,154 persons and 5,710 laborers, including 648 party members, 114 cadres ranging from party committee members, village party committee secretaries, to district party committee members, as well as 52 physicians and nurses, and many basic general education teachers, have reinforces 8 state farms, one brick-and-tile enterprise, and set up three cooperatives in the new economic zone.

Following reception of the labor reinforcement from Nghe Tinh, the state farms of Thang Loi, E Tua, Phuoc An, Phu Xuan, Duc Lap, E Phoc and Quang Phu, have clearly improved labor quality and strengthened ideological organization. Many members of the self-defense forces who are workers from Nghe Tinh, have valiantly fought to exterminate reactionaries and protect state farms. Twelve out of 20 model coffee pickers in Dac Lac hail from Nghe Tinh. With valiant fighting achievements and creative labor, the Nghe Tinh people now living on their new native land of Dac Lac, have earned the trust of local party committees and administrations.

In the next 5 years, Nghe Tinh will send 200,000 people to new economic zones inside and outside the province. Some 150,000 of them will leave the province, mostly for Dac Lac, Play Cu in Gia Lai-Kon Tum and Dong Nai Province as well as Mekong Delta Provinces, with a double task:

1. Organize state farms in Dong Thap and Kien Giang. Laborers and building materials will be sent there. With local materials and materials brought from Nghe Tinh, they will build houses. Then people will be sent in to take up production to be followed later by the remaining settlers.

2. Set up mixed cooperatives, some with state investment and others formed by the people on a voluntary basis, with members sharing some kind of family relationship, and receiving state assistance.

Mixed cooperatives will be set up mostly in new economic zones inside the province. Additional zones whose economy will be tied in to national defense will be opened up in Que Phong And Quy Chau to exploit forestry, agriculture and production of building materials, so that by 1985 the above districts will have from 40,000 to 50,000 people.

--Efforts will be concentrated on Tan Ky and Anh Son (Binh Thanh Thao, Huong Phu Hanh) for wet rice and sugarcane planting.

--New arrivals will reinforce and mix with local populations in Nghia Dan and Quy Hop focusing on planting grain crops, surgarcane, vegetables and fruit to support the Quy Hop tin zone.

EDITORIAL ADVOCATES EXPANSION OF SUBSIDIARY FOOD CROP AREA

Hanoi NHAN DAN in Vietnamese 29 Sep 81 p 1

[Editorial: "Try to Expand the Subsidiary Food Crop Area to the Maximum"]

[Text] To reach a solution to the grain problem, agriculture must consider the production of both rice and subsidiary foodstuffs important. In recent years, many localities have tried to rapidly increase the area grown with subsidiary food crops and to simultaneously apply intensive cultivation to rice crops, thus obtaining an evident increase in grain output. Subsidiary food crops of all kinds have also been developed according to the land conditions and to local farming customs and habits. An overall glance at the subsidiary food crops shows that their production rate has been slow in view of possibilities and requirements and that recently there has been a tendency for both their area and productivity to decrease. Because the planned area was not achieved, the recent winter-spring subsidiary food crop yielded only 1.2 million tons in paddy equivalent--a deficit of 2.2 million tons in comparison with the 1981 planned norm. The summer-fall subsidiary food crop also was also grown on 30,000 hectares less than in the same period last year. From now to the end of the agricultural year, there remain only the fall-winter and winter subsidiary food crops. If efforts are not exerted to fulfill or overfulfill the area and productivity norms in these production seasons, it will be impossible to fulfill the yearly grain production task.

The immediate task of the agricultural production sector is to quickly harvest the summer-fall subsidiary food crops, to overfulfill the area reserved for the summer-fall subsidiary food crops and to apply the intensive cultivation method, especially in the provinces of North Vietnam.

Winter is a more favorable season for expanding the cultivated area by increasing the number of crops and by growing many types of short-term plants the cultivation of which is easy, does not require a large capital investment and has great economic effects. The winter agricultural season is fast becoming the principal production season. On reckoning, it has been found that the output of the most productive winter subsidiary food crop is nearly equal to the total yearly yield of all other subsidiary food crops. If different farming methods are applied, greens and legumes of all kinds will yield a large volume of products.

Compared with the previous season, the winter season this year will see a 1.6-fold increase for sweet potatoes, an increase of nearly twofold for corn, a 1.2-fold increase for potatoes, a 5.5-fold increase for soybeans and also an increase for all other types of greens and legumes.

The winter agricultural season has been conducted at a high tempo since the system of product contract with laborers has been broadly applied in almost all northern provinces and cities. Many localities have started growing the winter crops immediately after finishing the harvest.

The task of performing production, harvesting the early rice crop, tending the main rice crop and growing subsidiary food crops must be coordinated and guided in each cooperative, district and province.

There is a need for each locality to promptly correct erroneous practices in implementing production guidelines such as the tendency to consider the pros and cons in an excessive manner before growing each type of subsidiary food crop or to neglect the cultivation of subsidiary food crops if the amount of rice available is considered to be relatively sufficient. In this connection, due attention must also be paid to the three types of benefit.

However, winter weather conditions have usually developed unfavorably under the form of belated rains or early, intensive and protracted cold spells and hoarfrost. Every locality must prepare varied production plans and deploy labor to cope with all situations in order to fulfill the sowing and planting area, to grow crops according to the fixed cultivation pattern and on schedule and also to apply the intensive cultivation method.

The cultivation of subsidiary food crops must be linked to the task of harvesting, transporting, processing and preserving which has not yet been properly organized and which has, therefore, greatly hampered production.

The task of guiding production must constantly be specific, active and comprehensive.

PAY-REWARD SYSTEM IN STATE AGRICULTURAL ENTERPRISES IMPROVED

Hanoi NHAN DAN in Vietnamese 5 Oct 81 p 2

[Article by Nguyen Khac Chan, of the Ministry of Agriculture: "Some Aspects of Pay and Rewards in Agricultural Enterprises"]

[Text] In the process of organizing payment for the work done, state-operated agricultural enterprises have started from low to high standards and have gradually given up simple forms of wage payment and applied more progressive ones. Generally speaking, however, the wage payment method applied by state agricultural enterprises has not yet succeeded in stimulating laborers and in linking the workers' sense of responsibility to the end product. These shortcomings have become manifest through the following specific forms of wage payment:

Wage payment is based on the volume of work done and is associated with rewards for any surplus volume and with regular rewards drawn from the wage fund. This form of payment encourages laborers to pay attention only to the work volume and does not link their responsibility to the end product.

But, under the present circumstances, the quantitative payment method does not induce laborers to surpass the set norms and to achieve an additional volume of work because both the unitary wage and reward are too low. For a Grade-4 farming worker employed in picking tea leaves, the daily output has been fixed at 30 kgs, the unitary wage for picking 1 kg of tea leaves fixed at 0.09 dong and the reward fixed at the 0.009 dong. If he picks up more leaves and surpasses the fixed output by 3.75 kgs--that is, an increase of 12 percent which is equivalent to 1 working hour--, he will receive an additional wage and reward amounting to 0.33 dong. If he picks up even more leaves and achieves an output increase of 25 percent--which is equivalent to 2 working hours--, he will receive an additional 1.72 dong, which is not enough to buy a bundle of vegetables or an egg. If he works 26 days per month and surpasses the productivity norm by 25 percent throughout this period, he will receive only a surplus of 18.72 dong, which is not enough to buy 0.5 kg of pork at the free market. How can such a wage payment method stimulate laborers?

Wage payment according to the end product and in conjunction with the offering of rewards for thrify expenditures and of regular rewards drawn from the wage fund is a method which has been newly applied in a number of enterprises, which has the effect of stimulating laborers and associating their responsibility with the end product but this effect has not yet been felt strongly because the wage and reward received on the basis of the product surplus are still very low. For a Grade 4/5 worker engaged in hog raising, the fixed contract norm for raising 120 domestic-breed meat hogs in 8 months is the production of 8,070 kgs of meat--an average monthly output of 1,008 kgs of meat on the hoof. If he exceeds the monthly contract norm by 10 percent on the average (100.8 kgs), he will receive an additional salary of 8.60 dong plus a reward 0.086 [sic] dong. The salary and reward will thus total 9.46 dong; if he surpasses the contract norm by 20 percent (201.6 kgs) he will receive an additional total salary and reward of 18.92 dong. It appears that the additional wage he receives for surpassing the labor productivity norm by 20 percent is just enough to buy 0.5 kg of pork at the free market.

Another form is progressive wage payment which has a stronger stimulating effect than the normal method of wage payment according to the product. However, the progressive unitary wage paid for the product surplus to the contract norm is not more than twice the unitary wage paid for the product normally yielded in fulfillment of the contract norm. This payment method cannot yet encourage laborers in view of the present price situation. If the abovementioned hog raising worker surpasses the contract norm by 10 percent, he will receive a unitary wage multiplied by 1.5 (15.19 dong) and if he exceeds the norm by 20 percent, he will receive the double of the unitary wage stipulated in the contract--that is, 37.80 dong which is just enough to buy 1 kg of meat.

The numerous irrationalities in the labor and wage management mechanism, in general and in state agricultural enterprises, in particular, have made it impossible to provide opportunities for these enterprises to fully exploit all labor potentials to produce more wealth for the society. For example, the rate of labor productivity increase must be higher than that of wage increase; this will hold true only when wages, incomes and prices are rationally fixed throughout the society. At a time when prices are not yet stabilized, the fact that the wage paid for the overfulfillment of the contract product norm and for exceeding the plan norm is only equal to the unitary wage paid for achieving the product norm indicated in the contract and plan is quite irrational. Only when the unitary wage paid for the product surplus yielded above the contract and plan norm is higher than that paid for the product yielded in fulfillment of the plan norm will it conform to the present realities and encourage everyone to work enthusiastically.

The fact that in a country such as ours which has more than enough labor forces but lacks technical materials and machines, agricultural production is limited by the wage fund is irrational. In production, we need fully use this labor surplus to partly replace the shortage of production means and materials. We must also control the total cost of a product unit. If necessary, we must limit the number of laborers on the rolls to enable enterprise directors to adjust it accordingly.

To overcome the abovementioned shortcomings and irrationalities in the application of different methods of wage payment and reward offering and in view of the fact that the state has not yet proceeded with reforming the price and wage system, it is necessary to apply progressive forms of wage payment and to closely coordinate them with various forms of reward (reward drawn from the wage fund, reward for thriftiness in production and reward based on profit). This method will encourage laborers and will simultaneously make him responsible for the end product. Some forms of wage payment to be applied in the two sectors of crop cultivation and animal husbandry are presented below:

Wage Payment According to Product in Conjunction with the Offering of Reward for Expenditure Savings and for Overfulfillment of Product Norm.

1. In the crop cultivation sector:

Direct production expenditures and product quantity and quality must be laid down by contract. The productivity and quantity assigned by contract to teams, groups or individual laborers must be 3 to 5 percent higher than the norms assigned by the high level. Because the production cycle is lengthy, the volume of work completed each month must be used as a basis for paying provisional wages to laborers according to the basic unitary wage scale (principal wage plus allowances); this is considered as the minimum wage. Only 10 percent of the product-based wage is withheld by the enterprise. If reckonings made on completion of the harvest show that savings have beeen obtained in incurring expenditures and that the contract product norm has been fulfilled, laborers will be allowed to draw all the previously withheld 10 percent of their salary and will be awarded an amount equivalent to the expenditure savings (excluding fertilizer savings). If the product norm has been surpassed, laborers will be immediately awarded the total value of the product surplus reckoned on the basis of the encouragement price or will receive part of the surplus in kind according to each type of product (after deducting overhead expenditures, if any). The money reward will be distributed as follows: 80 percent to direct laborers, 15 percent to indirect laborers and 5 percent to the organ at the higher echelon.

2. In the animal husbandry sector.

It is necessary to assign by contract the direct expenditures and the quantity of meat on the hoof from each heard of domestic animals to teams, groups or individual laborers. Each month, it is necessary to use the volume of work done or the volume of product obtained as a basis for provisionally paying wages according to the basic unitary wage scale. The settlement of account and the reward and penalty system must be implemented as in the crop cultivation sector.

This form of payment will induce laborers to economically use material and technical supplies and to increase the productivity of both crops and domestic animals and will simultaneously associate the laborers' sense of responsibility with the end product.

Progressive Wage Payment According to Product and in Conjuction with Reward for Expenditure Savings.

In applying this form of payment, it is also necessary to fix the norms of production expenditures and the productivity and yield of crops and domestic animals in letting out work on contract to teams, groups of individual laborers.

Enterprises must consider the profit rate and the need to encourage the cultivation of each crop and the raising of each breed of domestic animal and must also firmly adhere to the relationships between the three types of benefit in order to be able to determine a progressive unit price for each category of product according to the following formula: The expenditures incurred by additional material supplies must be deducted from the value of the product surplus and the remainder will represnet the value newly created by both the laborer and the enterprise. Within the authorized limits, the enterprise director may transfer part of the profit made to the wage fund. Each month, the laborer may receive a provisional basic wage in proportion to the volume of work done or product yielded. On completion of the production cycle, if savings are found to have been made in incurring expenditures, a reward will be offered; if the laborer has overfulfilled the product norm, he will receive an additional sum of money based on the progressive unit price together with all the previously withheld 10 percent of his salary. In case the contract norm is not fulfilled, a fine not exceeding the withheld 10 percent of the wage will be imposed.

This form of payment will also encourage laborers to economically use material supplies and to increase the productivity of both crops and domestic animala and will simultaneously induce laborers to care for the end product.

While providing guidance for the experimental application of the abovementioned two forms of payment in state agricultural enterprises, it has been found that laborers and leaders in these enterprises have drawn nearly the same conclusion that, compared with the previously applied methods, these two forms of payment have had the effect of inducing laborers to work diligently, painstakingly and with a higher quality than in the past, continuously raising the value of the product yielded above the contract norm and creating conditions for laborers to increase their income, which is precisely a strong motive power to step up production.

As far as the enterprises are concerned, what is most beneficial is the existence of numerous conditions necessary for fulfilling the state plan more satisfactorily in terms of both the products in kind and their value. The enterprises will offer rewards only when laborers have fulfilled and overfulfilled the contract norms. In this respect, the role played by the policy is, without economic investments as a prerequisite, to pave the way for the development of production forces and to break up the vicious circle illustrated by the allegation that "because labor productivity is low, life is rife with difficulties: and that "because life is beset with difficulties, labor productivity is low."

What is important is that, beside the economic benefit bestowed to both the enterprises and laborers, it has been possible for enterprises to renovate their working methods, to apply technical regulations more strictly, to stengthen labor discipline, to obviously raise the sense of responsibility and the spirit of collective ownership, to save material supplies and to better preserve and maintain the common property of enterprises.

Nevertheless, shortcomings and deviations still abound in the implementation of the policy. Most of these failures have been committed in guiding the implementation. We believe that they can be overcome so that the labor and wage management mechanism is state agricultural enterprises will be gradually perfected.

KEY ROLE OF PRODUCT CONTRACTING IN COOPERATIVES DISCUSSED

Hanoi NHAN DAN in Vietnamese 9 Oct 81 p 1

[Editorial: "Product Contracting and Distribution in Cooperatives"]

[Text] The principle of distribution according to labor is applied in keeping with the tasks, degrees of development of production of each stage, and the nature of each economic unit during the transitional period. The agricultural cooperative is a socialist collective economic organization whose degree of development of production still is not high and agricultural products and commodities still are not numerous. In this situation distribution according to labor aims at ensuring income according to work days for cooperative members in accordance with the plan, relative to goods on hand (mainly grain), and at the same time at guaranteeing collective and state interest. Product contracting is a measure designed to carry out the principle of distribution according to labor, so as to implement production plans of cooperatives, to ensure that members earn an everincreasing income per workday, and to use material resources to encourage those who produce more than expected and do excellent work, rewarding them for exceeding production norms.

Product contracting promotes the application of technological progress, especially prompt introdution of new high-yield strains into production, and measures to save on work points and material expenditures, and to combat phenomena of wastes and embezzlement, hence continually increasing the real income of cooperatives. These are conditions for increasing income/workday, contribution to the state, and ensuring accumulation of savings and the general welfare for cooperatives. To do that, production plans should be tied closely to distribution plans right at the beginning of a season or a year, and contracting norms should be correctly set; economic and technological norms should be rationally adjusted; and assignment of contractual lands should fit in with the labor capability of each person. The cooperative exerts strict guidance throughout the contracting process so as to create favorable conditions for everyone to overfulfill plans.

The regime of rewards and punishments links the responsibilities of laborers and each production unit to production results. Internal economic auditing is clearly very necessary. Production units and branches fulfilling plans on ouput and cost efficiency must have earned more in terms of income/workday (in both money and grain) than those not fulfilling plans. Irrationalities affecting the income of production units and branches owing to still unrealistic contract norms, or still inaccurate labor norms and wage assessment criteria, must be promptly readjusted. Attention also should go to rational distribution of money and material resources (mainly grain) to branches and occupation in cooperatives. Individuals producing grain as well as those working in other branches and occupations also need encouragement. This distribution relationship is concretely computed on the basis of labor power input, of the real income of each branch and according to the principle of unified distribution in cooperatives.

Everywhere there are aged and feeble people lacking the strength to work. A policy of regulating grain in cooperatives is needed, so as to ensure decent living conditions for everyone, and to promote the fine tradition of helping each other among the people.

Tying product contracting closely to distribution according to labor is a process for perfecting the new management structure. By working on a trial and error basis, unceasingly raising the level of management in cooperatives, and correctly implementing the new economic policies of the party and state, we can further step up agricultural production.

EDITORIAL LINKS PRODUCT CONTRACTING TO MATERIAL-TECHNICAL BASES' DEVELOPMENT

Hanoi NHAN DAN in Vietnamese 26 Sep 81 p 1

[Editorial: "New Contracting and the Building of Material and Technical Bases in Agriculture"]

[Text] At the time the end-product contract system was extended to laborers and applied to rice cultivation, some people were afraid that the implementation of this new form of contract might break up the structure of the already built material and technical bases and would not create conditions for continuing to build new ones. Actual facts about production in areas where this system has been correctly implemented have set the worriers' minds at ease. Product contracting symbolizes cooperation and labor assignment and links the producer's responsibility to the end product. It can be carried out satisfactorily only on the basis of a rational labor organization and under the material and technical conditions essential to achieve high economic effectiveness in the labor process. So, instead of undermining material and technical bases, it requires the construction of suitable ones.

Water conservancy is the primary technical measure in agriculture. Water conservancy works are material-technical bases of primary importance. The new contract system has not in the least hindered the construction of new works in areas which are still dependent on natural sources of water. In areas which already possess water conservancy works, this system requires their perfection as well as the expansion of the irrigation and drainage network to each piece of field assigned by contract to the cooperative members--a highly significant demand of the task of perfecting the irrigation system. Linked to water conservancy projects, the new contract system promotes the filling of hollow plots and their transformation into an even terrain to expand the cultivable area. In areas where water conservancy works exist, specialized water conservancy units and irrigation teams and units must be strengthened to be able to undertake the irrigation task in cooperatives.

Implementation of the product contract system requires a close coordination between soil-preparation forces using tractors, buffaloes and cattle and those using hand tools in order to make timely and adequate soil preparations and to help cooperative members who accept to do the remaining jobs on contract. Another requirement placed on cooperatives is the need for them to draw up a plan for the use of all types of tractors and to apply the policy of associating tractor using laborers with the end product in order to make the use of the existing tractors more effective. Wherever tractors are insufficient, cooperatives must buy additional draft buffaloes and cattle and simultaneously let out animal husbandry on contract so as to increase the strength, draft power and working time of these animals. Due to the application of the policy to encourage animal husbandry, many cooperative members' families have bought additional buffaloes and cattle to increase the draft power indispensable to agriculture. A rational policy will make it possible to use the draft power of buffaloes and cattle of each household more satisfactorily to help cooperatives prepare the soil.

To properly solve the seed problem is an important technical requirement aimed at increasing land productivity and ensuring the crop cultivation pattern and agricultural seasons and schedules of cooperatives. The seed installation of each cooperative is connected with those of the district, provincial and central levels to form a four-level national seed network. Contractual cooperative members firmly rely on the state-operated seed network to assimilate scientific-technical novelties and to increase the productivity of the fields assigned to them by contract. Cooperative members are now paying more attention than ever to the rice seed network and they are willing to handle the seed problem only when the seed installation of the cooperative do not function satisfactorily.

The network of material and technical bases of cooperatives includes also green manure producing installations and insect control devices which must be strengthened under the new contract system. Under specific local circumstances, each type of material and technical bases of a cooperative must be connected with specialized units and teams in order to create conditions to associate the technical tasks undertaken by the cooperative with those done on contract by cooperative members within the framework of the eight technical measures required by riceplants.

Along with strengthening material and technical bases, cooperatives are responsible for directing their members to apply technical progress in production. If, under the new contract system, the sense of responsibility for production of each cooperative member is enhanced and closely associated with the use of material and technical bases and with the application of technical progress in production, the result will be the emergence of great motive powers to promote the development of production and the continuous consolidation of new production relationships.

SRV DISTRIBUTION-CIRCULATION MARKET REPORT

OW180954 Hanoi Domestic Service in Vietnamese 1100 GMT 14 Nov 81

[Report on distribution-circulation and market management activities in the first 10 days of November]

[Summary] So far Thai Binh has fulfilled nearly 80 percent of its annual hog procurement plan. In October alone, Ha Nam Ninh procured nearly 1,800 tons of hogs. During the first 10 months of this year, Nam Dinh Municipality's food stores sold 1,700 tons of pork. Hue Municipality, which previously had to buy additional meat from other areas for local consumption, now has sufficient locally-produced pork to meet the needs of its cadres, workers and civil servants.

Along with securing agricultural products and other foodstuffs, the localities are actively procuring marine products, salt and so forth. By the end of October, the Thuan Hai marine product sector had purchased 200 tons of sea products in excess of the plan. The sector is striving to buy an additional 1,500 tons of fish, or 50 percent above the target."

"In Ho Chi Minh City, the average rice price remains at 9 dong per kilo. The city trade sector, thanks to its procurement of a substantial amount of commodities, is expanding its local business." The city has consolidated and reorganized its market control system. It has succeeded in detecting hundreds of cases of hoarding, overpricing, smuggling and making fake goods.

"In Ha Tien City, Kien Giang Province local authorities nabbed smugglers involved in a 1,441,000 dong smuggling case. Hanoi mobile trading control units arrested smugglers of nearly 10,000 kg of flint, films, photographic paper, drugs and so forth."

"The Chau Phu tax office in Kien Giang Province through control uncovered on two trucks 1.4 million dong worth of illegally imported goods. In 10 days, authorities in Cho Gao District, Tien Giang Province detected 11 cases of concealing imported goods, including 8,000 kg of monosodium glutamate, 6,000 meters of fabric, and nearly 5,000 packs of cigarettes."

However, market management and control in some areas remains ineffective, thus allowing dishonest traders and smugglers to carry on their business.

No significant price changes were noted in the recent past, however, the above illegal trading activities call for the home trade sector and tax services to intensify their control to stamp out the negative manifestations and better improve the distribution-circulation and market management tasks.

COLD SPELL, RAINS AFFECT AGRICULTURAL PRODUCTION

BK111429 Hanoi Domestic Service in Vietnamese 0400 GMT 11 Nov 81

[Review of agricultural news for the past 10 days]

[Summary] "The northern provinces from Thuan Hai northward were affected by a cold spell in the first 10 days of November. According to the meteorological and hydrological department, this was the first time in 20 years that such a bitter cold spell came so early in the season. In many provinces, the average temperature hovered at 11-12 degrees for several days in a row. In the mountain and Bac Bo delta provinces, the cold weather also brought drizzle while fairly heavy rain was reported in the provinces in Zone 5, Central Vietnam.

"These climatic conditions have directly affected agricultural production. In the northern provinces, rain and cold have slowed down the harvesting of the 10th-month rice and the planting of various winter crops.

"According to the General Statistics Department, as of 5 November, the northern provinces and cities had harvested 447,000 hectares of 10th-month rice, or 34 percent of the total cultivated area."

Over the past 10 days, the average daily harvesting rate has been 18,000 hectares. Bringing in rice at a fairly fast pace are Son La, Thanh Hoa, Lai Chau and Hanoi. Those provinces which have harvested only a small part of their rice area are Thai Binh, Nghe Tinh, Ha Nam Ninh and Haiphong.

The recent cold winds and rain have uprooted part of the rice crop which headed in October. According to the General Statistics Department, this may cause a drop in rice yields. The cold spell, however, has helped reduce the area of rice affected by harmful insects, especially army worm.

"Rain and cold have also affected the caring for and planting of winter crops. As of 5 November, the northern provinces and cities had planted only 155,000 hectares of vegetables, subsidiary food crops and industrial crops, down 10,000 hectares compared with the same period last year. The planting of all winter crops has fallen short of the norms, with the sweet potato area representing only 57.2 percent of the target; the corn area, 34.4 percent; the potato area, 17.1 percent; the vegetables area, 40.6 percent; and the soybean area, 57.4 percent."

Over the past 10 days, various southern localities have also begun to harvest the early 10th-month rice. Quang Nam-Danang has brought in 23,000 hectares and Nghia Binh, 16,000 hectares. Leafhoppers have appeared in some southern provinces such as Thuan Hai and Ben Tre. The southern localities are now concentrating on combating harmful insects, caring for the late 10th-month rice and harvesting the 10th-month rice which has ripened while beginning the planting of the 5th-month spring crop.

"During the first 10 days of November, all localities have also actively begun to implement their 5th-month spring production plans. A review of the tasks already accomplished has shown that some work has been done better than last year while other has been done worse. According to the General Statistics Department, the northern provinces have grown nearly 19,000 hectares of rice seedlings, an increase of 6,000 hectares over the same period last year. The area of 5th-month cropland already plowed dry totals 135,600 hectares, nearly double the area plowed in the same period last year. On the contrary, the amount of organic fertilizers prepared and duckweed planted for the 5th-month spring season has gone down compared with the corresponding period last year. Specifically, the output of organic fertilizers has decreased by 500,000 tons while only about 1,000 hectares of duckweed have been planted, compared with 3,500 hectares grown in the same period last year."

According to the meteorological and hydrological department's forecast, the weather will become increasingly warmer in the next 10 days. These climatic conditions will be favorable for the northern localities to concentrate on harvesting the 10th-month rice and for all localities to step up the planting of winter crops, especially potatoes, vegetables and leguminous plants.

Aside from harvesting the 10th-month rice and planting the winter crops, in the coming days all localities should concentrate on growing duckweed, producing organic fertilizers for the 5th-month spring crops, and protecting rice seedlings and cattle, hogs and other domestic animals from cold weather.

WIDESPREAD ILLEGAL USE OF COOPERATIVE RESERVED LAND REPORTED

Hanoi NHAN DAN in Vietnamese 6 Oct 81 p 3

[Article by Nguyen Khai, Land Management General Department: "Using Land Contrary to Policy"]

[Text] Regulations on agricultural cooperatives earmark 5 percent of the cooperative-owned land for members' families for planting vegetables, subsidiary food crops and grain crops, but not for other purposes. The regulations stipulate that members must return the land which they no longer need, to the cooperatives, and can have it restored whenever they need it again. Nevertheless, at the present time, use of reserved land is very arbitrary in many localities; worse still, some people even see it as family property which can be disposed of at will. Phenomena of digging ponds, land encroachment, taking clay to make bricks on reserved land, and buying, reselling, exchanging, etc., reserved land are fairly serious developments. In Dong Anh village (An Hai, Haiphong), 64 instances of digging ponds and land encroachment involved 15,000 square meters of reserved land. In Vinh Niem village 7,5000 square meters were involved. Also in Vinh Niem, a family built a house on the reserved land, later sold both house and land and applied with the cooperative for another land allotment; on grounds of encountering difficulties, another family has been allowed by the administration to sell its 5 percent-plot! In Bai An hamlet, Nghia Do village (Tu Liem, Hanoi), following transfer of a number of agricultural households to other jobs, some people sold the reserved land and pocketed the money, while others more cunning, took clay to make bricks! A number of other localities are in the same situation as well.

If the above situation is not thwarted in time, the 5 percent-land belonging to cooperative members now being devoted to production, will be turned into residential land, fish ponds, or used for personal profit. It is suggested that administration echelons strengthen land control and inspection to promptly discover violations and to mete out punishment commensurate with degrees of gravity, such as levying fines, enjoining violators to make reparative measures and compensate for damages caused by them, taking back the land or bringing violators to court, pursuant to Decision 201 CP of 1 July 1980 of the Council of Ministers on unifying land management and strengthening land management work.

DONG THAP FULFILLS 1981 GRAIN COLLECTION PLAN

BK101036 Hanoi Domestic Service in Vietnamese 0400 GMT 10 Nov 81

[Text] On 9 November, the chairman of the Council of Ministers sent a message to commend the people and cadres of Dong Thap Province for having fulfilled 100.8 percent of their 1981 grain collectionplan norm as of 30 October. The fulfillment rates by district are as follows: 115.7 percent by Hong Ngu, 125 percent by Tam Nong and 100.83 percent by Thap Muoi.

The province is striving to collect completely all agricultural taxes and debts in order to further increase the grain collection norm and score achievements to greet the fifth party congress. The chairman of the Council of Ministers warmly commends the people and cadres of Dong Thap Province and the above districts for their 1981 achievements in production and grain collection which have contributed positively to securing the general balance of state grain distribution and to meeting the requirements of production, combat and life in the current situation.

He hopes that the cadres and people of Dong Thap Province will develop their achievements, strive to care for, protect and harvest the 1981 10th-month crop satisfactorily and, at the same time, cultivate the 1981-82 winter-spring crop on schedule, ensuring the fulfillment and overfulfillment of the plan norms for both area and yield and production volume. Moreover, they should make good preparations for implementing successfully the grain collection plan for the 1981 10th-month crop and the 1981-82 winter-spring crop in accordance with political bureau directive No 120-CTTU dated 21 October 1981.

TRADE MINISTRY DISCUSSES AGRICULTURAL COLLECTION

BK110855 Hanoi Domestic Service in Vietnamese 2300 GMT 10 Nov 81

[Text] The Ministry of Home Trade has recently met with representatives from the nine Mekong River Delta provinces and Ho Chi Minh City to discuss measures aimed at stepping up the collection of agricultural products in the last months of 1981.

During the meeting, the Mekong River Delta provinces and Ho Chi Minh City recommended close coordination with centrally-run trade corporations and more satisfactory efforts to collect and control agricultural products through various economic, educational, managerial and administrative measures with the economic measures as the linchpin.

They also called on the trade sector in all provinces to reorganize their purchase and sales networks, especially those dealing in key commodities such as industrial goods, agricultural products, construction materials and fuel, and to broaden the operations of local marketing cooperatives, thereby creating the proper conditions for the people to buy and sell goods directly to the state and gradually driving out private merchants from the agricultural products and materials market.

The Ministry of Home Trade also discussed with the nine Mekong River Delta provinces and Ho Chi Minh City various organizational measures designed to effectively distribute industrial goods for the benefit of cadres, workers and civil servants.

AGRICULTURE MINISTRY ON ADJUSTING CONTRACT NORMS

BK171335 Hanoi Domestic Service in Vietnamese 2300 GMT 16 Nov 81

[Text] The Ministry of Agriculture has recently issued a circular providing guidance for the distribution of income in the 10th-month season within those cooperatives which apply product contracts with laborers.

Owing to the fact that, in this year's 10th-month season, the rice crop was seriously damaged in many places by leafhoppers and that collectives were unable to fully meet cooperative members' demands for supplies according to contracts, those localities facing difficulties in production work should adjust contract norms to suit the actual situation.

Providing guidance in this matter, the circular pointed out: Contracted volumes of production should be reconsidered and adjusted according to the amount of supplies and technical means at the disposal of each cooperative as well as its real productive capability. Such adjustments should not be carried out indiscriminately; they should be practiced only in those localities suffering losses caused by objective factors and natural calamities. Cooperatives should actually consider the requirements of production work so as to adjust the limits of expenses and supply consumption and work points to a more adequate level.

In addition to providing guidance in the adjustment of contract norms, the Ministry of Agriculture also spelled out fairly concrete guidelines for the application of necessary measures to improve the distribution of income in the current 10th-month season. These measures included evaluating the results of production, reviewing economic and technical norms, and ensuring a rational distribution of income among production units and specialized services in cooperatives.

CSO: 4209/85

PRIVATE SWINE HERD INCREASES IN HANOI, THAI BINH

Hanoi NHAN DAN in Vietnamese 28 Sep 81 p 2

[Text] VNA--Under the action of the agricultural product contract system, since the beginning of 1981 the total swine herd raised by private households in Hanoi has steadily increased and now numbers almost 364,000--an increase of 8.4 percent over the same period last year.

The Hanoi rural districts have intensified leadership and assisted production installations in properly managing and using land and feedstuffs and in taking timely measures to prevent and control epizootics. In areas where product contracts have been signed with laborers, cooperative members have actively sought capital, breeds and feedstuffs to develop animal husbandry without relying on and waiting for the cooperatives' help as in the past. Within only a short period of time, thousands more of cooperative members' households in the districts of Hoai Duc, Thach That and Soc Son have started raising hogs with the result that the private hog herd in each district has increased by more than 2,000 heads on the average. However, animal husbandry has been improperly guided in many areas, which has led to an irrational disproportion between the collective animal husbandry and the livestock raising by cooperative members' households. Of all the cooperatives in Me Linh District that carried out collective animal husbandry in the past, only two remain and the situation is similar in many other districts. In Gia Lam District, there remain only 12 out of 31 cooperatives which carried out collective animal husbandry in the past. At present, the collective hog herd in Hanoi numbers only more than 24,000--20 percent down compared with the same period last year.

To eliminate the abovementioned imbalance, the Municipal Agricultural Service has led pilot installations to draw experiences in coordinating private and collective animal husbandry and letting out work on contract under the new circumstances in order to deliver the fixed number of animals and the fixed quantity of product to the state. The Agricultural Service has chosen Lien Ha and Nam Hong cooperatives (Dong Anh) as two pilot units for common guidance because they have proportionally and rationally developed animal husbandry in both the private and collective sectors and also by letting out animal husbandry on contract and because they have fulfilled their obligations to the state satisfactorily and promptly.

To date, there are in Thai Binh 245,500 hog raising households representing a 4.6-percent increase over the same period last year and including 11,800 families who raise 3 hogs or more each. By the end of August 1981, the private herd numbers 330,000 hogs representing an increase of nearly 10 percent compared with 1 April 1981 and, for Thai Binh City alone, an increase of 38 percent.

Due to difficulties concerning feedstuffs and breeding hogs in the first 6 months of this year, the swine herd in both the collective and household sectors decreased by 12 percent as compared with the first 6 months of last year. To overcome this situation, the provincial agricultural sector in conjunction with the Women's Union and mass organizations has motivated peasants to help each other raise hogs and has also supplied additional capital, breeding hogs and so forth to households faced with difficulties.

The city and districts in the province have drawn up plans to properly manage 13 percent of the grain output to be reserved for animal husbandry in order to keep up and develop the collective hog herd. The Women's Union at various echelons has motivated its members to help each other in matters of breeding hogs, capital and hog raising experiences to enable every member's family to raise hogs.

The districts of Hung Ha, Vu Thu and Dong Hung have applied the system of product contract with laborers in rice cultivation since the fifth-month and spring season [of this year] and have actively exploited sources of feedstuffs to raise hogs. As a result, in the two months of July and August 1981, the household sector raised 5,000 to 8,000 more hogs representing an increase of between 0.5 and 16 percent over the same period last year.

Nevertheless, the private animal husbandry movement is not yet even among all districts. In many cooperatives such as the Tien Hai, Thai Binh and Kien Xuong ones, from 31 to 40 percent of the total number of housholds have not yet started raising hogs.

AGRICULTURE

BRIEFS

HAI HUNG WINTER CROPS--Hai Hung Province to date has planted more than 26,000 ha of winter subsidiary crops, achieving almost 40 percent of the plan norms. The pace of planting soybean is rather quick and so far 75 percent of the plan norm has been achieved. The planting of corn and sweet potato was slower due to the shortage of seeds. Along with caring for these subsidiary crops, the province is making preparations for a better yield of the 5th-month spring rice crop. [BK041031 Hanoi Domestic Service in Vietnamese 0400 GMT 4 Nov 81]

QUANG NAM-DANANG FLOODS--Heavy downpours in Quang Nam-Danang recently has caused flash floods in many areas, thus causing difficulties for the harvest of summer-fall rice and the planting of winter-spring rice. The province's food sector has moved thousands of tons of grain from low-lying areas to higher ground. The trade sector has reserved a large quantity of consumer goods for supply to the people during the rainy season while the water conservancy sector is making preparations to serve the winter-spring crop. [BK041031 Hanoi Domestic Service in Vietnamese 0400 GMT 3 Nov 81]

HO CHI MINH CITY AGRICULTURE--Ho Chi Minh City recently held a congress to review the results of the 1976-80 socialist emulation movement to learn from and multiply progressive models in agriculture. Over the past 5 years, the city has opened more than 30,000 hectares of virgin land, thus expanding its cultivated land to 85,000 hectares in 1981. In addition, the city has set up 21 state farms, 10 agricultural cooperatives and more than 350 production collectives. [Hanoi Domestic Service in Vietnamese 0400 GMT 8 Nov 81 BK]

HAIPHONG RUSH PRODUCTION--In 1981, Haiphong City has planted only 1,024 hectares and harvested more than 3,000 tons of rush, a decrease of 500 hectares and 1,700 tons compared to 1978. This is due mainly to the failure of various districts to direct rush planting in accordance with plans. [Hanoi Domestic Service in Vietnamese 1430 GMT 7 Nov 81 BK]

CUU LONG WINTER-SPRING RICE--Cuu Long Province is expected to plant more than 170,000 hectares of rice in this winter-spring crop season. The province has supplied various districts with 338,000 liters of gasoline and 1,178,000 liters of diesel oil to help them carry out soil preparation for the cultivation of this rice. [Hanoi Domestic Service in Vietnamese 1430 GMT 6 Nov 81 BK]

BAC THAI WATER CONSERVANCY--Bac Thai Province is striving to accelerate the construction of various water conservancy projects to ensure sufficient water for 23,500 hectares of 5th month-spring rice and thousands of hectares of subsidiary and industrial crops. To achieve this objective, the province has launched a 60-day drive to complete and put various irrigation networks and reservoirs into use. [BK051113 Hanoi Domestic Service in Vietnamese 2300 GMT 4 Nov 81]

VINH PHU RICE--Vinh Phu Province has reaped the 10th-month rice on more than 16,000 ha, covering 25 percent of the cultivated area. Vinh Lac, Lap Thach and Vinh Yen districts and Phu Tho city have harvested the rice crop on 30 to 58 percent of their respective cultivated areas. HEAVY INDUSTRY AND CONSTRUCTION

BRIEFS

POWER SUPPLY--The Uong Bi powerplant recently held a ceremony to receive President Ton Duc Thang rotating banner conferred on it for its great achievements in power production, work performance and organization of the people's lives for the third quarter. On this occasion the powerplant's cadres, workers and civil servants signed an emulation agreement with the Soviet experts working at the plant for the production of 110 million kwh in the remaining months of the year so as to meet this year's annual production target of 610 million kwh. On the same occasion the power ministry awarded commendation certificates to four Soviet experts for their great contributions to the Uong Bi powerplant's great achievements in power production. BRIEFS

INDUSTRIAL DEVELOPMENT IN SOUTH--Hanoi, 15 Nov (VNA)--A major province in the Mekong River Delta, Hau Giang not only holds an important position in agriculture but also has a great potential for the development of industry and handicrafts. With some 500,000 hectares of cultivated land, Hau Giang has built thousands of rice mills. Its sea coast of more than 70 kilometres enables it to get thousands of tonnes of sea produce for export. Zones have been set up for subsidiary crops, perennial industrial crops, and fruit trees. In Can Tho, the provincial city, and a number of districts, more than 4,000 hectares have been put under soybean. The area is expected to double or treble in the years to come. Sugarcane is planted almost everywhere. Every year coconut plantations can supply more than 10 million nuts to the soap industry. The province has made exchanges with Ho Chi Minh City and other provinces for materials. In 1980, the province's incomes in industry and handicrafts were 3.5 times more than in 1976. In the first 6 months of this year, it grossed 52.7 million dong. [OW160167 Hanoi VNA in English 1510 GMT 15 Nov 81]

INEFFECTIVE DELIVERY OF GOODS TO OWNERS BY HAIPHONG PORT

Hanoi NHAN DAN in Vietnamese 26 Sep 81 p 2

[Article by Nguyen Cong Hoan, of the Ministry of Foreign Trade: "Haiphong Port Shrinks from Cargo Delivery Difficulties"]

[Text] The shipping of goods placed in containers makes transportation very convenient and enables ports to rapidly unload cargoes from ships. However, if the goods put in a single container belong to many owners, the latter will encounter difficulties in taking delivery of these commodities.

Haiphong Port recently received a fairly large number of containers. As of 29 May 1981, there remained more than 600 containers (including empty ones) which occupied large storage fields. When the owners came to receive their goods, the warehouse keeping cadre did not take any measure to deliver them. Many owners were thus obliged to wait and to go back and forth many times. At 0730 on 31 July 1981, we and the foreign specialists called at warehouse No 12 to receive 5 parcels of commodities weighing 310 kgs and placed together with other goods in a container having a capacity of 20 tons. Our parcels had been brought to the port by a ship since November 1980, but the personnel at warehouse No 12 refused to deliver the goods to us. Therefore, we called upon a comrade named Cong, deputy chief of pier No 2, and asked him to solve this problem but he refused under the pretext that not all of the goods owners were present there to witness the breaking off of lead seals and to inspect the parcels in the container. Cong also requested that all expenses be paid immediately. We pointed out to him that since the goods in the container belonged to different foreign trade general corporations and also to private individuals, the most correct way is for the port to invite responsible organs to come to inspect the goods and that each owner should pay expenses according to the quantity of his goods. Payment should be made according to the procedures indicated in the contract signed between the goods owners and the port. But Cong still refused to listen to us. Using their own cars, the specialists took us to another comrade named Ba, deputy director of the port, and asked him to solve this problem. Ba gave us a handwritten letter requesting Cong to deliver the goods but the latter refused once again (!) We immediately returned to see Ba again and he introduced us to Port Director Cuong. After hearing our explanations, Cuong gave us a handwritten letter requesting Ba to try and deliver the goods at all costs. This time Ba had to accompany us to see Cong who finally asked warehouse No 12 to solve the problem.

However, we could not yet receive the goods because the cargo was stocked at a high level and because our five parcels were put at the other end of the container. Pier No 2 had no equipment available but when a crane was put at its disposal, workers said it was out of order. After using cranes to take out the parcels, stevedores complained about difficulties and refused to work. Because the project we were working for badly needed these goods, the specialists and we had to sort out the goods ourselves and to work the evening shift before taking our five parcels.

It is requested that Haiphong Port urgently reorganizes the delivery and reception of goods put in containers because the many suggestions made by goods owners have not yet been given consideration. It is also necessary for the port to criticize and immediately correct the wrong working method of cadres and workers at pier No 2.

ROLE OF TRADITIONAL MEDICINE BOOSTED

Hanoi NHAN DAN in Vietnamese 8 Oct 81 p 1

[Article: "Party Central Committee Secretariat Issues Directive on Organization and Tasks of Vietnam Association of National Medicine"]

[Text] On 30 September, the Party Central Committee Secretariat issued a directive on consolidating the organization and strengthening the work of the Vietnam Association of Traditional National Medicine in the present juncture.

The Secretariat has decided:

To change the name of the Vietnam Association of Oriental Medicine to that of Vietnam Association of Traditional National Medicine [Hoi Y Hoc Co Truyen Dan Toc VN] or Vietnam Association of National Medicine [Hoi Y Hoc Dan Toc VN] for short.

The association includes those who really do bona fide professional work in traditional medicine and pharmacy. The Vietnam Association of National Medicine must properly carry out the following tasks:

a. Mobilize, assemble, educate and unite those practicing the professions of traditional medicine and pharmacy, and urge all of them to strive to contribute talents and experiences to preventing and treating diseases for the people.

b. Along with the public health sector to properly organize the training, the improvement and increase in number of cadres and physicians; to acquire and develop the nation's traditional medicine, especially by discovering and recruiting skilled physicians as well as individuals who inherited traditional medicinal formulas from their ancestors; and to voluntarily pass on their knowledge to young physicians and their own offspring.

c. Along with the public health sector strengthen unity between professionals of traditional and modern medicines and pharmacology and to raise the spirit of cooperation and sense of socialist ownership so as to jointly care for the people's health.

d. Along with the public health sector to propose necessary policies and procedures to party and state organs aiming at causing favorable conditions for developing the work of traditional medicine and pharmacology.

Owing to the still different political, economic and social situations between north and south, in the immediate future the Vietnam Association of National Medicine will be organized as follows:

At the central level, we should continue to perfect the Central Committee of the Association to enable it to direct the association nationwide.

In the localities, there will be three echelons: executive committee in provinces and cities; district, precinct and town committees; and committees at the primary level of villages, wards, etc. A chapter should be set up where there are 10 or more association members, and a cell should be set up where there are fewer than 10 members.

In the south initially establish provincial and municipal provisional executive committees of the association. Provincial and municipal committees must closely coordinate with local public health services to devise plans for investigating and controlling traditional physicians in provinces and municipalities; enrolling and utilizing skilled and good traditional physicians in the common public health network; and on that basis, gradually organizing the association in districts, precincts and cities and at the village and ward level. In the immediate future, form chapters in places where traditional national medicine forces are relatively strong, and ensure party and state leadership over the association's activities. The Association Central Committee must have plans for strictly directing and ensuring that the association be organized on a solid foundation, and not in a widespread but superficial manner.

The Secretariat reminds the public health sector and the Vietnam Association of National Medicine at all levels of the need to cooperate closely and to unite in the spirit of mutual help so as to carry out properly the acquisition, promotion and development of traditional national medicine hand in glove with modern medicine.

The Central Committee of the Vietnam Association of National Medicine needs proper plans for preparing and convening a nationwide congress of the association to devise guidelines for the association's activities in keeping with the new situation, tasks and requirements, to issue the decision to change the association's name, and to elect a new central committee capable of directing the realization of the tasks of the association at all levels.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

THE VICTORIOUS PEOPLE'S CONSTITUTION

BK241300 Hanoi TAP CHI CONG SAN in Vietnamese No 9, Sep 81 pp 1-6

[Article by Truong Chinh, member of the Party Central Committee Political Bureau and Chairman of the Council of State--translation previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 207, 27 Oct 81 pp K5-K9. Capitalized passages published in italics]

[Text] This year is an exceptional year for the people's lives in Vietnam. The country has entered this exceptional year with a constitution which notes the many political and social achievements scored by the laboring people in their socialist construction. A National Assembly of the SRV has been elected in accordance with new fundamental rules. The National Assembly has adopted several laws which substantiate various articles of the Constitution and ensure practical enforcement of these articles. The new Constitution now in force has become a stabilizing element of life in Vietnamese society and a catalyst for social development along the socialist path.

The Vietnamese National Assembly unanimously approved the Constitution of the SRV on 18 December 1980. Inheriting from and bringing into full play the 1946 and 1959 Constitutions of the Democratic Republic of Vietnam, the present Constitution of the SRV is the one for the period of transition to socialism on a national scale. It recapitulates and verifies the fruitful achievements scored by the Vietnamese people in their revolutionary struggle over the past half a century. It reflects the Vietnamese people's determination and aspirations and ensures the glorious development of Vietnamese society in the period ahead. The Constitution stipulates the political, economic, cultural and social system for the SRV, the basic rights and duties of Vietnamese citizens, and the organizational structure and working principles for various state organs.

The following are some specific features of the new Constitution of Vietnam:

It is the revolutionary goal of the working class to abolish the system of the exploitation of man by man, to do away with all forms of class and race oppression, and to build a society of equality, freedom and happiness, that is a communist society. These are points that many Marxist-Leninist theoreticians have emphasized.

Only if the working class wins power, seizes state power and becomes a class leading the entire society will we be able to carry out the socialist transformation of the national economy, build socialism and advance toward communism.

"The SRV is a state of proletarian dictatorship." (Footnote: The SRV Constitution, Article 2.)

Victorious in its revolutionary struggle, the Vietnamese working class has liberated all Vietnamese laboring people from oppression and exploitation. As a result, the Vietnamese state of proletarian dictatorship represents the fundamental and long-range interests of the entire Vietnamese nation, and in Vietnam the administration is of the people, by the people and for the people. Dictatorship of the proletariat does not mean that only the working class rules. The worker-peasant alliance is the basis of proletarian dictatorship. In Vietnam the working class, peasantry (collectivized and individual peasants), socialist intelligentsia and all other strata of the laboring people may elect delegates to the National Assembly and the people's councils at all levels.

"In the SRV, all power belongs to the people. The people exercise state power through the National Assembly and the people's council at all levels, elected by the people and responsible to the people." (Footnote: The SRV Constitution, Article 6.)

We do not think that dictatorship of the proletariat and the laboring people's collective mastery contradict each other. The more intensively we strengthen the dictatorship of the proletariat, the more extensively we must develop the laboring people's collective mastery. By so doing, we can resolutely suppress the counterrevolutionaries and all antisocialist forces while developing socialist democracy and avoiding bureaucracy and despotism.

The Fourth VCP National Congress delegates in 1976 mentioned the relations between the party, the people and the state. These relations have now been institutionalized in the new Constitution.

With respect to the leadership role of the VCP, the new Constitution clearly states: "The VCP -- the vanguard unit and militant staff of the Vietnamese working class -- is armed with Marxism-Leninism. It is the sole force to lead the state and society and is the main decisive factor in all victories of the Vietnamese revolution."

With regard to the laboring people's role in the country's political life, the Constitution stipulates: "In the SRV, the collective masters are the laboring people, including the working class, the collective peasantry, the socialist intelligentsia and other working people, with the worker-peasant alliance, which is led by the working class, as the backbone." (Footnote: The SRV Constitution, Article 3.)

The laboring people master society mainly through the state and exercise their rights through the National Assembly -- the highest institution of state power -- and through the people's councils at all levels -- the local institutions of state power. The laboring people also exercise their collective mastery through such mass and social organizations as the trade union, the youth union and the women's union, and other member organizations of the Vietnam Fatherland Front. The laboring people further directly master factories, cooperatives, their armed forces units and residential quarters, and so on, and participate in state and social affairs in those very installations and localities.

With respect to state management, the Constitution as a whole denotes the heavy responsibility of the state for economic and social management. The state is responsible to the people for comprehensively administering the country in the political, economic, cultural, social and national defense fields, and so forth. The government is responsible to the people for organizing and guiding the implementation of state plans, for organizing and guiding the people's economic and cultural lives, for organizing national defense, for ensuring social order and security, and for ensuring the observance of all of the citizens' fundamental rights and duties.

The above three issues (the party leadership, the people's mastery and the state management) are closely correlated and this is the main scope of Vietnam's SOCIALIST DEMOCRACY in the present stage.

For a better understanding of the conditions in which Vietnam's Constitution was promulgated, we should look back over a short period of history.

Under the French colonialist regime, Vietnam was divided into three parts called Tonkin, Central Vietnam and Cochinchina. These three parts together with Laos and Kampuchea formed "Indochina dominated by France" or "Eastern France." Vietnam was completely wiped off the world map.

The victorious August revolution unified Vietnam after nearly a century of division. The French colonialists once again returned to invade Vietnam. Vietnam was then divided into two zones: the French-occupied military zone and the free zone.

Following the great Dien Bien Phu victory, Vietnam was again partitioned into two regions with two different political regimes: the Democratic Republic of Vietnam in the north with the people's democratic regime and the Republic of Vietnam in the south with the neocolonialist regime of U.S. imperialism and its puppet administration. Faced with such a situation, led by the Communist Party, the Vietnamese people, while directing the north along the socialist path, carried on the People's National Democratic Revolution in the south and finally liberated that part of the country from the rule of the U.S. imperialists and their henchmen.

Following the liberation of Saigon in 1975, a people's revolutionary administration was established for all areas throughout the south, and Vietnam achieved national unification on the basis of national independence and socialism. A problem facing the Vietnam Communist Party at that time was the achievement of national unification politically, administratively, economically, culturally and socially. Therefore, the party had to strive resolutely to eradicate the puppet army and administration and to do away with all forms of economic activities and all cultural vestiges left by neocolonialism in the south. It also had to quickly put the south on the path of socialist revolution alongside the north, trying to effect the socialist transformation and build the material and technical bases of socialism in the south.

The economic situation in Vietnam at present is still diversified. In the north, the pursuit of socialism has achieved some initial successes. The socialist economic sector (including the state- and collective-run economic sectors) has accounted for 88.4 percent of gross national product and 84.1 percent of gross national income. The rest is made up by peasants' small-scale individual contributions. The private capitalist-run economic sector has undergone a complete transformation. The south, however, has taken only initial steps along the path toward socialism.

The tasks facing the Vietnamese revolution following the liberation of the south (30 April 1975) consisted of carrying on socialist construction and perfecting the socialist transformation in the north while carrying out the socialist revolution in the south. Thus, despite differences in the extent of socialist transformation and construction, in reality, since the liberation of the south, both the north and the south have been in the period of the transition to socialism. The Constitution of the SRV is a sharp weapon of the Vietnamese people in their struggle to build socialism successfully on a national scale.

In order to score clear-cut successes, Vietnam as a whole must carry out the three revolutions simultaneously -- namely, the revolution in production relations, the scientific and technical revolution and the ideological and cultural revolution. These are THE ESSENTIAL GOALS OF THE SOCIALIST REVOLUTION in Vietnam at present. A new mode of socialist production has come into existence and has developed throughout the country. Socialist thinking has been in full bloom and is increasingly gaining absolute supremacy over the people's spiritual life.

Experience gained by the Vietnamese people over the past many thousand years shows that national construction must always be carried out in combination with national defense. Since the founding of the Democratic Republic of Vietnam and then the birth of the Socialist Republic of Vietnam, the Vietnamese people have been compelled to fight fiercely against imperialism. Four wars broke out one after another: two wars for national liberation against French and U.S. imperialists, and two wars of national defense against the genocidal Pol Pot-Ieng Sary clique and the Beijing expansionists and hegemonists.

At present, defending Vietnam is to defend a firm outpost of socialism in Southeast Asia against bellicose imperialism headed by U.S. imperialism and against the Chinese expansionists and hegemonists who have always threatened to invade us and use Vietnam as a springboard from which to achieve annexation of all of Southeast Asia. While fighting for the survival of their nation, the Vietnamese people have simultaneously fulfilled their international obligations to world peace and revolution. Not only have they protected their independence, sovereignty and territorial integrity but they have also contributed to developing and strengthening the world socialist system and to promoting the complete disintegration of the colonial system of imperialism. In Vietnam THE CLOSE COMBINATION OF SOCIALIST CONSTRUCTION WITH THE DEFENSE OF THE SOCIALIST FATHERLAND is based on this historic and political reality.

The SRV Constitution stipulates: "The SRV builds a comprehensive, modern and all-people national defense on the basis of combining national construction with national defense, combining the strength of the people's armed forces with the strength of all the people and combining the nation's traditional strength against foreign aggression with the strength of the socialist system." (Footnote: The SRV Constitution, Article 49.)

As a matter of fact, the SRV state has to carefully build socialism, constantly develop the economy and culture and improve the people's material and spiritual lives, while consolidating national defense, developing the three categories of troops of the people's armed forces -- regular, regional and self-defense militia forces -- opposing the imperialist aggressors and the Chinese expansionists and big-nation hegemonists, eradicating internal rebels, protecting the country's independence, sovereignty and territorial integrity and assuring order and security.

According to the new Constitution, all citizens enjoy ample rights in the political, economic, cultural and social fields and in their public and family lives. All manual and intellectual workers, male and famale, old and young, teenagers, children, wounded, fallen heroes' survivors, revolutionary individuals and families, the infirm and needy and orphans have found in the new Constitution all the basic rights and privileges which the socialist state has given them.

Apart from rights, the Constitution stipulates citizens' fundamental duties, primarily the duties of being loyal to and defending the fatherland, of laboring, of observing the Constitution, law and other regulations of public life and of respecting and protecting socialist assets.

The SRV Constitution's stipulations concerning the fundamental rights and duties of citizens reflect the concept of settling the relationship between the society and individuals according to the principle of "harmoniously combining the demands of social life with the genuine freedom of individuals, and of guaranteeing the unanimity of interests between the state, collectives and individuals on the principle of one for all and all for one." (Footnote: The SRV Constitution, Article 53.)

The spirit of this relationship which we must thoroughly understand is that CITIZENS' RIGHTS ARE NOT SEPARATE FROM THEIR DUTIES. If citizens enjoy their rights, they must fulfill their obligations. Conversely, if they fulfill their duties, their rights will be guaranteed by the state.

During the transition period, the class struggle -- the struggle between progress and backwardness -- is still fierce and complicated. To prevent the abuse of citizens' rights and infringements on the interests of the state and people, the Constitution specifies: "No one has the right to take advantage of democratic freedoms to violate the interests of the state and the people." (Footnote: The SRV Constitution, Article 53.)

We consider raising the standards of the people's material and cultural living to be one of the conditions for forming new men and for ensuring the balanced and comprehensive development of each person.

The Constitution guarantees for citizens a life materially ever more plentiful, spiritually rich and qualitatively noble and beautiful. This life is completely different from what the capitalist sociologists and philosophers usually describe in their propaganda as the "consumer society."

The SRV Constitution reflects the Vietnamese people's ARDENT PATRIOTISM and their solidarity against foreign aggression through various stages of the national history. The Constitution stresses: "The state develops the people's patriotism and revolutionary heroism." The sacred duties of all citizens are to be loyal to and defend the country. "To betray the country is the most serious crime against one's nation."

Moreover, the Constitution reflects the PROLETARIAN INTERNATIONALISM, the correct foreign policy and the noble international obligations of the Vietnamese people.

The SRV Constitution clearly states: "The SRV intensifies its fraternal friendship, militant solidarity and comprehensive cooperation with the Soviet Union, Laos and Kampuchea and other socialist countries on the basis of Marxism-Leninism and proletarian internationalism. It protects and defends its friendship with neighboring countries, maintains solidarity with the peoples of countries struggling for national independence and social progress, implements the policy of peaceful coexistence between countries with different political and social systems on the basis of respect for each other's independence and sovereignty, nonintervention in each other's internal affairs, equality and mutual benefit; it actively supports and contributes to the struggle of the world's people against imperialism, colonialism and neocolonialism, big-power hegemonist expansionism and racism and for peace, national independence, democracy and socialism."

These clear-cut stipulations of the SRV state's foreign policy attest to the groundless slanders and distortions by the reactionaries among the Chinese ruling circles about what is described as "Vietnam's small hegemony" as well as the Vietnam-controlled "Indochinese federation."

to make the Constitution a reality in social life, we must implement many important tasks. The state must materialize the new Constitution by enacting necessary laws to implement the Constitution. The cadres and people must be made fully aware of all the provisions of the Constitution so that all citizens implement it voluntarily. The struggle to implement the Constitution is a thousand times more difficult than the formulation of the Constitution. Nevertheless, since the provisions of the MRV Constitution agree with the developmental law of our society and respond to the interests and the profound aspirations of the Vietnamese people, we are convinced that our Constitution will certainly be implemented despite difficulties and complications. With the implementation of the new Constitution, the Vientamese people will enjoy more freedom and happiness and will successfully build a peaceful, independent, unified and socialist Vietnam.

ORGANIZE THE PARTY ORGANIZATION WELL AT ALL ECHELONS

BK280930 Hanoi TAP CHI CONG SAN No 9, Sep 81 pp 7-10, 59

[Unattributed article--translation previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 209, 29 Oct 81, pp K7-K10]

[Text] Implementing the resolution of the ninth plenum of the VCP Central Committee on convening the fifth national party congress of delegates, our party is now urgently and actively making preparations in all fields to advance to the party congress.

For local and grassroots party organizations, an extremely important task they must carry out, if they are to practically contribute to preparing for the national party congress, is to satisfactorily hold congresses of party organizations at their own levels and to select worthy delegates to congresses of party organizations at higher levels or to the national party congress.

First of all, we must understand what is required of the fifth national party congress. On this basis, we will determine a direction for our thinking and preparations so as to ensure the best possible results for the congresses of party organizations at all levels.

The fifth party congress is being convened in a situation in which our entire party, people and armed forces have made every effort to implement the resolution of the fourth party congress, have fought valiantly, worked diligently, overcome many difficulties and trials and achieved great successes in many fields.

Aside from the outstanding achievements in defeating the two wars of aggression started by the reactionary Chinese leadership, continuing to fulfill our international obligations to fraternal Laos and Kampuchea, and especially in supporting the Kampuchean people's cause of national salvation and helping it achieve total victory, we have also scored great achievements in socialist transformation and building socialism. A stable system of dictatorship of the proletariat has been established throughout the country. The working people's collective mastery has been initially established. We have quickly overcome the heavy losses caused by the U.S. and Beijing expansionist wars of aggression and promptly resolved numerous pressing socioeconomic problems. The material and technical base of the economy has been significantly strengthened. In agriculture as well as in industry, despite the many difficulties encountered, production has made headway and developed in some respects. In culture, education and public health, important developments have been achieved, reflecting the superiority of the new system. In the labor productivity movement, positive factors and progressive models have recently brought practical results in many places and promise even better ones in the future. In foreign relations, we have scored strategic achievements in strengthening the militant solidarity between our people and other fraternal peoples in the socialist community.

However, our achievements in socialist revolution, especially in the economic field, have been small compared with our needs and with the efforts and resources committed. As the party central committee letter to all party committee echelons, cadres and party members on convening the fifth party congress pointed out, aside from these achievements, we have also shown shortcomings and weaknesses in applying the party line, in national economic planning, in economic management, in distribution and circulation, in guiding implementation, and in deploying organizations and cadres.

We now not only face weighty tasks in building socialism but also in constantly upholding vigilance and standing ready to fight in defense of the fatherland. The Beijing expansionists, in collusion with the U.S. imperialists, are still pursuing aggressive schemes against our country and constantly committing acts of sabotage against us in all fields. Our country is still in a situation in which peace prevails but war remains a possibility.

The national congress is the party's highest organ of leadership, a prominent event in the party's life, and also a very important political event which is closely related to the people of all strata.

The fifth national party congress must concentrate the intellectual power of the entire party and people on further concretizing the party line of socialist revolution, developing strengths and positive factors, devising guidelines and measures to overcome difficulties and rectify shortcomings, effecting during the period of the 1981-85 5-year plan and in the subsequent years important changes in the cause of socialist revolution, firmly defending the socialist fatherland and continuing to fulfill international obligations.

The purpose of the holding of congresses of all-level party organizations is to make adequate preparations for the fifth national party congress and ensure the satisfactory organization of the implementation of the resolution to be adopted by the congress. Therefore, the convening of all-level party organization congresses must aim at the following requirements:

— To uphold the sense of responsibility, develop democracy, improve party members' intellect and see to it that party members and delegates participate in discussions of specific matters brought forth by the party Central Committee and the various party committee echelons. This will enable them to contribute positively to deciding the common tasks of the entire party and of each party organization.

— To study and discuss the general outlines adopted by the party Central Committee in connection with the actual situation in localities and units so as to further understand the party line, views, policies and guidelines. On this basis, each party committee echelon and each comrade is responsible for thinking about, studying and making good preparations for a plan to be discussed at the party organization congress.

-- To elect truly worthy and qualified delegates to attend higher-level party organization congresses or the national congress of delegates; at the same time, to perfect the party committee echelons qualitatively according to the party Central Committee specifications and guiding principles.

On the basis of ensuring the fulfillment of these requirements, the congresses of all-level party organizations will help achieve a strong identity of views at the national congress of delegates, strengthen unity and unanimity within the entire party, as well as within each party organization, and create more favorable conditions for organizing the successful implementation of the resolution to be adopted by the national congress of delegates.

After understanding the fifth party congress resolution thoroughly, all party committee echelons will review the implementation of the tasks, policies and measures set forth by the previous party organization congresses, point out strengths, seriously carry out self-criticism and criticism of the shortcomings of party organizations and party committee echelons, perfect the already prepared plans for submission to party organization congresses and ensure that all their decisions will be positive, practical and firm.

The all-level party organization congresses will be organized in two phases:

-- The first phase will be devoted to discussing documents sent down by the party Central Committee and to appointing delegates to attend higher-level party organization congresses or the national congress of delegates.

-- The second phase will take place after the national congress of delegates ends, so as to review the implementation of the resolutions adopted by the previous party organization congresses, to understand and discuss the implementation of the fifth national party congress resolution, to decide new tasks for party organizations during the period of the 1981-85 5-year plan and particularly during the tenure of party committee echelons, and to elect new executive committees in places where the terms of the current ones have expired or are about to expire. In other places, when deemed necessary, party organizations congresses may organize elections to replenish executive committees or change some committee members, in order to strengthen the party committee echelons in these places.

In places where the term of party committee echelons have expired, the first phase of party organization congresses will be devoted only to discussing issues recommended by the party Central Committee, in preparation for the national party congress. The discussion of the tasks, objectives and measures of party organizations for the next term and the election to the party committee of echelons are to be held after the national party congress ends.

In the first phase, congresses from the grassroots level upward will be held. The second phase will feature congresses at the levels of provinces and municipalities directly subordinate to the central government and then congresses at the district, precinct and grassroots levels. Following the fifth party congress, the party Central Committee Secretariat will provide guidance and methods for carrying out the second phase of all-level party organization congresses.

The election of delegates to the higher-level organization congresses and the national congress of delegates must be organized carefully, with special attention paid to ensuring their qualifications.

These delegates must be outstanding party members, absolutely loyal to the party and be endowed with good qualities and abilities. In particular, they must have a firm political stand and fully approve and thoroughly understand the party line and views on domestic and foreign affairs. They must represent the spirit of revolutionary struggle and the intellect of their party organizations, possess practical knowledge of and experience in their field of activity and be able to actually participate in discussions of issues at the congresses.

To concentrate the intellect of the party on discussing and deciding various matters at the fifth party congress, among the delegates to this congress there must be high- and middle-level cadres of leading party organs and important commissions and sectors and mass organizations at the central, provincial and municipal levels. There must also be an appropriate percentage of comrades working in districts, economic and scientific and technical institutes and production, business and professional establishments.

Attention must be paid to choosing those comrades who are capable of economic and scientific and technical management. Also attending the congress must be heroes and outstanding emulation combatants from production and business units and the armed forces.

Delegations to the congress, especially from provinces and cities, must be strengthened with an increased number of members who are workers. They must also include appropriate percentages of women and tribal cadres from ethnic minority localities.

With regard to the number of delegates to the congress, party committee echelons must organize their election in accordance with the party Central Committee Secretariart's guiding directive.

In preparation for the all-level party organization congresses and the fifth national party congress, party committee echelons, especially provincial and city party committees and party committees directly subordinate to the party Central Committee must review and satisfactorily carry out the tasks specified in the party Central Committee's letter to all echelons on the convening of the national congress of delegates.

On the basis of understanding the recent resolutions and directives of the party Central Committee and Political Bureau -- such as the resolutions of the sixth and ninth party Central Committee plenums, the Political Bureau's resolutions on the distribution and circulation of goods and on organizational work and the party Central Committee Secretariat's resolution on the immediate tasks of ideological work -- party committee echelons must accelerate the emulation movement to implement the 1981 state plan successfully. They must strive to perform well the task of issuing party membership cards in coordination with the consolidation of grassroots party organizations, especially the weak ones. Organizational and working methods must be improved and perfected. Key cadres must be assigned to the right places at all levels and in all sectors. The assignment of cadres must be planned in coordination with preparations for the elections of party committee echelons in 1982.

Provincial party committees and city party committees directly subordinate to the party Central Committee have the duty to guide and supervise the holding of grassroots and district party organization congresses and, at the same time, to make active preparations for the second phase of the provincial and city party organization congresses. Our party's present main duty is to carry out leadership over economic development. The strengthening of party leadership and the development of the party are factors deciding all victories of the revolution. Therefore, the basic task in the preparations for the second phase of all-level party organization congresses is to review the actual situation of the implementation of tasks, especially the situation of economic leadership and of party-development work carried out by party committee echelons of localities and units during their tenure and to draw upon experiences in drafting and implementing the state plan and measures concerning organization and economic management, as well as experiences in ideological and organizational tasks, in order to ensure the quality of plans and decisions to be adopted at the party organization congresses.

Party committee echelons must hold the congresses in a serious and realistic spirit, and not for form's sake. They must make every effort to avoid wastage in this respect. Soliciting the opinions of party members must be in accordance with the spirit of truly respecting them: It is necessary to listen to the opinions of party members, to raise issues for them to discuss and contribute their views, to properly review, study and receive their views and to bring them before the grassroots party organization congresses and all-level party organization congresses for discussion and approval.

The commissions and sectors at the central level must, on the basis of the general outline of the report to be presented at the fifth national party congress by the patty Central Committee, prepare matters for which they are responsible, in order, together with the provincial and city party committees, to contribute views on the important problems of each sector so that the local party committee congresses will examine and settle them.

Despite basic advantages, our people's revolutionary cause is still encountering numerous difficulties. The enemy is seeking every means possible to undermine our country's revolutionary gains and aggravate our shortcomings in a bid to incite the masses and sow dissension among our ranks. Party committee echelons and party organizations must uphold their responsibilities, strengthen unity and unanimity, promote democracy, intensively enforce discipline and strive to carry out most satisfactorily and effectively the tasks concerning production, distribution and circulation of goods, organization of the people's life, national defense and the maintenance of security. This is necessary to make the all-level party organization congresses and the fifth national party congress a splendid success.

THE GENERAL STRATEGY OF THE VIETNAMESE REVOLUTIONARY WAR WHICH DEFEATED THE US AGGRESSORS

BK291600 Hanoi TAP CHI CONG SAN in Vietnamese No 9, Sep 81 pp 19-26

[Article by Senior General Hoang Van Thai--translation previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 210, 30 Oct 81 pp K4-K10. Capitalized passages published in italics]

[Text] The forms and methods of struggle in our people's anti-U.S. war of resistance for national salvation "constituted a unified system, were closely interrelated and made up the general strategy and military art of the Vietnamese revolutionary war." (Footnote: Le Duan, SOCIALIST REVOLUTION IN VIETNAM, Su That Publishing House, Hanoi, 1980, Vol III, p 26) Our experiences in applying the general strategy of the Vietnamese revolutionary war have been extremely diversified and multifaceted. These experiences -- including those in holding fast to the strategic guidelines and laws on achieving victory in revolutionary warfare, applying various forms and methods of attack, and in combining the strength of our people and nation with that of the people of the world in the present era -- have tremendous practical significance for our people's present war of national defense.

HOLDING FAST TO THE STRATEGIC GUIDELINES AND CORRECTLY APPLYING THE LAWS ON THE DEVELOPMENT OF AND ON ACHIEVING VICTORY IN REVOLUTIONARY WARFARE, WE DEFEATED THE ENEMY STEP BY STEP AND ADVANCED TO DEFEAT HIM COMPLETELY.

The war waged by the U.S. imperialists in the southern part of our country was a neocolonialist war of aggression. In spite of their demogogic political tricks and their deceitful slogans of "independence," "nation" and "democracy," they could not conquer the southern people, an enormous and staunch revolutionary force highly experienced in struggle who, led by a seasoned Marxist-Leninist Party, joined the people in the rest of the country in making the August revolution and defeating the French imperialist aggressors. Therefore, the U.S. imperialists had to structure their ruling apparatus in a highly facist manner and had to resort to cruel military tricks as their principal tools in repressing our people's revolutionary movement.

Our people in the south used political struggle -- that is, pitting their greatest strength against the enemy's greatest weakness. However, to defeat an enemy in war, one must frustrate his military tricks. For this reason, military force must be used.

The struggle between our people and the U.S. imperialists raged fiercely every day and every hour on both the political and military fronts. THE SOUTHERN REVOLUTION'S STRATEGIC GUIDELINE WAS THAT POLITICAL STRUGGLE MUST GO IN PARALLEL WITH ARMED STRUGGLE AND THAT BOTH MUST BE CONSIDERED AS PLAYING A VERY BASIC AND DECISIVE ROLE. Political struggle develops according to the law that the struggle for welfare and democracy and against terrorism, and so forth, will eventually lead to armed uprisings. Once started, an armed struggle will develop in accordance with the laws of war. The revolutionary war of our people in the south was governed by these two laws. HOWEVER, WHEN A REVOLUTIONARY STRUGGLE HAS DEVELOPED INTO A REVOLUTIONARY WAR, IT WILL BE GOVERNED PRIMARILY BY THE LAWS OF WAR, THAT IS, THE LAWS OF ARMED STRUGGLE. Therefore, while simultaneously holding fast to the strategic guideline that political struggle must advance in parallel with armed struggle, we also adhered to the laws of war and considered this to be an extremely important requirement of strategic leadership and a measure aimed at creating a great aggregate strength with which to defeat the enemy militarily and to lead the revolutionary war to victory.

To hold fast to the laws of war is to make every effort to build our armed forces comprising the three types of forces, especially the main force. In this way we were able to create on-the-spot forces in order to break up, contain, wear down and destroy the enemy everywhere and to organize main force units strong enough to deal decisive blows to the enemy on selected battlefronts. We attached the utmost importance to building and organizing political forces into strong political armies so as to wage a face-to-face struggle against the enemy and to defeat his pacification policy. We actively built on-the-spot logistic bases and exploited local human and material resources. On the basis of our long-term strategic guidelines, we built combat positions and prepared the battlefields for main force units to launch large-scale annihilating attacks so as to effect a radical change in the balance of forces between us and the enemy. We made every effort to consolidate and build the socialist north in all fields -- political, economic and national defense -- and to develop its role as the great rear of the great front, the south. We built increasingly modern regular armed forces capable of defeating all enemy military ventures into the north. They also served as strategic reserves for the entire country, standing ready to move to fight the enemy in the south and launching joint operations with the armed forces of the two fraternal peoples in the Lao and Kampuchean theaters.

The political and armed struggles were waged in all three strategic areas: the forests and mountains, the countryside and plains, and the cities. We had to determine a suitable scale on which to combine the political struggle with the armed struggle in accordance with our tasks and in view of the balance of forces between us and the enemy in each area, in each place and in each period. At the same time, we had to decide where to concentrate our leadership so as to keep pace with the development of the revolutionary struggle.

We commanded an absolute supremacy over the enemy in political and moral strength, a strength which developed increasingly in our favor. In the beginning, however, as we were inferior to the enemy in terms of armed forces and technical equipment, we needed time to tip the balance of force between ourselves and the enemy. For this reason, the guideline of the war for the liberation of the south was: GO FOR PROTRACTED FIGHTING AND BUILD UP STRENGTH WHILE FIGHTING.

Protracted fighting, however, does not mean engaging in drawn-out battles while lying low and waiting for changes from outside. It means that we must strive to alter the balance of force between ourselves and the enemy. Protracted fighting and building up strength while fighting must be understood as a process of continuous and all-out attack against the enemy in all the three strategic areas. The purpose of such attacks is to repel the enemy gradually, prepare for future assaults, and win ever greater victories. In the anti-U.S. war of resistance, protracted fighting meant that we had to simultanously attack and contain the enemy, force him to deescalate the war gradually, concentrate our efforts on containing him and concentrate the efforts of the whole country on defeating him on the great southern front.

A revolutionary war is often marked by dramatic changes. These changes do not come continuously; they occur one by one, according to a gradual process. Therefore, while persistently adhering to the guideline of aiming for protracted fighting and building up strength while fighting, we must make great efforts to build and develop our strength in all fields -- military, political, economic, and diplomatic. We must strive to create opportunities, and when a good opportunity presents itself we must promptly seize it and launch resolute and strong attacks to defeat the enemy's military strategies one by one and to win decisive victories so as to advance to complete victory.

During the more than 20 years of the anti-U.S. struggle, under the clear-sighted and skillful leadership of the party, our people persistently stepped up the war of resistance, incessantly built and developed the position and strength of the revolution and actively prepared for favorable opportunities.

When the opportunity presented itself, our party promptly led our armed forces and people in making great leaps forward, thereby defeating all the enemy's military strategies. The concerted uprisings in 1960 shifted the revolutionary struggle from the force-preserving position to the offensive position and transformed it into a revolutionary war which successively defeated various U.S. military strategies -- the "special" war strategy and the regional war strategy in the south -- thereby driving the enemy into a strategic deadlock. The general offensives of spring 1968, which struck at the enemy's nerve centers and defeated the first U.S. war of destruction in the north, dampened his aggressiveness and forced him to deescalate the war. We frustrated the U.S. military adventure in Kampuchea and helped the Kampuchean revolution to develop by leaps and bounds. We joined the Lao People's Liberation Armed Forces in defeating and annihilating the enemy on the Plain of Jars, and on Route 9 in southern Laos, thus smashing the enemy's scheme to isolate the war of resistance of the people in South Vietnam. We took the initiative in seizing the opportunity, preparing the battlefield and launching counteroffensives to annihilate entire enemy battle groups and completely defeat all enemy counterattacks. We lost no time in launching the 1972 strategic offiensive in several directions, wiping out entire enemy divisions and liberating entire areas in the south while frustrating the second U.S. war of destruction and the surprise B-52 air raids against Hanoi and Haiphong in late 1972 and smashing the scheme of collusion between the U.S. imperialists and the Beijing reactionaries. We defeated the U.S. "Vietnamization" strategy, completely crushed the U.S. imperialists' strategic ambitions and forced them to sign the Paris Agreements on Vietnam and withdraw their forces and those of their allies from south Vietnam.

The great leaps forward we made in defeating various enemy military strategies, and especially the great efforts of our armed forces and people throughout the country in 1973 and 1974, helped create strategic conditions for the general offensives and uprisings in early 1975 which resulted in the annihilation and disintegration of the U.S. puppet army, the total liberation of South Vietnam and the reunification of the fatherland.

WE APPLIED A COMBINATION OF VARIOUS METHODS AND FORMS OF STRUGGLE, THEREBY CREATING AN ENORMOUS STRENGTH WITH WHICH TO LAUNCH MILITARY ATTACKS AGAINST THE ENEMY.

In the war for the liberation of the south, our party mobilized, organized and developed all forces and used many forms and methods of operation to promote their strength in each strategic stage as well as throughout the war, in each strategic area as well as in the entire southern region, in each campaign as well as in each wave of attacks and each strategic offensive, and even in each battle and in the activities of each person. Therefore, the strength of these forces was developed to a high level and was combined to form an enormous strength during the war.

The basic strategic guideline for the southern revolution was that political struggle must advance in parallel with armed struggle. In terms of the methods and forms of struggle, the combination of political struggle and armed struggle is a combination of two forms of offensive by the political and armed forces in the use of revolutionary violence.

Political struggle is the basic form of struggle. In its diversified forms, from elementary to advanced, political struggle provides a basis for gradually awakening the masses and mobilizing, organizing, training and turning them into an ever stronger force. This will enable the masses, when the opportunity is ripe, to rise up in arms and join the armed forces in doing away with the enemy's rule. In the war for the liberation of the south, the political forces, together with the armed forces and military proselyting forces, formed three prongs of attack in all the three strategic areas and during all stages of the war.

Military struggle is also a basic form of struggle. It plays a direct and decisive role in annihilating enemy military forces and serves as a lever in assisting other struggles and stimulating their development.

In the anti-French war of resistance, the combination of the two forms of struggle of the political and military forces helped create an enormous strength for the people's war, which defeated the French imperialists. In the anti-U.S. war of resistance, the combination of these two forces was elevated to a high standard in terms of quality, organization, scale, form, space and time. As a result, the strength of each force as well as their combined strength was multiplied manyfold.

The combination of political struggle and military struggle was realized at a high level in the offensive campaigns launched by various strategic corps [Binh Doan] on selected battlefields; in the joint campaigns on the countryside and lowlands battlefront; in the big campaigns directed at the cities; in the strategic offensives and uprisings which defeated the enemy's military strategies one by one; and, finally, in the general strategic offensives and uprisings which resulted in the total collapse of the enemy forces and total victory.

COMBINING POLITICAL STRUGGLE WITH MILITARY STRUGGLE IS A PROMINENT FEATURE AND ALSO A MAIN OBJECTIVE of the general strategy of people's war. This is also a law which governs the development of our people's revolutionary war.

The basic problem of all revolutionary wars is to annihilate the enemy's armed forces. For this reason, a demand which we must firmly grasp in combining political struggle with military struggle is TO CREATE A MILITARY STRENGTH CAPABLE OF DEFEATING THE ENEMY MILITARILY ACCORDING TO THE OBJECTIVES AND REQUIREMENTS OF EACH BATTLE OF EACH CAMPAIGN, OR ACCORDING TO THE SET STRATEGIC TASKS. Therefore, we must attach utmost importance to the pivotal and decisive role of military struggle while giving due attention to the form of political struggle and the political force of the revolutionary masses.

ATTACKING AND RISING UP, RISING UP AND ATTACKING — this was a law of the revolutionary war in the south, which was fought with the strength of the entire people in uprisings and offensives. This was also a method of revolutionary struggle which reflects the immutable law that war means offensive. Offensive is an action taken by revolutionary armed forces against the enemy's armed forces, whereas uprising is an action of the revolutionary masses taking up arms to smash the enemy's coercive apparatus. Offensives must be combined with uprisings so as to create conditions for the masses to rise up. The masses' uprisings must be combined with the armed forces' offensives, must exploit their results and, at the same time, must create conditions for subsequent offensives. This combination must be done from a low level to a higher level, from the small scale to a larger scale, and from each component to entire organizations. Thus combined, the masses' uprisings and the armed forces' offensives will eventually develop into general offensives and simultaneous uprisings in accordance with the laws of war and uprising in war.

The main purpose of a military offensive is to annihilate the enemy's armed forces, thereby creating conditions for the masses to rise up to achieve mastery. Therefore, offensives and uprisings must achieve the objective of annihilating the enemy and gaining mastery for the people. The further the boundaries of mastery are extended and the higher its level becomes, the more conditions it will create for the annihilation of ever larger enemy forces.

Vietnam's experiences were not limited only to launching offensives, staging uprisings, annihilating enemy forces, achieving mastery in the rural areas, using the rural areas to encircle the cities, and lying low in the cities while waiting for opportunities. They were the results of the coordination of actions between the rural areas and the cities. As the war expanded, the role of the enemy-annihilating offensives became more decisive. These offensives eventually developed into general offensives which resulted in the annihilation and total disintegration of the enemy's forces, thereby creating conditions for the masses in both the rural areas and the cities to rise up to achieve mastery throughout the country. The 1975 early spring general offensives and uprisings were the culmination of the combination of various forms of revolutionary struggle and the development of the increasingly decisive role of armed struggle in our people's anti-U.S. struggle for national salvation.

In military struggle and armed struggle, our party "combined the three types of forces: the main force, local force and militia guerrilla force. It combined guerrilla war with conventional war and large-scale with medium-scale and small-scale fighting." (Footnote: RESOLUTION OF THE FOURTH NATIONAL VCP CONGRESS OF DELEGATES, Su That Publishing House, Hanoi, 1977, pp 12-13)

Guerrilla war and conventional war WERE TWO MODES OF REVOLUTIONARY WAR AND BOTH PLAYED IMPORTANT STRATEGIC ROLES. (They have now developed into a local people's war and the war fought by main force corps.) Guerrilla war was not only limited to guerrilla fighting but became a form of the revolutionary masses' uprisings to overthrow the enemy administration and a form of armed struggle of the large revolutionary masses. Widely expanded in all the three strategic areas, guerrilla war broke up, contained, wore down and annihilated enemy troops, thus turning large and strong enemy forces into smaller and weaker ones, creating conditions for the enemy forces at one time and changing the situation of the war.

As in the anti-French war of resistance, the armed struggle in the anti-U.S. war of resistance proceeded according to the laws of guerrilla war, that is, it was combined with and eventually developed into conventional war.

Conventional war is the struggle of concentrated armed forces in increasingly larger joint operations involving all armed branches and services. In the anti-U.S. war of resistance, the conventional war in the south, bolstered by direct military aid from the socialist north, underwent radical developments and played a direct and decisive role in wiping out the enemy's main forces.

Combining guerrilla war with conventional war is a law ensuring the victory of our armed struggle against a militarily strong enemy. Only by being combined with conventional war can guerrilla war develop and create conditions for the local armed forces and the masses to step up their struggle and to rise up to gain mastery in their localities. By the same token, only by being combined with guerrilla war can conventional war develop vigorously and turn its strength to good account in attacking the enemy. Our experiences in the anti-U.S. war of resistance have shown that the correct combination of the two modes of war helped create for us an enormous military strength with which to defeat the enemy's military strategies one by one. They have also shown that at times and in certain places weak guerrilla war efforts curbed the activities of the main forces, prompted them to scatter their troops to assist the guerrilla forces, and even forced them to temporarily leave the battlefields.

In combat, combining guerrilla war with conventional war is to combine the combat activities of the three types of forces: the main force, the local force, and the militia guerrilla force. It also means combining large-scale with medium-scale and small-scale fighting in diversified forms. It calls for attacks against enemy forces on the move, on maneuvers or engaged in mopping-up operations. These attacks must be launched in coordination with suprise strikes against enemy forces in their jumping-off bases; with assaults by concentrated and mobile units against enemy troops outside their bases; with raids against targets deep in areas under temporary enemy control; and with strikes by elite forces against towns and cities and the enemy's nerve centers and warehouses. They must also be combined with sabotage and disruption of communication lines and the destruction of the enemy's sources of supplies and with drives to divide enemy forces so as to annihilate them. The attacks to destroy enemy forces must be coordinated with proselyting work among enemy troops so as to break up their ranks; with the destruction of the enemy's strength and war means; and with the efforts to defeat the main tactical measures of each of the enemy's military strategies. All these forms of fighting were encapsulated in six general strategic combat methods which we employed in the war for the liberation of the south. Together with the fighting methods used by the three types of forces in defeating all U.S. air and naval attacks against the north, these forms of fighting contributed to developing the military art of people's war in the two parts of our country to a high level.

Concerning fraternal neighboring Laos and Kampuchea, our party held that these two countries could triumph only if the Vietnamese war of resistance were victorious and that, coversely, the Vietnamese revolution could achieve total victory only if the Kampuchean and Lao revolutions triumphed. With their spirit of proletarian internationalism, our people spared no efforts, including their own blood, to contribute to the revolutionary cause of the two fraternal peoples. Our party set great store by the assistance given us by the fraternal Lao and Kampuchean peoples, assistance which really created more favorable conditions for and gave more moral and material strength to our people's anti-U.S. war of resistance. Our party always inculcated in our armed forces and people genuine patriotism and proletarian internationalism and taught them to struggle against big-nation chauvinism, narrowminded nationalism and individualism as well as all manifestations of the fear of hardship and sacrifice which prevent one from realizing that fulfilling one's international duty is a great honor. The militant alliance among the three countries and peoples, which has now become a tradition, was a law ensuring the development and success of the revolution in each country in the past anti-French and anti-U.S. wars of resistance. This alliance is developing in the present situation and will continue to do so forever.

Fully aware of their responsibility for the revolutionary movement in general and the national liberation movement in particular, our people have done everything they could to support the revolutionary struggle of other peoples. Conversely, we have enjoyed the sympathy and support of the people of the world, including progressive American people.

With regard to the great family of socialist countries, our party has made every effort to consolidate the solidarity and single-mindedness of the fraternal countries. Together with the fraternal parties, it has actively contributed to preserving the purity of Marxism-Leninism, in the interests of our people as well as those of the socialist system and other peoples in the world. Our party valued very highly the assistance of the fraternal socialist countries, especially that of the Soviet Union, and considered it an extremely important factor ensuring the victory of our people's struggle.

Our party resolutely opposed and frustrated all schemes of the Beijing leadership, who colluded with the U.S. imperialists to obstruct and sabotage our people's anti-U.S. struggle for national salvation.

It can be said that, ever since its founding, our party, in pursuing its revolutionary line and formulating its revolutionary methods, has always closely associated our people's revolutionary cause with that of other peoples in the world. In the anti-U.S. war of resistance, this association was achieved on a higher level and closer than ever before. For this reason, our people's revolutionary struggle showed a national as well as a marked epochal character. This was also a victory of our party's line of holding aloft the two banners of national independence and socialism in the anti-U.S. struggle for national salvation.

Today, along with building socialism nationwide, our people and their armed forces always uphold their revolutionary vigilance, fight and stand ready to fight, combine economic building with strengthening national defense, and carry out the task of building and defending the socialist Vietnamese fatherland.

We are armed with the correct political and military lines laid down by the fourth party congress and amended and perfected by various party Central Committee resolutions. We are applying the experience derived from our efforts to develop the general strategy during the anti-U.S. war of resistance. We closely combine our national strength with the strength of the three revolutionary currents, which are now on the offensive. Especially, we are benefiting from our militant alliance with fraternal Laos and Kampuchea, from our alliance and multifaceted cooperation with the Soviet Union and from our cooperation with other fraternal countries in the socialist community. With all this, we will certainly be able to create an enormous aggregate strength with which to defeat any act of aggression against our country.

Our party PAYS UTMOST ATTENTION TO THE DIPLOMATIC STRUGGLE as this struggle is also aimed at creating more favorable conditions for our people's multifaceted struggle to develop. For this reason, in the recent anti-U.S. war of resistance for national salvation, our party pursued an extremely active and positive foreign policy reflecting its firm principles, strong position and flexible and skillful tactics and measures. On the other hand, our party holds that battlefield victories, especially military victories, are the most decisive factor in war and that diplomatic victories, a very important factor in our people's multifaceted struggle, totally depend on military victories. It was the victories of the 1968 spring strategic general offensives and the 1972 strategic offensives in the south, together with the defeat of the two U.S. wars of destruction in the north, which forced the United States to sit down for talks, to accept our conditions, to sign the Paris Agreements on Vietnam, and to withdraw the U.S. and allied troops from the south. The diplomatic activities of our state and people enabled the people of the world, including the American people, to see ever more clearly the aggressive, unjust and reactionary nature of U.S. imperialism and our just stand. They also won for us increasing support and sympathy from the people of the world and drove U.S. imperialism into utter isolation.

WE UPHELD THE SELF-RELIANT SPIRIT AND RELIED MAINLY ON OUR OWN STRENGTH WHILE STRIVING FOR INTERNATIONAL AID AND COMBINING THE STRENGTH OF OUR ENTIRE NATION WITH THAT OF THE ERA TO CREATE AN ENORMOUS AGGREGATE STRENGTH FOR THE PEOPLE'S WAR TO DEFEAT THE U.S. IMPERIALIST WAR OF AGGRESSION.

"The certain road to victory is for the revolution in each country to combine its own strength with that of the era and with the offensive posture of all revolutionary forces around the world so as to formulate struggle strategies, tactics and methods consistent with the balance of forces and the actual situation in the country." (Footnote: POLITICAL REPORT BY THE VCP CENTRAL COMMITTEE AT THE FOURTH NATIONAL VCP CONGRESS OF DELEGATES, Su That Publishing House, Hanoi, 1977, p 176.)

The Vietnamese revolution is part and parcel of the world revolution. Our people's anti-U.S. war of resistance was the spearhead of the three revolutionary currents in the world. Therefore, each victory of these three revolutionary currents has exerted a positive impact on our people's victories. Conversely, our people's victories have made important contributions to the offensive posture and strength of the three revolutionary currents. The combination of national strength and that of the era was the law which helped create an aggregate strength for the revolutionary war to defeat the U.S. aggressors.

Demonstrating self-reliance and depending mainly on its own strength, the party explained to the entire armed forces and people the significance of our people's revolutionary war, always upheld pure patriotism and national spirit and motivated the entire party, armed forces and people in both the south and the north actively to fight and defeat the United States and to heed at all costs President Ho's appeals: "Nothing is more precious than independence and freedom" and "as long as a single aggressor remains in our country, we still have to continue to fight to drive him out." (Footnote: Ho Chi Minh: SELECTED WORKS, Su That Publishing House, Hanoi, 1980, Vol II, p 505, the party also inculcated in our armed forces and people the spirit of proletarian internationalism and helped them gain a correct understanding of the close relations and unity between national and international interests. On this basis, the party enabled them, on the one hand, to fulfill actively their duty on the frontline against the U.S. aggressors and, on the other, through their practical act of discharging their international obligation, to receive and use effectively the aid of the socialist camp and to win the sympathy and support fo the world people, thereby contributing to further increasing our people's strength.

THE THREE ECONOMIC INTERESTS IN SOCIALISM

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 9, Sep 81 pp 27-31

[Article by Doan Trong Nha]

[Text] The Specifics Involved in the Three Economic Interests in Socialism

Economic interests are the form of expression of the objective economic relationships of the persons who have these interests. However, in the end, they are reflected in the consciousness of man and implemented through the production activities of the various classes, of various groups and of specific persons. In the process of productive labor, man can act in accordance with one objective or another but this does not mean that economic interests arise from his consciousness, rather, they are only expressed as a projection of consciousness. In "Philosophical Notes," V.I. Lenin wrote: "Actually, the goals of man are given birth by the objective world and the objective world is used as his foundation, is considered to be that which exists, considered to be reality. However, it appears that the goals of man are derived from outside the world, derived independent of the 'free' world."(1)

Economic interests stimulate the economic and political activities of the various classes. In the economic field, the motive for the actions of the various classes is to acquire ownership of the primary instruments of production and, on this basis, determine the mode of management and, in the end, arrange the distribution of products in a way that benefits the class. Therefore, economic interests are expressed as class interests and the position of a class is determined by the relationships involved in the ownership of the instruments of production.

Within socialism, national ownership of the instruments of production confirms that the primary instruments of production and all natural resources are owned and used by all of society; it is on this basis that the economic interests of society emerge.

The foundation of the economic interests of society is the system of large-scale socialist production that is built and developed on the basis of socialist public ownership of the instruments of production and socialist collective labor. The economic interests of society demand that the quantity, quality and variety of the social product be constantly increased by constantly developing and improving production and raising the efficiency of production on the basis of utilizing the latest achievements of science and technology and the efforts of the collective labor of all of society for the purpose of meeting the rising material and cultural needs of society better. V.I. Lenin said: "Once it controls state government, the proletariat has but one basic, vital interest, that is, to increase the quantity of products and expand the production capacity of society on large scales."(2)

The economic interests of society are most vividly expressed in the economic line and the economic strategy of the party and the dictatorship of the proletariat state; they are concretized in the economic and social development plans adopted during each specific period of history. For this reason, satisfying the economic interests of society demands that the sectors, localities and economic installations have as their goal meeting and exceeding the quotas of the state plan. Every action that violates the principle of democratic centralism in the economic management of the socialist state and every phenomenon involving partialism, localism, misappropriation and waste that poses difficulties to the effort to complete the state plan harm the economic interests of society.

The economic interests of society demand that the state-operated enterprises and cooperatives must, when using the instruments of production of society and of the collective, fulfill the functions established for them by the state, such as producing products of appropriate quality in accordance with the product list, making efficient use of the sources of labor, supplies and machinery and reducing production costs. In their production and business activities, they must successfully implement the principle of achieving financial solvency and earning a profit in order to cover production costs in the process of social reproduction; at the same time, they must contribute some of the surplus product produced by them to the state in the form of state-operated revenues, profits, social security payments, agricultural taxes, the sale of agricultural products under two-way economic contracts and the other forms of taxes paid by private producers and businessmen. Every act of evading taxes or waiving taxes on a sweeping basis is contrary to the economic interests of society.

In socialism, establishing cooperation and a division of labor in order to produce material wealth for society becomes an economic-technical necessity due to the socialized nature of the instruments of production. The labor of each person cannot take the form of a product produced by an individual laborer but assumes the form of the final product of the collective labor of each production unit.

Under these conditions, the economic interests of society can only be realized by means of the collective labor within the state-operated enterprises and cooperatives. It is on this basis that collective interests emerge.

The economic interests of the collective demand that the basic economic units create efficient forms of organization of labor and work methods in order to make the best possible use of their labor force, natural resources and material-technical bases for the purpose of producing a new quantity of high quality products for society at low costs.

The existence and development of the economic interests of the collective demand that enterprises and cooperatives, in the process of their production and business, cover their production costs; on the other hand, they must make every effort to improve their production, improve their management, raise their labor productivity and, on this basis, increase their enterprise profits with a view toward increasing the funds of the enterprise: the fund for improving the production process of the enterprise, the award and bonus fund for increasing the income of good workers and encouraging workers to give more attention to the results of the enterprise's production and the collective welfare fund for improving working conditions, recreation and cultural activities of the worker.

The system of socialist ownership of the instruments of production establishes the obligation and right to work of each person within society. Every person who is able to work has an obligation to work and has the right to participate in work in order to create material wealth for society; on this basis, the worker has the right to receive an appropriate percentage of the fruits of his labors. It is on this basis that the economic interests of the individual emerge.

The economic interests of the individual are realized in the form of wages and bonuses (within the state-operated enterprises), the income per manday and the income from the household subsidiary economy (within the cooperatives) and the use of the social welfare and collective welfare funds.

In socialism, each individual's labor is a part of collective labor, consequently, the economic interests of the individual are not only dependent upon the quantity and quality of the labor of each person, but also dependent upon the final results of the collective labor of the entire enterprise or cooperative. Therefore, concern for the economic interests of the individual demands that every person truly work, work in an organized, disciplined and technical manner and heighten his sense of responsibility to the community and his sense of collective ownership in the production and business activities of the enterprise or cooperative.

The economic and technical conditions of socialism are not such that labor becomes a natural need of man, becomes totally voluntary labor performed for the sake of the interests of society; to the contrary, labor is still a means for sustaining life, consequently, it is necessary to calculate and inspect the quantity and quality of labor performed by each person in order to distribute consumer products to each person. Under these conditions, showing appropriate concern for the material needs and the individual economic interests of each worker has the effect of gaining the participation of each person who is able to work in labor and stimulating higher labor productivity. V.I. Lenin said: "Providing incentive for the interests of the individual has the effect of increasing production."(3)

The Relationship Among the Three Economic Interests in Socialism

The system of socialist ownership of the instruments of production abolishes every antagonistic relationship among workers. Within the system of social production, new relationships arise--relationships of cooperation, equality, mutual help in the spirit of comradeship, in the spirit of "one for all and all for one." The system of socialist ownership causes the labor of each individual to become direct social labor and causes every product produced by the state-operated economy or the collective economy to be the result of the labor performed by all of society. As a result, every fruit of labor contains something for society, something for the collective and something for the individual in accordance with a specific ratio. This ratio changes depending upon the level of economic development during each specific period. However, according to K. Marx, the percentages allocated to society and the collective always benefit the worker and are designed to satisfy the immediate or long-range interests of the worker. Marx said: "...That which the producer loses from the standpoint of an individual he receives, either directly or indirectly as a member of society."(4)

The above analysis proves that, under the conditions of socialism, the production worker is a person who simultaneously embodies all three economic interests. As an independent member of society, he embodies individual economic interests. As a collective laborer within an enterprise or cooperative, he embodies collective economic interests. As the collective owner of the instruments of social production, he embodies the interests of society.

The unity of the three economic interests shows that it is not possible to merely satisfy one of these three interests. To satisfy the economic interests of the individual, it is necessary to satisfy the economic interests of society and the economic interests of the collective and vice versa.

When engaged in productive labor, every economic unit and individual has the right to concern themselves with their legitimate interests. This is a simple truth because man does not live by air and water alone. However, concern for the economic interests of the collective and for individual economic interests must be based on the economic interests of society.

The fact that the economic interests of the collective and the individual must be based on the economic interests of society in no way means that the moving forces behind the various economic interests are converted into factors of a political nature, in no way means that economic relations are replaced by political relations. The purpose of emphasizing the role played by the economic interests of society is to provide the material means and the economic-technical measures needed to constantly carry out expanded reproduction, raise labor productivity, rapidly increase the gross social product and national income and create the conditions for satisfying the economic interests of the collective and the individual better. Within socialism, the product of labor belongs to the collective and society; the material wealth and the spiritual well being of each individual can only be achieved on the basis of the wealth of all of society. This is proven by facts in the socialist countries: the economic interests of society have been an extremely important factor in the success of socialist construction and been a firm foundation for developing the economic interests of the individual and the collective.

Thus, in theory as well as practice, the economic interests of society are clearly the dominant economic interests; they determine the scale, structure, rate of development and direction of development of the national economy and, as a result, determine the degree to which the economic interests of the collective and the economic interests of the individual are satisfied.

Acknowledging the dominant role played by the economic interests of society does not mean giving light attention to the interests of the collective and the interests of the individual. The socialist state not only concerns itself with the economic interests of society, but also with the economic interests of the collective and the individual. During the period of transition, when the level of development of production is still low and workers still encounter numerous difficulties in their daily lives, the economic interests of the collective and the individual play the role of stimulating the development of production and must be given appropriate attention. Because, the basic economic units, such as the enterprises, state farms and cooperatives are the places that directly manage and use the instruments of production, the labor force, raw materials and material-technical bases in order to produce material wealth. Therefore, the degree to which the economic interests of society, the collective and the individual are satisfied depends upon the labor productivity and economic returns of the basic economic units, upon the initiative in production of each collective worker. Of course, giving appropriate attention to the interests of the collective and the individual does not mean turning them into "guild" interests or "selfish" individual interests that harm the economic interests of society.

The mutual dependency among the three economic interests in socialism is an objective necessity and demands that the economic policies of the socialist state in the field of production as well as in the field of distribution and circulation correctly apply the economic laws of socialism (because the various economic interests lie within the mechanism of the various economic laws) in order to insure the unity of the three economic interests in every production activity and every fruit of labor so that the state, the collective and the individual laborer benefit. Le Duan has defined the dialectical unity among these three economic interests as follows: "socialism is a society of free workers in which the interests of the individual and the interests of society are the same; the interests of each worker and his family, the interests of the production collective and the interests of the state are the same. Only when society prospers does each person prosper. That which benefits society benefits the individual. That which harms society harms the individual. Society cares for the life of each person and each person works as best he can for society. Working for society is the same as working for oneself."(5)

When we talk about the unity of the three economic interests within socialism we do not mean to deny the causes of antagonisms among the three interests.

The division of social labor and the existence of different production units as a result of this division of labor are the objective causes of the antagonisms among the three economic interests. These antagonisms can also arise as a result of not distributing products in a reasonable manner, thus causing one economic interest to encroach upon another. For example, if, in the distribution of national income, we do not establish a precise ratio between the essential product and the surplus product, it will create an antagonism between the economic interests of the individual and the economic interests of the collective and society. If a reasonable percentage of the surplus product is not allocated to the state and the enterprise, an antagonism will develop between the economic interests of the collective and the economic interests of society. The same holds true in the price policy; if product prices are low, the enterprise will be unable to earn a profit or cover its production costs and this will harm the economic interests of the collective and the individual; if these prices are too high, the enterprise's collective will benefit but society and the mass of consumers will not benefit, that is, the economic interests of society will be harmed.

Thus, the division of social labor itself is the objective basis of the antagonisms among the three economic interests and the adoption of incorrect economic policies also causes these antagonisms to arise and develop. However, these are not opposing antagonisms; because, when the working people exercise collective ownership on a nationwide scale as well as within each locality and installation, even a decline in one interest and a resulting increase in another does not lead to the loss of interests as is in the case of a society consisting of opposing classes.

THE FIRST STEPS IN THE ESTABLISHMENT OF AN AGRO-FORESTRY-INDUSTRIAL STRUCTURE WITHIN VAN CHAN DISTRICT

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 9, Sep 81 pp 32-37

[Article by Do Khac Cuong, secretary of the Van Chan District Party Committee, Hoang Lien Son Province]

[Text] Van Chan, a mountain district in Hoang Lien Son Province, has a population of 110,000, a population that consists of 20 fraternal nationalities: the Thai, Tay, Dao, Muong, Mong, Xa, Giay, ethnic Vietnamese and so forth. In 1976, the state approved the agro-forestry production development planning of Van Chan. In recent years, despite encountering numerous difficulties caused by natural disasters, shortages of raw materials, fuels and building materials and the consequences of the war of aggression unleashed by the Beijing reactionaries, the entire party organization and all the people of the district have determinedly overcome every difficulty and reorganized production in order to implement the economic line of the party and begin to establish an agro-forestry-industrial economic structure within the district.

I. Reorganizing Production and Developing Agriculture, Forestry and Industry Within the District

In order to implement its planning, Van Chan established three production areas: a centralized rice production area measuring 2,400 hectares (the Nghia Lo field); a centralized tea growing area measuring 3,200 hectares; and a centralized afforestation area (linden and "mo" trees) measuring 6,000 hectares. Each production area is a specialized, integrated farming area in order to make full use of arable land and produce grain and various types of subsidiary food crops, plant forests, raise tea, etc. In the process of reorganizing production, the cooperatives in Van Chan formulated economic plans for the initial stage that eliminated the mono-culture of grain, accelerated the planting of perennial industrial crops, accelerated forestry and gradually established the new division of labor within the district.

1. Grain production.

On the basis of reallocating crops, Van Chan has increased the rate of the intensive cultivation of grain crops and gradually established a grain balance within the district.

In 1976, our district concentrated on guiding the practice of intensive cultivation, the restoration of existing fields to production and the full use of all land with a gradient of less than 15 degrees for the cultivation of rice and subsidiary food crops while building terraced fields. At present, we have 7,000 more hectares under cultivation than in 1976. We have constructed a system of material-technical bases supporting the agricultural production of the district that consists of an agricultural meteorological station, two crop production stations (for rice and tea), a veterinary station, a rice seed farm, a hog breeding farm, a tractor station with 15 tractors, an agricultural and technical supply corporation and a farmland water conservancy corporation. As regards water conservancy, we have invested in and repaired seven dams, three reservoirs and a number of small ditch and dam projects which effectively irrigate and drain more than 30 percent of the land under the cultivation of wet rice. As a result, the average rice yield of the district in 1980 reached 4.265 kilograms per hectare, a 465 kilogram per hectare increase compared to 1977; total grain output was 30,627 tons (18,627 tons of paddy), which represents and 8,800 ton increase compared to 1976 and an annual rate of growth of 10 percent. Each year, 14 percent of grain output is mobilized for the state. In order to achieve the goal of self-sufficiency in grain within the district, we are endeavoring to raise the output of grain to 36,000-40,000 tons; thus, Van Chan must try to raise the yield of rice to 6 tons per hectare, the yield of corn to 18 quintals per hectare, the yield of cassava to 13 tons of fresh tubers per hectare, etc. If we do not achieve the minimum level of grain production, it will limit and even reduce the rate of production of industrial crops, forestry and industrial production.

2. Building the specialized tea growing area.

Tea plants have been growing for many years in Van Chan; each farm household has a garden of tea plants near their house and, in particular, a number of highland areas, such as Suoi Giang, Suoi Quyen and so forth, have been raising tea for many years.

In the agricultural cooperativization movement, hardly any of the cooperatives were managing the land on which tea grew, rather, they were only concentrating their efforts on grain production (the monoculture of rice). It was not until we established the task of developing the production of perennial industrial crops, primarily tea, that the agricultural cooperatives turned their attention to managing the land under the cultivation of tea, restoring old tea fields to production and opening new land to tea cultivation. The agricultural and forestry zoning of Hoang Lien Son Province has placed Van Chan District within the tea growing area, consequently, the district has had to develop the cultivation of tea along specialized lines in coordination with the processing of tea. In the past 5 years (1975-1980), we have received 7,319 laborers (more than 20,000 persons in total) from Thai Binh Province to participate in economic construction within the locality, primarily in the growing of tea and the settlement of nomads at 10 cooperatives in the highlands that initiated tea production (and the raising of cinnamon and afforestation), consequently, we rapidly established a centralized tea growing area consisting of 3,200 hectares.

By 1980, Van Chan had 4,880 hectares of tea, 81 percent of which (2,836 hectares) lies within cooperatives. In accordance with the district's planning of tea production, the amount of area under the cultivation of tea was set at 50 percent of the amount of agricultural land, thus exeeeding the amount of area under the cultivation of rice and becoming the main business sector of the three state farms and the 20 cooperatives that specialized in growing tea. In order to help the agricultural cooperatives in the area of the techniques of growing, cultivating and harvesting tea, the state farms held training classes for cooperative members who grow tea, especially the heads and assistant heads of units. On the other hand, the state farms also supplied seed to the cooperatives with which to develop their tea production and raise the district's average yield from 1 ton per hectare to 2.5 tons per hectare; at the same time, our district constructed two crop protection stations for tea and rice. In 1979, Van Chan produced 9,200 tons of commercial fresh tea.

On the basis of specializing the growing of tea, Van Chan constructed two black tea processing plants and one fragrant tea processing plant. In 1979, it supplied to the national economy 1,600 tons of black tea and 200 tons of fragrant tea for domestic consumption and exportation. The total output value of exports in 1979 exceeded 6.6 million dong; each person within the district produced 63 dong worth of export goods.

3. Centralized afforestation.

In order to have raw materials for the paper industry, Van Chan rapidly increased the planting linden and "mo" trees on land allocated for forestry production. Our district constructed a forestry site and a forestry corporation. In addition to harvesting the natural forests, the forestry site also has the task of planting forests; to date, it has planted more than 6,000 hectares of linden trees, "mo" trees, pine trees, etc.

The agro-forestry cooperatives have combined the raising of grain and perennial crops with afforestation in order to make efficient use of land, allow plants to support one another's development and protect both the soil and water sources.

Each cooperative has hills planted with forests and cares for these forests. The forests have become a new business of many cooperatives. Besides the natural forests, some cooperatives have linden forests, t'ung tree forests and so forth that have now reached the age at which they need to be thinned and have begun to supply products to the state. In 1979, the harvesting of forestry products resulted in 21,945 cubic meters of timber, 7,000 steres of firewood and hundreds of thousands of pieces of nua, tre and vau bamboo; in addition, more than 40 tons of dried t'ung seed were sold to the state.

In the advance from the monoculture of grain to self-sufficiency, the structure of the district's production has begun to be changed along the lines of centralizing and specializing the production of perennial industrial crops and forestry production, thereby creating increasingly stable sources of agricultural and forestry products. A portion of the labor force has been specialized and organized into specialized units. In 1975, the labor engaged in the production of grain constituted 87 percent of the total labor force in the Van Chan countryside, the labor engaged in the production of perennial industrial crops constituted 10 percent and the labor in forestry constituted 3 percent; by 1980, these percentages had changed: 80 percent of the labor force was engaged in grain production, 14 percent in the production of perennial industrial crops and 6 percent in forestry. Although the amount of labor engaged in grain production has declined, grain output has not declined.

In past years, the amount of agricultural and forestry products supplied by Van Chan to society was insignificant, consisting of only a small amount of timber, tre bamboo, nua bamboo and so forth, and gradually declining. In recent years, as a result of changing the allocation of crops, the quantity of tea supplied to the processing industry for exportation and domestic consumption has increased each year: between 1976 and 1980, the output of fresh tea buds increased by 3,000 tons. The percentage of commodities is constantly increasing. Van Chan is becoming one of the areas specializing in the production of tea and wood.

The arable land of Van Chan is beginning to be used in an efficient manner. At low-lying, relatively flat places, annual crops are grown, primarily grain and food product crops; on the sides of hills that have a small gradient, industrial crops, primarily tea, are being grown; on steeply graded land on the sides of mountains, trees, primarily linden and "mo" trees, have been planted, etc. On the basis of the land conditions and the terrain characteristics of the district, these three crops have been planted as companion crops and are growing well within each economic unit: the cooperatives, state farms and state forestry sites. As a result of this method of land use, economic returns are higher and the total amount of land under cultivation is also large. Moreover, this method also has a good impact in many areas, such as protecting the soil, combating erosion and maintaining the environment.

Van Chan has made good use of the investments and assistance of the state; on the other hand, it has mobilized the capabilities and capital of the agricultural cooperatives, tapped the spirit of self-reliance and socialist awareness of farmers and mobilized a rather large labor force to raise industrial crops and plant centralized forests, thereby bringing about a change in the allocation of crops.

4. The structure of industry and the handicraft trades has begun to be formed within the district.

The development of agriculture and forestry is the basis for the development of industry and the handicraft trades. With the installations that we have constructed, the enterprises put under the management of the district by the province and the enterprises managed by the province and the central level, the industrial structure within the district has taken shape and consists of three main production sectors:

The agricultural-forestry product processing sector consists of three plants processing black tea for exportation, which have a capacity of 9,200 tons (fresh tea buds), one lumber enterprise producing 2,000 cubic meters of wood per year and one enterprise, which has a capacity of 4,000 tons per year, that processes wheat and subsidiary food crops, mills rice, and makes galingale noodles, wine, candy and soysauce.

The electric power and mechanical engineering sector has met the majority of the energy needs of the processing industry and the need for electricity in everyday life.

There are seven small hydroelectric power plants and one machine enterprise producing ordinary tools and improved tools for agriculture and forestry within the district; each year, this enterprise produces more than 4,000 improved plows and harrows, 25,000 knives, grass rakes and sickles, more than 1,000 tea pruning knives and 300 improved vehicles and repairs from 50 to 80 small vehicles and machines.

The building materials sector consists of one plant producing 5 million bricks and tiles per year and 4,000 tons of lime per year and one wood furniture enterprise.

As regards consumer goods production, we have established handicraft cooperatives that produce leatherware, glassware, ceramicware, woven products, textiles, ready-madd clothing, etc. Industrial and handicraft production has developed to the point where the consumer goods produced by the district meet 30 percent of its needs. The output value of industry and the handicraft trades has constantly increased: in 1974, the output value of agriculture, forestry and industry was 14,552,000 dong, of which 3 million dong or 20.6 percent was produced by industry and the handicraft trades. In 1979, the output value of agriculture, forestry and industry was 31,370,000 dong, with the output value of industry and the handicraft trades constituting 32.4 percent or 10,386,000 dong.

5. Capital construction and communications-transportation.

In order to stimulate the development of agriculture, forestry and industry and support the communications and the lives of the people of the various nationalities within the district, we have concerned ourselves with guiding capital construction and communications-transportation. Every agro-forestry cooperative has a transportation unit and the district has established a building corporation to undertake the construction of communication projects, water conservancy projects, grade 4 housing, drying yards, warehouses and livestock pens for agriculture. In the past 5 years, we have constructed 11,860 square meters of grade 4 housing, more than 7,330 square meters of drying yards and 800 square meters of livestock pens; we have also constructed 73 kilometers of inter-village civilian roads, 11 suspension bridges and a number of small water conservancy projects. To date, eight villages have telephone switchboards and 28 of the 31 villages have automobile roads leading to them. The district has a mechanized transport unit, more than 400 buffalo and horse-carts and 2,000 improved vehicles; the pack-horse units of the 10 villages in the highland area have combined to establish a transportation force supporting the production, circulation and travel needs of the various nationalities within the district.

On the basis of the development of agriculture and forestry, industry was formed, and the activities of industry have created favorable conditions for the strong development of agriculture and forestry; this is most evident in the tea production sector in Van Chan. During the past 5 years, the amount of area under the cultivation of tea has increased two-fold and the quantity of fresh tea sold has increased by 50 percent. This development could not have occurred without the development of the tea processing industry. The changing economic structure has changed the structure of the labor force and the population. The state-operated industrial enterprises that have been constructed within the district have caused the number of industrial workers to increase and caused the urban population to grow: some 33,000 persons live in the four towns and at the five state farms and forestry sites. The structure of the labor force has also changed in the countryside; in 1975, the labor working in the small industry and handicraft sector at the agro-forestry cooperatives only constituted 5 percent of the total labor force of the cooperatives; by 1980, this figure had risen to 12 percent.

Although it is only beginning to be formed, the agro-forestry-industrial economic structure within the district has opened tremendous prospects for economic development, the improvement of living conditions and cultural development and brought about profound changes in many areas for the compatriots of the various nationalities within our district.

II. Caring for the Lives of the People of the Various Nationalities and Building the District into a Combat Ready Military Fortress

During the past 5 years, as a result of the development of production, the living conditions of the people within the district have undergone changes and gradually been improved. In 1976, the consumption of paddy was only 14 kilograms per month per person; in 1980, this figure was 20.5 kilograms per month per person. Our district has established a commerce corporation and more than 40 commerce stores and marketing cooperatives to serve the people. More than 80 percent of the households in the lowlying area have houses made of "ke" wood and have bicycles; some hamlets and mountain villages, such as Dai Lich, Nghia An, Vuc Tuan and so forth, have electric lighting. The district has 48 basic general schools, which include 20 level II schools, 2 level III schools, 1 highland school for teenagers and children, 1 work-study ethnic youth school, 1 level II + level III labor school and 5 supplementary education schools of the district. In 1980, 39,500 persons attended school, an average of one of every three persons in the district. Practically all cooperatives in the lowlying area have a child care center or child care group; in 1980, the 260 child care groups cared for some 6,000 children. Many cooperatives have organized lunches for children, for which parents pay nothing or only a portion. All villages have public health stations and maternity clinics; the district has two 300 bed hospitals, five clinics and one pharmacy, which concocts drugs from local pharmaceuticals. In addition to the district's museum, library and athletic field, several villages have libraries and tradition halls. The villages in the lowlying area have 46 literary and art units; the district has three movie units, one theater and one permanent outdoor movie. The district's wired radio system extends to the eight villages in the Nghia Lo lowlands.

In conjunction with productive labor and construction, Van Chan has initiated comprehensive local military activities and built the district into a combat ready military fortress. Van Chan was the immediate rear area of the frontline districts in Hoang Lien Son Province in the fight against the Chinese aggressor army. In recent years, the militia and self-defense forces have been developed in both size and quality: the number of persons in the self-defense force increased from 9 percent of the population in 1976 to 14 percent in 1979; more than 62 percent of party members have joined the militia and self-defense forces; all forces have been organized into suitable combat units. All enterprises, state farms, forestry sites and agencies have established strong self-defense battalion and companies. In the villages that have militia platoons and companies, militia forces receive training each year, are fully equipped with weapons and have the ability to conduct good mobile operations and fight well. The commands of the village military units and the district military unit have been strengthed and all villages, zones, state farms and forestry sites have specific combat plans. In addition, plans have been adopted for combat coordination among main force units, local troops and self-defense and militia forces within each area, each cluster and throughout the entire district.

The basic organizations of the party, the government and the mass organizations have been strengthened. The party committees on the various echelons within the district truly control and lead the armed forces; every district party member personally guides one village; every member of the standing committee of the district party committee leads a combat cluster. Nearly 100 cadres of the district have been sent to strengthen installations, one-third of them going to installations in the highlands, in order to mobilize the people in production and help installations organize local armed forces. As a result, when the Beijing reactionaries unleashed the war on the border in 1979, order and security within the district were firmly maintained. Van Chan promptly reinforced the frontline with thousands of new soldiers, received tens of thousands of persons who were evacuated to the rear and evacuated hundreds of wounded soldiers from the frontlines. During the same period of time, our district mobilized more than 35,000 mandays to support the frontlines and, in a short period of time, completed the construction of 75 kilometers of trenches and various combat clusters within the district.

The youths of the various nationalities have eagerly fulfilled their military obligation: since 1976, we have exceeded the plan norms in the various phases of induction by 2 to 6 percent. The rear area policies have been implemented well.

Upholding the revolutionary tradition of the locality and by closely linking the buildup of the armed forces to the production and business units and coordinating economic development with the strengthening of national defense potentials, Van Chan is building the district into a powerful and steadfast, combat ready military fortress that will insure victory over every act of aggression of the Chinese expansionists.

In the process of building the agro-forestry-industrial economic structure within the district, Van Chan has achieved initial results; generally speaking, however, economic development is neither uniform nor balanced. In the coming period, we must give our attention to overcoming the following weaknesses:

1. Animal husbandry, especially livestock production, has not been given appropriate attention. The cooperatives have not increased their raising of the species of large livestock, consequently, the draft buffalo herd was smaller in 1979 than in 1975. The size of the collective hog herd has not increased. The failure of livestock production to develop has affected crop production due to the shortage of fertilizer for the intensive cultivation of rice and tea.

2. Industry and the handicraft trades, especially the handicraft trades within the agricultural cooperatives, have developed slowly. Despite the very large potentials

and very large requirements, the existing sources of raw materials in the locality have not been developed well. In order to put a large amount of area under the cultivation of cassava within the collective economy, we must have implements for processing cassava that do not break after harvesting; this is the only way to incorporate cassava in the grain consumed by humans and support collective hog production. At present, however, Van Chan has no cassava processing industry. The quantity of cassava processed within cooperative member households is not significant.

3. The rate of afforestation is slow, the protection of the forests is still marked by many shortcomings and forest fires, although they have been reduced in number, still occur on an annual basis, thus affecting forest resources and the regrowth of forests.

4. The continuing shortage of grain is the main obstacle at this time to the effort to broaden the division of social labor and provide more labor for the production of raw materials for industry and industrial production. Self-sufficiency in grain has still not been achieved within the district; each year, the state must still supply the district with more than 3,500 tons.

Upholding their revolutionary tradition, the party organization and the people of the various nationalities in Van Chan District will be determined to overcome the weaknesses mentioned above. On the other hand, it is suggested that the various levels and sectors provide additional guidance and assistance to us in the effort to build the agro-forestry-industrial structure within the district so that we can contribute more and more to industrialization.

THE STRUGGLE ON THE FRONT OF CULTURE, LITERATURE AND ART IN THE PERIOD OF TRANSITION

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 9, Sep 81 pp 38-42 and 64

[Article by Ha Xuan Truong]

[Text] Our entire country is in the initial stage of the period of transition to socialism; in the South, five different economic segments still exist and society is still being heavily influenced by U.S. neo-colonialism. The struggle to resolve the question of "who defeats whom" in the period of transition between socialism and capitalism, together with all the other remnants of neo-colonialism that are always opposing and fighting socialist transformation and socialist construction, is a fierce struggle. Culture, literature and art are a front, one that reflects this struggle, and, due to its characteristics, the struggle on the front of culture, literature and art is a prolonged struggle that assumes many different shapes and forms. The ideological resistance is the sharpest and strongest resistance.

The struggle against the decadent and reactionary culture, literature and art continues to be an intense struggle in Ho Chi Minh City and a number of other localities and is one aspect of the struggle to resolve the question of "who defeats whom" on the front of culture, literature and art in our country.

Since 30 April 1975, together with the great victory won in liberating all of the South and together with the tremendous political prestige of the party and the dictatorship of the proletariat state, two cultures, two literatures and two arts have existed side by side: socialist culture, literature and art have been established in the North and exerted much influence in the liberated areas of the South in past years and the U.S. neo-colonialist culture, literature and art which dominated for many years in the South, especially in the cities. Ever since that day, the struggle to abolish the harmful vestiges of neo-colonialist culture, literature and art has been carried out at the same time as the effort to transform and establish socialist culture, literature and art. The private theatrical companies and singing groups have been organized into collective organizations under the guidance of the cultural agencies of the state. All movie films of the U.S.-puppet period have been confiscated and replaced with Vietnamese films and films from the fraternal socialist countries. The movie houses and printing plants have gradually been placed under the management of the state. The circulation of decadent and reactionary books and magazines is prohibited. Our press, radio stations and wired radio networks have deeply analyzed the reactionary viewpoints and exposed the sinister schemes of the U.S. imperialists to use culture, literature and art as tools of enslavement and demagoguery. Scientific conferences and forums on neo-colonialist culture have been held. While carrying out transformation, we have launched and developed activities in socialist culture, literature and art. Although not many clubs and cultural halls have been established, they have made a positive contribution to creating a wholesome atmosphere for cultural activities. Film festivals, theatrical performances and professional and mass musical performances have provided occasions for encouraging art activities to develop along socialist lines. In summary, the cultural achievements we have recorded in the South in the past 6 years have not been small. These achievements have begun to change the face of culture in the southern provinces and gradually abolish the remnants of the neo-colonialist culture.

However, facts show that the struggle to combat the decadent and reactionary culture and establish the new culture, literature and art is not only being carried out in the South. This struggle is being waged throughout the country; of course, the intensity of the struggle varies from place to place and there are differences between the South and the North. The commercial tendency in bourgeois art has crept into socialist art. Under various forms of collectives, many singing groups still seek to "please their patrons" as the singing groups of past years did. The decadent and reactionary culture has even emerged in Hanoi, in the port city, etc. Some of our core cadres in the field of art have become decadent; although this number is very small, it is a serious phenomenon.

While we have failed to meet many of the requirements involved in establishing socialist culture, literature and art, bourgeois and neo-colonialist culture, literature and art have continued to attack us. In some areas, they have pushed us back and, in other areas, they have created confusion for us. The danger is that our enemies are using our forms of activity and our people to serve their sinister scheme. Some comrades and some localities think that fighting the decadent and reactionary culture is the work of the southern provinces or only the work of Ho Chi Minh City. This is a mistaken viewpoint. We must clearly realize that the poisons of bourgeois culture and the resurrected remnants of the neo-colonialist and feudal culture are being used by our enemy to sabotage us in many cities and towns and in some of the rural areas in both the North and the South. Ideological sabotage, sabotage in the form of culture, literature and art have become the most important and insidious aspect of the comprehensive war of sabotage being waged by the U.S. imperialists and the Beijing expansionists against our country. The struggle to resolve the question of "who defeats whom" between socialism and capitalism in the period of transition in the field of culture, literature and art is a fierce and extremely complex struggle in view of the specific historic circumstances of our country and is a struggle to win each person, each soul.

The present struggle against the reactionary and decadent culture, literature and art raises three matters: 1) the struggle to resolve the question of "who defeats whom" in the field of culture, literature and art in the period of transition is a law; 2) our old enemy, who is now in collusion with our new enemy and has not abandoned the scheme of invading and occupying our country, is using culture, literature and art to sabotage the effort of our people to protect the fatherland and build socialism;

3) the leadership of the party and the management of the dictatorship of the proletariat state on the front of culture, literature and art must, as a result, become increasingly responsive and be provided on a regular basis.

The law of culture, literature and art in the period of transition in our country is the law of the struggle between the two ways of life, between socialist culture and capitalist culture under the specific circumstances of our country, a country that experienced two long and extremely fierce wars of resistance, a country that then had to fight two new wars, a country that is always being surrounded, attacked and undermined by its enemies. In an economic and social situation such as the one that exists now, especially in the South, where the base still exists for the exploiting classes, where the "free" market is still widespread and where ordinary tastes still exist, it is difficult to avoid the resurgence and emergence of negative phenomena in culture, literature and art. The problem we face is how to limit these negative phenomena, these remnants of bourgeois and fuedal culture to the lowest level possible in order to eventually totally abolish them and not allow them to become tendencies that could overpower the socialist tendency, which is still not strong throughout the country and is still new in the South. In this struggle, the emergence of "two-sided phenomena" (or multi-sided) is easily understood. A sincere play, film, song or even a sentence can be used in a distorted manner; such distortion is inevitable when the work of art is vague or lacks party spirit. The enemy is always looking for every way to turn what is ours into something that is theirs as well as turn our people into people who work for them. In order to win victory for the socialist culture, literature and art, we must mobilize every force to concentrate its efforts on building the new culture, literature and art in the fields of creative works, performances, theory, criticism, training and the organization of management. On the other hand, we must wage a determined struggle against every negative tendency and phenomenon, limit and eventually abolish the conditions that give rise to these negative phenomena. This work is not the work of one sector, but is work that must be performed by many sectors, by all of society in a steadfast and long-range manner. Recently, in Ho Chi Minh City and a number of other places, some literary and art activities, such as the "youth music movement" and the "political songs" movement, have been misdirected and many decadent cultural, literary and artistic phenomena have been reborn under many "legitimate" and illegitimate forms. The causes of this situation are our lack of vigilance and our failure to realize the arduous, complex nature of the struggle on the front of culture, literature and art in the period of transition to socialism. The recent policies and measures adopted by the Ho Chi Minh City Communist Party Committee to combat the decadent and reactionary culture are both correct and necessary. The speeches by Vo Van Kiet, the secretary of the City Party Committee, have had the effect of reorienting the guidelines of and awakening the party organization and cultural, literary and artistic circles which, over the past 2 years and more, have been somewhat lax in the struggle on the front of culture, literature and art; some persons have even divorced themselves from the spirit of the party and the people in their work in the field of culture, literature and art.

Also in the recent past, some specialized cadres, failing to grasp the functions of culture, literature and art of teaching ideology and aesthetics and training the new man and failing to correctly understand the action taken to broaden business activities in cultural, literary and art activities, have allowed pure business and economic thinking to overpower the objectives in the management of culture. The Ho Chi Minh City Party Committee has adopted specific policies, such as providing incentive for the production of art products for exportation, supplying to publishing agencies hundreds of tons of paper for the printing of books for teenagers and children and strongly investing (in the nature of subsidies) in creative activities. Regardless of the circumstances, all cultural, literary and artistic work must be placed under the leadership of the party, must take one direction, that is, must be socialist culture, literature and art of a national nature that deeply reflects the spirit of the party and the people. Of course, in order to develop such a culture, it is necessary to struggle and build for a long period of time.

The struggle on the front of culture, literature and art does not only occur between ourselves and the enemy, but also occurs among the people; it lies within the category of revolutionary ideology. This characteristic is very evident under the present conditions of our country. If there is a characteristic of the struggle on the front of culture, literature and art in our country at this time, it is the struggle against the acts of sabotage being conducted by the U.S. imperialists in collaboration with the Beijing expansionists. They are an enemy who has much experience, are a wicked and malicious enemy who combines various forms of overt and covert activities, legal and quasilegal activities and uses their reactionary and decadent culture, literature and art to oppose our people's socialist construction while scheming to cause the Vietnam Communist Party, which is the factor that determines the victories of the Vietnamese revolution, to lose its prestige. On the basis of the remnants of the neo-colonialist culture that they established during their period of rule in the South (which include tastes, lifestyle and so forth), they have rallied former lackeys and established new reactionary forces both "overseas" and within our country. Materials confiscated by us in the past year verify how malicious their schemes and actions are. They include piles of leaflets and tens of thousands of psychological warfare letters of all types brought to our country in every possible way. They include poems, satirical folk verses, jokes and the "Vietnamese society" shows on the western radio networks, which specialize in distorting and discrediting Vietnam. They include various forms of "newsletters" and "letters of guarantee" along with seasickness pills in order to encourage and entice persons to flee overseas. They include thousands, tens of thousands of provocative, exciting music tapes from the West and "songs" by emigrees that have been mass produced, sold and spread to our country, especially Ho Chi Minh City. They include hundreds of counters and stands that store and rent reactionary, decadent books, hundreds of thousands of which have been confiscated by us; hundreds of cases involving pornographic films, hundreds of coffee houses that have been warned, closed or prosecuted for disseminating decadent cultural products and spreading the decadent lifestyle; volumes of reactionary poems destined to be secretly shipped from our country to cause a stir overseas; "classes" and "music units" organized for sinister purposes, etc. All of these attempts to discredit, to provoke, to rally forces against socialism in Vietnam, although they have been modernized in terms of their contents and technical aspects, bear the "fingerprints" of the U.S. imperialists and international reactionaries. Nowadays, they are employing many more sophisticated means: a jacket, a teeshirt can also be a means for spreading the thinking of "worshipping the United States," of "admiring the United

States," a means for stimulating a return to the old style of life. A notebook, a calendar, a piece of paper used to wrap merchandise are also used by them as a means of propaganda. Nothing they do surprises us. Many of our works of art, especially works designed to criticize the negative aspects of our society, have been used by them as two sided weapons: they have nullified the positive effect of our legitimate and necessary criticism while distorting and turning this criticism into opposition against us. Therefore, we must expose their tricks and, if necessary, severely punish those who serve as their lackeys, those who unconsciously support them. However, the best measures to be employed in the struggle on the front of culture, literature and art are education and persuasion designed to raise the masses' level of awareness of ideals, of building socialism by many different means, thereby generating correct public opinion and a sense of voluntary action among the people--especially among youths and intellectuals--to work together to establish the new, socialist culture, literature and art and not tolerate any form of degeneration, decadence or reactionary behavior. Launching individual phases of struggle is necessary; however, the measures employed on the front of culture, literature and art primarily deal with matters in depth in a determined but patient manner that has enlightenment as its objective. We must take the initiative and adopt a plan for waging the struggle in conjunction with building, building what we want in a correct manner that complies with laws is the basis for victory in the struggle.

The general laws as well as the laws of each field of activity in the period of transition in our country have not been fully studied and the majority of new policies are designed to meet immediate requirements. Work on the front of culture, literature and art is long-range, strategic work. Several decades are needed to create a new style of cultural life, a new cultural psychology, a new literature and art. And, during this period of time, negative phenomena can still arise and some of these phenomena will emerge time and time again because their origins lie in the habits, attitudes, lifestyle and so forth of the old society and because the capitalist world is always looking for ways to attack. In view of our country's circumstances, acts of sabotage by the U.S. imperialists and the Beijing expansionists are a constant factor. If we do not firmly maintain the dictatorship of the proletariat on this front, if we are not vigilant against their insidious schemes, the remnants of the neo-colonialist culture and everything else that is backward will become a force supporting their reactionary schemes, a force that will not only seriously undermine social life, but also seriously harm the political life of the country. The U.S. imperialists and the Chinese reactionaries are unwilling to accept defeat. By many methods, including methods involving culture, literature and art, they are always counter-attacking us, attacking our new social order, attacking the persons who are building this social order. The struggle against the decadent, reactionary culture that is now taking place in Ho Chi Minh City and a number of other places is a struggle of a cultural and ideological nature as well as a struggle of a distinct political nature. As a result, it is necessary to understand the close relationship between the schemes of the enemy and that which is backward and decadent; at the same time, however, we must precisely define that which is caused by the enemy and that which is backward and decadent in society.

We face the requirements of broadening the scope of creative activities as well as the appreciation of art and improving the methods of artistic activities. The line of our party on culture, literature and art encourages every attempt to find and support the new and the persons who guide the implementation of this line are persons who cultivate creativity and nurture and support the formation and development of the new; however, the question we face is: what is the new? In culture and art, the basic issue is not whether something is old or new, but whether it meets the educational and aesthetic needs of the people. The issue is not what the origin of something is, but where something is leading us and what it does to broaden our knowledge and intelligence, to bolster our feelings and character. The issue is not whether something is suitable or unsuitable to our people in terms of whether they will buy it or not, but what something provides, what it contributes to the development of the culture, literature and art of the nation of Vietnam.

Finally, our struggle against the decadent, reactionary culture, literature and art at this time is also part of the overall struggle between the socialist system and the capitalist system in a decisive period: capitalism, led by the U.S. imperialists, who are collaborating with the Beijing expansionists and the other reactionary powers, is looking for ways to win back the positions it has lost and regain its position as international gendarme. Due to our specific historic circumstances, our country is about one-half century behind the fraternal socialist countries. While the fraternal countries have entered the stage of building developed socialism, Vietnam is still in the initial stage of the period of transition. The laws of culture are not the same as economic laws; however, a country's level of cultural development cannot be separated from its economic and social situation. We must resolve the problems and perform the jobs that we have in the period of transition while coordinating on an international scale in order to contend with practically all of the problems being encountered by the fraternal socialist countries, which have achieved a higher level of development, in the struggle against the bourgeois culture, against the cultural schemes of the imperialists and other reactionary powers. This makes the struggle on the front of culture, literature and art during the period of transition in our country more complex and decisive and makes it even more necessary for each of us to heighten our party spirit, zeal and skills.

THE STRUGGLE ON THE CULTURAL AND IDEOLOGICAL FRONT IN HO CHI MINH CITY

BK310940 Hanoi TAP CHI CONG SAN in Vietnamese No 9, Sep 81 pp 43-47

[Article by Truong Quoc Minh--translation previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 213, 4 Nov 81, pp K6-K10]

[Text] The struggle to oppose reactionary and decadent culture and to build a new culture in Ho Chi Minh City has recently taken place in a lively and widespread manner.

The various profoundly significant addresses (footnote: "Determination To Win on the Cultural and Ideological Front", Ho Chi Minh City Publishing House, May 1981) of Comrade Vo Van Kiet, secretary of the city party committee, on this occasion have expounded the importance, complexity and fierceness of the struggle on the cultural and ideological front in a populous and recently liberated area.

The general public in Ho Chi Minh City and throughout the country has voiced its sympathy and great support for this timely mopping-up operation, considering it a response to the legitimate and urgent demands of the people of all strata who want to eliminate all cultural rubbish left by the former society in order to build a healthy cultural and spiritual life in this city, abundant in glorious traditions, which has the honor of bearing beloved Uncle Ho's name.

The recent restoration of some neocolonialist cultural activities in Ho Chi Minh City has been strongly condemned by the general public. The people in various city wards and subwards have actively cooperated with the mass organizations and administration to detect and wipe out all dens dealing in indecent culture. Thousands of cases of violations have been investigated and dealt with severely. A large volume of evidence including both new and old "cultural work" of the imperialists and their reactionary henchmen has been seized. Ruffians and criminal cultural dealers have been gradually prosecuted before the people's court to be duly punished.

Through this struggle, all people have a chance to understand more clearly the long-term harmful effect of neocolonialist culture. By the same token, they have realized the need to constantly heighten their vigilance against the enemy plots and tricks in the cultural and artistic field.

Realities have shown that both new and old colonialism together with 30 years of its successive wars of aggression in the south have bequeathed the former Saigon-Gia Dinh City -- now Ho Chi Minh City -- extremely serious consequences in all fields. Apart from untold difficulties in production and economic life are countless social evils generated by the extremely insidious "cultural" policies of the imperialists and their henchmen. The Saigon and Western press formerly estimated that the number of drug addicts, ruffians, robbers, thieves, prostitutes, orphans and "outcasts" had been at one time up to half a million.

In the past few years, the compassionate and conversional policy of educational reform adopted by the city party organization and administration has helped large numbers of the former regime's victims extricate themselves from the temptations of neocolonialism, giving them a new, significant life beneficial to the society. Under the new socialist regime, the establishment and development of a new culture has begun to give some good results definitely changing the cultural and moral lives of the city people.

Obviously, it is impossible to liquidate overnight all the lingering harmful influences of the neocolonialist legacy which deeply impregnated a segment of the people.

Through the years of a long war, contempt of labor, dependence on society, depreciation of human dignity and disregard of morality has become the familiar way of thinking and living for a class of city people who used to live on dollars. The psychology of admiring and loving foreign and weird things and manners, and of striving to satisfy base sensual feelings was imposed on the people, especially youths. Selfish individualism and a depraved hedonistic life was encouraged and developed in the society. Even more harmful was that patriotism and national pride gradually withered at a time when numerous people, seriously affected by the "psychological warfare" poison, admired and feared imperialist power.

Although the enemy's ruling apparatus has been smashed, its cultural poison still lingers in the new society and continues to destroy the thinking and feeling of those who still miss the lifestyle under the old regime. It always bides its time to spread out its influence among the broad masses.

Failing to correctly realize the risk, the agencies in charge of cultural organization and management merely neglected their struggle on the cultural and artistic front for only a short period, and backward and decadent culture has already reared its head gain under several forms. At first it appeared under concealed, disguised and half overt and half covert forms. Then it gradually came out into the open and started to hold sway in disregard of the administration's regulations.

Born of the lively mass movement of healthy literature and arts, the "youth song" troupes have gradually deviated and become prey to the cultural dealers by copying the crazy types of former U.S.-puppet "pop songs." While the people are engaging in the struggle against the expansionistic threat from the Beijing reactionaries and are toiling to build the country, the musical tunes and words of some new "compositions" have stirred up soft and romantic feelings in youth, creating a psychology of uncertainty and unreality which does not conform to facts of life.

It is not accidental that the golden musical tapes of the former regime as well as those from "overseas" of the Vietnamese reactionaries in exile and the latest Western jazz music have flooded the city in tens of thousands of mushrooming coffee shops. Many reactionary types of decadent books, banned from circulation for a long time, have now appeared in book stalls.

At the same time, from four to five million surreptitiously printed books of nonsense have infiltrated families and schools, aiming at teenagers and children, let alone hundreds of types of political, cultural, religious and fortune-telling books rife with reactionary characters, depravation, superstition and mysteries which have been openly mailed from the imperialist and captalist countries. Blue movies and pornographic photos have also been traded by unscrupulous people. This situation has quickly led to the emergence and development of brothels and gangs. Many youths have chosen to lead a life of debauchery, refusing to fulfill their obligations to the country. Finally, inveigled by bad people, they have fled aboard.

We cannot indeed say that the recent rebirth of decadent culture has been masterminded merely by some profit-seeking merchants, involving no imperialists nor international reactionaries. Neither can we say of course that all these dirty operations have been organized by the enemy. Nevertheless, we must realize that in the cultural and social fields, the imperialists -- especially the Americans and the Chinese expansionists together with their reactionary lackeys -- can easily cooperate with those unscrupulous cultural dealers to sabotage us and seek profits.

Unfortunately, there still are many people who have failed to correctly assess the enemy's cultural and artistic plots and acts in its general war against the socialist revolution in our country.

Noteworthy is that at a time when all types of enemies are coordinating with one another to attack us in several ways and their noxious culture is taking root, some of our cadres and party members have become seriously depraved, degenerate and deviant. They have run after illicit money by cooperating with the bad people to revive and deal in all forms of base and decadent culture. Bought off by money and girls, some of them have protected and cooperated with the ruffians and liberal cultural dealers, trampling on the cultural and moral values of the nation. They must be indeed severely punished for their criminal acts.

The struggle on the cultural and ideological front that was recently launched in Ho Chi Minh City rightly reflects the general public's indignation at all forms of reactionary and decadent culture.

The working class and the laboring people in the city -- the people who day and night are producing material and moral wealth for society -- resolve not to accept a situation in which some people indulge themselves in debauchery, thereby causing trouble for society. The people of all strata, especially old people and women who are concerned with their children's happiness and future, have strongly voiced their protests, requesting the administration to take action to eradicate this harmful cultural legacy of the enemy.

This very fierce struggle on the cultural and ideological front has awakened frivolous and unrealistic people, making them vigilant against the dangerous and perfidious cultural activities of all forces hostile to our nation.

It is regrettable that some people who consider themselves as "culturally knowledgeable" still adopt an indifferent attitude by staying outside of the struggle to wipe out neocolonialist culture. Not only have they refused to cooperate with the masses in the struggle but at times they have said something very unpleasant to the ears.

At the beginning, they said that the cultural vestiges of the former society were neither so great and harmful nor so terrible that such a noisy mop-up operation should be conducted. To do so was merely "making a mountain out of a molehill." They even went so far as to sow suspicion and doubt by asking: "Is the policy of cultural struggle aimed at distracting the people from the present economic difficulties?" Faced with undeniable proof, a large mass of reactionary decadent cultural works which have been seized, they changed their tune, ridiculing the revolution as powerless in cleaning up the cultural rubbish of the former society. Even though the struggle was aimed at the imperialists and their reactionary henchmen, these people seemed reluctant to support the struggle and wanted to attack other targets.

It is really unreasonable to assert that we cannot use strong measures in this struggle to suppress and punish those professional poisoners and saboteurs of the people's cultural and moral lives and that we must deal with them in a "cultural and delicate manner."

While the general public should have been made to understand this matter thoroughly and urged to condemn the noxious neocolonialist culture, some people have criticized revolutionary culture and arts as uninspiring, unattractive and unfashioned, ridiculing our artistic shows of national character as conservative and inopportune. There have been scattered claims for freedom to enjoy any kind of cultural work. Some of the claimants are so immoral as to say: "Better to love a prostitute (meaning capitalist culture) than a shrew (meaning the revolutionary culture).

These erroneous views and attitudes only benefit the reactionary forces hostile to the revolution in our country. They are harmful to our people's revolutionary struggle.

Although these erroneous views and attitudes are quite rare, they clearly indicate the complexity of the struggle on the cultural and ideological front. They must be criticized and corrected. Nevertheless, we should first clearly understand what V.I. Lenin used to say:

"In general, there will be shallow people who, out of frivolity or blind habits, want to protect the viewpoints circulated in a given capitalist circle.

"No, in politics, the important question does not involve those who directly protecting which viewpoints but those who will benefit from such views or such proposals." (Footnote: Lenin: "Cultural and Literary Discussion," Van Hoc Publishing House, Hanoi, 1977, page 90)

The struggle on the cultural and ideological front that was recently launched in Ho Chi Minh City is only a first step. Although a heap of rotten "cultural" rubbish has been wiped out, the city is still not clean. At present, those unscrupulous people dealing in decadent and reactionary culture have shrunk from their open activities and shifted to clandestine operations, using perfidious tricks of camouflage and disguise. Consequently, the struggle must continue. The responsible agencies must rely on the people's forces to detect, wipe out and eradicate the remaining dens of neocolonialist culture.

This struggle is very complicated. Much time is required to get rid of all the cultural and ideological influence of the former ruling regime over the people completely. The struggle is even harder and more fierce in Ho Chi Minh City. The city is not only a place where all kinds of reactionary viewpoints and ideologies, as well as the backward and decadent lifestyle of colonialists, imperialists and their ruling lackeys prevailed for decades, but is also a vital target at which the enemy who is trying to oppose the revolution in our country is taking careful aim. We understand that not only Ho Chi Minh City alone but the entire country is responsible for checking and defeating the enemy's cultural and artistic plots and tricks.

Through the actual struggle our people have realized all the more clearly the unbelievably harmful effects of neocolonialist culture. The enemy's cultural poison in peacetime is very dangerous as it gradually erodes, putrefies and completely destroys the human soul in a very insidious manner. The people are very indignant at and hateful of the cruel acts perpetrated by the cultural criminals. In our fierce struggle against the enemy we should definitely not think of granting any leniency to those who have intentionally carried out enemy plots to intensively attack us in the cultural and ideological field.

The present struggle on the cultural and ideological front in Ho Chi Minh City is clearly a relentless class struggle between the revolution and counterrevolution and between wholesome progress and degeneration. It is also the struggle between socialism and capitalism.

In this fierce struggle, no one can stay in the middle and nurture the illusion of seeking a third way to reconcile the differences between two antagonistic ideologies. It must be asserted that culture and arts in this country must necessarily be based on a Marxist-Leninist stand and view and must follow the line of the VCP. Moreover, no other culture and/or art must be allowed to impregnate the moral life of our people.

More than ever before, the socialist revolution requires that all of our cadres, party members and patriotic people fully realize their role in and responsibility to the struggle on the cultural and ideological front by resolutely opposing all unhealthy cultural manifestations and by strenuously protecting and developing the cultural and moral values of our nation.

THE VICTORY OF MARXISM-LENINISM IN THE SCIENCE OF HISTORY OF VIETNAM

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 9, Sep 81 pp 48-54

[Article by Van Tao]

[Text] The nation of Vietnam has a glorious history of thousands of years of struggling to build and defend the country and a long standing, developed science of history.(1) However, the science of history of Vietnam only became a genuine science of history with the birth of the party of the working class and Marxism-Leninism.

In fact, the birth of Marxism-Leninism brought to an end the period of viewpoints that considered history to merely be the recording of history, that is, the recording of historic events. The task of the Marxist science of history is to deeply research and discover, on the basis of the viewpoints of dialectical materials and historical materialism, the essence, the laws of development of history and to gradually fill in the holes in our understanding of history in order to bring us increasingly close to historical truth with a view toward reconstructing the true face of the history of Vietnam, which was distorted by the feudalists and the imperialists, and discovering the essence of the traditions of the nation and the victories and experiences in the process of struggling to build and defend the country, thereby helping to mold the scientific world view and revolutionary philosophy of life, cultivate the patriotism and self-reliance and intensify the struggle of our people today to build and defend the country.

On the basis of clearly understanding this task and these work guidelines, the science of history of Vietnam has, under the leadership of the party, coordinated with related sectors in organizing the research of basic issues in the history of Vietnam and has recorded achievements worthy of pride.

In coordination with the other fields of science, the science of history of Vietnam has researched and verified the origins of the nation of Vietnam and proven that the age of the Hung Kings was an age that actually existed in Vietnamese history.

Archeological scholars have excavated, researched and discovered many cultures that had their origin and developed continuously in North Vietnam during the first and second millennia B.C.

Scholars in ethnology have discovered a system of ancient customs that has existed since before the birth of Christ to the present day among ethnic Vietnamese.

Scholars in anthropology have, on the basis of information derived from the skeletons and skulls of ancient persons in Vietnam in the New Stone Age and the Bronze Age, verified the very early existence of natives: "Indonesians," "South Asians," "Ancient Indochinese" or "the predecessors of South Asians"(although they are called by different names).

Scholars in linguistics have recorded the existence of a local language, the "early Viet-Muong" language, which developed into the Viet-Muong language in North Vietnam during the periods preceding and following the birth of Christ.

Folklore scholars have recorded a system of legends on the origins of the Vietnamese, legends that were born locally and long ago.

And, historians have verified the natural, close relationship between the community of Vietnamese in the early centuries following the birth of Christ and the community of Vietnamese in North Vietnam before the birth of Christ and verified that the waves of migration of Chinese into Vietnam primarily occurred only after the birth of Christ.

All of this information helps to prove that the origin of the Vietnamese nation was primarily in the indigenous population of long ago and included the brilliant age of the Hung Kings and the Red River civilization, the symbol of which was the Dong Son culture, and helps to reject the mistaken theories that the Vietnamese migrated from China or from the Pacific islands, from Malaysia, etc.

The formation of the nation of Vietnam has been the concern of many scholars. The viewpoint endorsed by most scholars is that the nation of Vietnam formed at a very early date, before the emergence of capitalism, formed with a unified territory, a unified Vietnamese language, a unified Vietnamese culture and a unified and strong Vietnamese national spirit characterized by deep patriotism and an ardent love of the race. All of this proves that the country of Vietnam was one, the nation of Vietnam was one. The only question that remains is that of when the nation was formed. On the basis of the concept of nation presented by Marx and Engels, some persons maintain that the nation of Vietnam could have formed in the age of the Hung Kings. Some persons place the formation of the nation in the 10th and 11th Centuries. Other persons place it in the 15th Century. The opinion that the nation of Vietnam formed in the 18th Century has been revised with the result that the 18th Century is considered to be the true period of formation, while the beginning of this formation can be placed earlier, in the 10th, 11th Centuries or later.

The formation of the socialist nation of Vietnam has also begun to be researched. The first factor concerning which there is agreement is that the socialist nation of Vietnam began to form in 1945; here, the factors of territory, language, culture, economy and so forth have been examined in an objective and cautious manner.

The tradition of military struggle against foreign aggression in the history of the nation of Vietnam is the field of research that has recorded the most achievements.

Some 30 projects have been printed in book form and more than 700 research dissertations have been published. These projects have basically had the purpose of presenting the historic position of this tradition, considering it to be one of the important factors in the formation of the nation of Vietnam, the formation of the central, Vietnamese feudal state (besides the factor of harnessing water), the formation of the spirit of national unity and the unification of the country. This tradition has been inherited and increasingly developed upon in the continuity of history, from the strategy and tactics in the struggle against foreign aggression of our forefathers to the present day, from the victory of the war of resistance against the 500,000 troops of the Tan aggressor army in the 3rd Century B.C. to the recent war of resistance against the Chinese expansionist aggressors.

All of these research projects have made a contribution to affirming the national, scientific and revolutionary nature of Vietnamese military tradition in the course of its brilliant development.

Special projects in the economic and cultural history of Vietnam have also begun to be researched. As regards the various socio-economic forms in Vietnam, there are many persons who maintain that the classical system of slave ownership (the European style) never existed in Vietnam, even though a special form of slavery, the servant, did exist.

Practically all scholars in Vietnamese history have confirmed that the stage of development of the feudal system in Vietnam began during the period of the Dai Viet civilization in the 10th, 11th Centuries and later and was characterized by the virulent development of the sense of nationhood and economic, cultural and social development together with brilliant feats of arms against foreign aggression. However, exactly when the feudalization of Vietnamese society began and the period of time that marked the decline of this system are still subjects of debate. In addition. there are some scholars who maintain that research should be based on the "Asian mode of production" rather than the "feudal" concept because feudalism is more western in nature than oriental.

The colonial, semi-feudal form of economy in Vietnam is a matter now being debated. Some persons maintain that it is a colonial-feudal economy, others call it a colonial-semi-feudal economy and still others maintain that it should only be called a colonial economy because it was the dominant form and was part of the capitalist economic form in the stage of imperialism.

Many persons are also giving attention to the people's democratic economic system. The question being raised is whether this system lies within the category of the socialist economic form or is a special intermediary form of economy.

The history of the Vietnamese revolution under the leadership of the Vietnamese working class is a field of research that is absorbing the intelligence of the mass of scholars in Vietnamese history.

As the Vietnamese revolution wins more victories, the need to understand the working class of Vietnam and its position, role and historic mission among the working people becomes increasingly large. The working class is the class leading the revolution and is one of the two main force armies of the revolution.

Many historians in our country have cooperated with a number of foreign historians, especially Soviet historians, to research this matter and have clarified a number of matters regarding the birth of the Vietnamese working class. Practically all of them confirm that the modern Vietnamese industrial worker emerged at the end of the 19th Century; however, the Vietnamese working class had to experience a process that extended from the end of the 19th Century to the start of the 20th Century in order to become a "class of itself" and then rapidly became a "class acting for itself" beginning in the years following World War I; and, it was not until 1930, when the party of the working class was born, that it fully became a class acting for itself.

Immediately after its establishment, the party of the Vietnamese working class set forth the correct revolutionary line of brandishing the banners of national independence and socialism. The science of history of Vietnam helped to clarify the relationship between the characteristics of the formation of the party and the origin of the line of the Vietnamese revolution as well as the victories resulting from this correct and creative line.

In the process of clarifying the position, the role and the historic mission of the Vietnamese working class in its leadership of the Vietnamese revolution through its vanguard party, the science of history of Vietnam has never separated this historic event from the position and role of the great President Ho Chi Minh, the wise leader of the class and, at the same time, the supreme leader of the nation. He correctly accepted the essence of Marxism-Leninism at an early date, became our first communist, participated in founding the French Communist Party, worked tirelessly in the international communist and worker movement and founded the genuine Marxist-Leninist party of the Vietnamese working class. The vanguard revolutionary party founded and forged by him has led the Vietnamese to victory after victory; at the same time, it has also contributed to stimulating the advance of the three revolutionary currents in our times. New advances are recorded in the research of President Ho each year; however, his career and personality are still a storehouse of extremely rich material for our country's historians to use in order to further clarify the stages of Vietnamese revolutionary history from the time that the party and President Ho came on the scene.

Ever since the party was established as the Indochina Communist Party and began leading the revolution, the history of Vietnam has turned a new page. Revolutionary movements led by the Vietnamese proletariat in this stage of history have not only been the subjects of research in the field of the nation's history, but also the subject of research of party history and the history of the Vietnamese people's army.

On the basis of the principle of Marxism-Leninism that the masses write their own history, the science of history of Vietnam, which consists of the fields of study mentioned above, has focused its energies on researching and confirming the role of collective ownership of the working people under the leadership of the party of the working class.

The Soviet Nghe-Tinh movement has been researched and a number of projects have been published in the form of books or dissertations. These projects have been researched on both the central level and the Nghe-Tinh local level, both at home and overseas, in the Soviet Union and France with the constructive contributions of Vietnamese historians. These projects have helped to clearly establish the strength of the first mass movement under the leadership of the party, the revolutionary creations of the movement, the brave spirit of sacrifice of the revolutionary masses in the struggle and the significance of the movement as the first training ground of the revolutionary masses under the leadership of the party as well as the international significance of the movement.

The 1936-1939 movement is also the subject of research by a number of scholars, research designed to shed light on the second revolutionary training ground, one that embodied much that was creative in coordinating the democratic struggle with the national struggle, coordinating overt, legal struggle with clandestine, illegal struggle, coordinating the requirements of the nation with the obligation to unite internationally against fascism, against war and one that made a positive preparation for a new movement, the movement to launch the August Revolution.

The 1939-1945 August Revolution campaign was the history of the victorious struggle of the masses under the leadership of the party, was the process of coordinating armed struggle with political struggle to topple the ruling apparatus of the imperialists and feudalists and establish the people's democratic state led by the working class.

The history of the 9 year (1946-1954) war of resistance against the French was also the history of the unyielding, brave struggle by the people, the history of waging a war of resistance while building the country; this period of history marked the start of the establishment of the right of the working people to be the masters of society, the masters of their own lives and laid a favorable foundation for the advance to socialism. The war of resistance was victorious; the Geneva Accords were signed. North Vietnam was totally liberated and began advancing to socialism without experiencing the stage of capitalist development. Historical research projects on "The 20 Years of Socialist Construction in the North," "The Working Class in the Socialist Revolution," "The Alliance of Workers and Farmers," "The Class of Collective Farmers," "Revolutionary Heroism in Production and Combat," and so forth made positive contributions to the great change in Vietnam from a society of classes to a society in which there is no exploitation of man by man.

While North Vietnam was advancing to socialism, South Vietnam was temporarily under the control of the U.S. imperialists and their lackeys. The spirit of the Vietnamese "there is nothing more precious than independence and freedom" did not permit the enemy to turn back the wheels of history. The entire nation arose in the fight. The North, which was determined to advance to socialism regardless of the situation, served as the firm rear base for the struggle to liberate the South and reunify the country and played the most decisive role in this struggle; steadfast, tenacious South Vietnam arose in combat and played the most direct role in this struggle.

Even in the flames of war, dozens of historical projects deeply researched and exposed the nature of U.S.neo-colonialism and the schemes, tricks and unavoidable defeat of it in South Vietham. At the same time, numerous projects recorded the revolutionary creations, the heroic qualities and the impressive feats of arms of the Vietnamese in the great war of resistance against the United States for national salvation.

The science of history of Vietnam has clarified the process of our development to a pinnacle of the spirit of being the masters of the country, the masters of the nation's destiny in coordination with the spirit of struggling to become the masters of life in the face of harsh natural conditions and cruel enemies, thereby painting an unparalleled historical picture of the creative labor, the combat and the victories of the nation of Vietnam. This pinnacle is the spirit of socialist collective ownership of today.

The history of the nation of Vietnam in the present stage cannot be separated from the history of the development of the three revolutionary currents in the world. For this reason, the effort to research and disseminate world history, especially the history of the international communist and worker movement, has become an indispensable task of the agencies that research, teach and disseminate historical information in Vietnam. Many scholars have given their attention to researching, teaching and disseminating historical information on the countries of Laos and Kampuchea and then the history of the neighboring countries, China, India and the countries of Southeast Asia, the national liberation movement in Asia, Africa and Latin America, the non-aligned movement and, in particular, the national liberation movements that are developing toward socialism. The majority of research agencies has continued to focus its efforts in the research of world history on the socialist movement and the international communist and worker movement, primarily the history of the great October Revolution and the history of socialist construction in the Soviet Union and the other fraternal socialist countries, with particular attention to the history of the Cuban revolution. These subjects have not only been researched by professional historical research agencies, but also by propaganda and training agencies, educational agencies, foreign affairs agencies and so forth in order to make a positive contribution to implementing the plans for comprehensive cooperation with the Soviet Union and the fraternal socialist countries in the present stage.

Together with establishing the true features of history through investigation and research designed to resolve the unanswered scientific questions concerning the history of Vietnam, Vietnamese historians have also attached importance to criticizing and refuting reactionary viewpoints that sully and distort Vietnamese history while correcting the misconceptions about Vietnamese history of foreign historians who lack the conditions needed to deeply research Vietnam.

To begin with, Vietnamese historians exposed the colonial, feudal historical viewpoints expressed in a number of history books written by ghost writers for the colonialists, such as Tran Trong Kim's "A Brief History of Vietnam." In addition, Vietnamese historians have criticized and exposed a number of reactionary viewpoints, such as the viewpoint concerning the "polarity" of Vietnam, which was used to support the scheme to permanently partition Vietnam; the reactionary viewpoint concerning the origin of the nation of Vietnam, a viewpoint which holds that the Vietnamese only migrated from the North or from the South and which is nothing more than a scheme to reject the indigenous nature of the nation of Vietnam and the unique nature of Vietnamese culture; the viewpoint that emphasizes the role played by Confucianism in Vietnamese culture, etc.

More recently, the persons working in the field of Vietnamese history have concentrated their efforts on criticizing and exposing historical viewpoints reflecting aggressive expansionism and big-country hegemony expressed by the ghost writers for the "emperors" of China in past years and the reactionary clique now in power in the Imperial City.

The ideological struggle in this field of learning has helped to heighten the party spirit, the scientific nature and the militant nature of the science of history of Vietnam.

There are other achievements that have been recorded by the science of history of Vietnam in past years under the light of Marxism-Leninism. They include the increasing importance attached to collecting, collating, translating and publishing historical materials not only in the Han-Nom language, but also in French, Latin, English and so forth. They include the acceleration of the movement to research and compile information on local history and the history of specialized sectors. They include the constantly increasing international activities of Vietnamese historical circles as a result of the objective requirements of cultural exchange and the position, a position very worthy of pride, of our country's history in the history of mankind, etc.

The methodology of the Marxist-Leninist science of history has brought about significant changes in Vietnamese historical work. The quality of research projects and writing has constantly been increased. The criticism and introduction of domestic and foreign historical works have been intensified and the serious, cautious and scientifically objective nature of these efforts has been constantly increased. As a result, the unity within historical circles is being strengthened more with each passing day. At present, research and training in the methodology of the science of history are being directed toward understanding and implementing the principle that historical work reflect the party spirit and be scientific in nature. At the same time, on the basis of the strong development of the science of history in our country, we must delve deeply into the methods of determining the subjects of research of the science of history in each sector, determining the degree of reliability of the historical information contained in various historical materials and providing training in and applying the inter-sector method, which is also called the "multi-subject" method, in historical work, with importance attached to sociology and mathematics. All of this has the purpose of helping us to recognize historical truth, define the laws of history more precisely, compile and disseminate historical information more scientifically and facilitate deeper research among the masses.

In summary, under the leadership of the Vietnam Communist Party, the Marxist science of history of Vietnam has helped to reconstruct the true history of Vietnam and defeat the reactionary viewpoints of the imperialists, feudalists and compradore bourgeoisie lackeys of the imperialists in past years and of present international reactionaries, viewpoints that distort and sully the history of Vietnam, thereby helping to strengthen the legitimate pride of the Vietnamese in their glorious history. It has helped to heighten the spirit of independence, the spirit of self-reliance and the spirit of always moving forward in order to keep pace with the most progressive trends in the history of man and helped to mold the spirit of being the masters of nature, the masters of society, the masters of ourselves. It has helped to intensify the building of the new social system, the new economy and the new culture and the molding of the new socialist man in Vietnam.

By means of historical materials on the love of peace and justice in independence and freedom and the tenacious, unyielding struggle against every aggressor, expansionist and big country hegemonist, the science of history of Vietnam has clearly proven that Vietnam has always been a factor of stability in Indochina and Southeast Asia, not a factor disrupting stability as is now being falsely claimed by the enemy, thereby making a positive contribution to the struggle for peace, national independence, democracy and socialism in the world.

Developing upon the victories it has already recorded, the science of history of Vietnam is continuing to delve deeply into the traditions of our nation and the historic experiences of our people in the process of struggling to build and defend the country with a view toward actively supporting our two strategic tasks at this time, successfully building socialism and firmly protecting the Vietnamese socialist fatherland. Scholars in the history of Vietnam are now working on three basic projects of the Vietnamese historical sector, namely, "The History of the Nation of Vietnam," "The Cultural History of Vietnam," and "The History of the Working Class and Worker Movement of Vietnam." The science of history of Vietnam has also devoted an appropriate force to researching world history in order to further clarify the smooth combination of genuine patriotism and proletarian internationalism. The science of history of Vietnam is actively contributing to the establishment of a progressive science of history of mankind under the light of Marxism-Leninism.

A REVIEW OF THE VARIOUS JOURNALS IN THE HISTORY OF THE PARTY

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 9, Sep 81 pp 55-59

[Article by Nguyen Thanh]

[Text] The party considers journals, as well as newspapers, to be an effective weapon, to be an organ of training that raises the theoretical and political qualifications of cadres and party members in order to meet the increasing demands of the revolutionary situation and tasks. Against the background of illegal activities, quasi-legal activities or legal activities and during the period of struggle under the domination of the imperialists and their lackeys as well as since it began leading the revolutionary government, our party has always made every effort to overcome every difficulty in order to publish party journals.

The forerunners of the Vietnam Communist Party also published journals: the Indochina Communist Party, which was established in 1929, published the JOURNAL OF THE COMMUNIST; the Annamese Communist Party also began publishing its journal, the BOLSHEVIK REVIEW, in that year.

After the Vietnam Communist Party was born, we published RED JOURNAL Number 1 on 5 August 1930, which was typed on 13 x 19 centimeter stencil for printing. We published a journal before publishing a newspaper. (The newspaper THE STRUGGLE, which was the central organ of the party, was first published on 15 August 1930). In the "introduction" printed in issue number 1 of the RED JOURNAL, it was stated: "1. This journal will continue to be published indefinitely. There is no definite publishing schedule; the journal might be published once a week, once every 10 days or once every half month. 2. The material in the journal will either describe work methods or experiences of other countries, present world news, criticize our work and so forth; whatever material is available will be published." Some issues of RED JOURNAL only dealt with one subject, for example, issue number 1 only dealt with clandestine activities; some issues dealt with many matters. In late 1930, RED JOURNAL ceased publication.

Shortly thereafter, on 1 February 1931, the first issue of COMMUNIST REVIEW was published. In the "introduction" printed in issue number 1, COMMUNIST RVVIEW pointed out: the revolutionary movement in Indochina has developed strongly and the imperialists and feudalists are making every effort to annihilate our party and destroy the revolutionary movement. Our party is only 1 year old, our cadres and party members have little experience and many problems face the party and the region at a time when we do not have a journal to meet the demands of the situation; this is a major shortcoming. COMMUNIST RVVIEW is being published to rectify this shortcoming. The main purposes of COMMUNIST REVIEW are to explain the policies of the Communist International and our party and strongly attack erroneous thinking, opportunism and factionalism in order to achieve a unity of thought and action within the party." The review presented the experiences in struggle of our party and the fraternal parties, printed articles researching the political and economic situations in Indochina and the world, required that party members practice self-criticism and proposed innovations for advancing the movement in the correct direction. "Therefore, each and every party member must enthusiastically participate in the work of COMMUNIST REVIEW, must regularly express his opinions, contribute his experiences concerning and debate important issues, practice self-criticism..."(*) The review also performed the task of preparing for the national congress of the party.

COMMUNIST REVIEW was only circulated within the party. It was published for only a short time. After the members of the Party Central Committee fell into the hands of the enemy, COMMUNIST REVIEW had to cease publication.

Following the campaign of terror conducted in 1930 and 1931, some party cadres working overseas, concerned about the decline of the revolutionary movement at home and the heavy losses to the party, made every effort to restore the base of the party and launch the movement again. One of the jobs they performed was to publish a journal. In June 1933, they, too, published a journal entitled COMMNNIST REVIEW, calling it the "theoretical organ of the Indochina Communist Party." This COMMUNIST REVIEW played an important role in restoring and developing the party, re-establishing liaison lines, conducting research in order to summarize several experiences of the Indochinese revolution in past years, combating the Trotskyites and the supporters of nationalist reformism and preparing for the national congress of the party (it printed the complete text of the draft of the Political Report, the Party Program and Party Statutes and provided guidance to the basic level with regard to discussing and reflecting their opinions to the upper level). After publishing 22 issues and completing its glorious historic task in an extremely difficult period for the party, COMMUNIST REVIEW ceased publication at the 1st National Congress of the Party, which was held in Macao in March 1935.

In early 1934, under the personal guidance of Le Hong Phong, the Overseas Committee of the Party was founded. In June 1934, the committee published BOLSHEVIK REVIEW as the "organ of the Overseas Committee of the Indochina Communist Party." BOLSHEVIK REVIEW was born and published at the same time as COMMUNIST REVIEW, from June 1934 to March 1935, under the unified guidance of the Overseas Committee. After the 1st Congress of the Party concluded, BOLSHEVIK REVIEW was called the "theoretical organ of the Indochina Communist Party."

BOLSHEVIK REVIEW had the tasks of explaining the proceedings of the party congress, researching the struggle movements of the laboring masses within our country, translating a number of articles printed in the journals of the Communist International, presenting the arguments of Lenin concerning peasants, religions, the party and so forth. After the 7th Congress of the Communist International, BOLSHEVIK REVIEW translated and printed a number of the primary speeches at the congress and presented the speech by our party's delegation. The lessons and experiences learned and gained in the struggle of the international communist movement were presented by the review on the occasion of major holidays: the October Socialist Revolution, the Paris Commune and so forth. The issue of struggling against the Trotskyites and nationalist reformism within the Vietnamese revolution was dealt with in a regular column in the review.

---

*See: COMMUNIST REVIEW, Number 7-1981, pp 58-59.

BOLSHEVIK REVIEW ceased publication in January 1937. In order to easily slip through inspections conducted by intelligence agents, the form in which the various journals were published was constantly changed. Every copy had a false cover, the cover of a popular short novel, so that it could be easily carried from place to place and not draw much attention.

The journals were also regularly sent to the office of the Communist International by secret routes.

In the prisons, the chapters of the party also published both newspapers and journals. In the Hoa Lo Prison in Hanoi, the prison journal was published in late 1930. On Con Dao, the party chapter published an internal journal entitled COMMON OPINION, which was edited in prison house number 2, where many of the outstanding cadres of the party were detained, copied by hand a few times and then sent to prison house number 1 in order to be sent to the various installations; this journal was circulated from 1933 to mid-1936. Journals in prison became a forum for theory and a means for providing the cadres of the party with training in theory as well as a means for strengthening revolutionary optimism, struggling against the erroneous and reactionary trends of theory and politics that circulated in and outside the prisons and preparing cadres for activities after leaving prison.

In the period of the democratic front, the plenum held by the Party Central Committee in March 1938 decided that the "Party Central Committee needs a clandestine journal to explain issues that cannot be discussed in public books and newspapers." It was very regrettable that when it was engaged in quasi-legal and legal activities, our party published numerous books and newspapers dealing with the fundamental theories of Marxism-Leninism and the political line of the party but did not publish any journals.

When World War II broke out, our party shifted to clandestine activities. The Party Central Committee, the regional party committees and the provincial party committees published clandestine newspapers and, after the Viet Minh front was established, the central committee and many provincial committees of the Viet Minh published newspapers on a rather regular basis. In 1943, the Party Central Committee began publishing another journal entitled COMMUNIST REVIEW, which was primarily directed toward middle level cadres. Two issues of the review were published: number 1 on 28 February 1943 and number 2 on 24 September 1943, which were reproduced by lithography. At that time, the very fierce war being fought in the Soviet Union against the aggression by fascist Germany was being attentively followed by the entire world; at home, the revolutionary movement against the two strata of oppression, exploitation and terror of the French imperialists and the Japanese fascists was constantly developing. COMMUNIST REVIEW analyzed the strategic and policy issues of the Indochinese revolution and dealt with the task of making the leadership of the party strong enough to complete the task of winning national independence. Internationally, the review focused on analyzing the great war of national defense of the Soviet Union and confirming the inevitable victory of the Soviet Union and the democratic forces of the world, even though they were experiencing years and months filled with sacrifice and hardship. Issue number 2 of the review printed an article by General Secretary Truong Chinh entitled "The Dissolution of the Communist International," which clearly stated the reasons for the decision to dissolve the Communist International and the influence of the dissolution and the attitude of our party following the dissolution of the Communist International.

Following the 1945 August Revolution, our nation entered the long and heroic war of resistance against the French colonialists. The Party Central Committee published a journal entitled INTERNAL ACTIVITIES, which was the "party's central organ for training in work and theory." The first issue of INTERNAL ACTIVITIES was published In August 1947 and the journal ceased publication in March 1950. This was the first journal of the party to be printed in thousands of copies. INTERNAL ACTIVITIES played a major role in theoretical and organizational work and in guiding the implementation of the positions and policies of the party during this period. In its "introductory note," INTERNAL ACTIVITIES wrote that it would "always be loyal to Marxism-Leninism, guide each and every cadre in complying with the line of the party set forth during the war of resistance, reject all erroneous tendencies and reveal both strengths and weaknesses in order to strengthen and develop the party, in order to make the party a party of the masses. The journal will review the experiences of the various sectors in order to help party members perform their work well." Truong Chinh wrote the most important articles printed in the journal concerning the line and policies of the party.

In the mid-1950's, when our nation's fight against the French colonialists was developing strongly, internal activities could not, "in view of its format, fully perform" its new task. In keeping with the resolution of the 3rd National Conference of the Party (January and February 1950), the Party Central Committee published COMMUNIST REVIEW, "the organ of the party for providing training in work and theory," which was edited by Truong Chinh; however, only two issues were published: number 1 in July 1950 and number 2 in August 1950.

In the war of resistance, due to difficulties encountered with paper, ink and transportation to the remote zones and provinces, the number of journals printed at the printing plant of the central committee was limited, consequently, a number of zone party committees used their printing facilities to reprint INTERNAL ACTIVITIES and COMMUNIST REVIEW, which were widely distributed among their party organizations.

Many zone party committees, interzone party committees and regional party committees also published theoretical and political journals of their localities during the years of the resistance against the French: the Zone 12 Party Committee published the BOLSHEVIK REVIEW, the Viet Bac Zone Party Committee published the STRONG ADVANCE JOURNAL, the Interzone 4 Party Committee published STUDIES, the Nam Bo Regional Party Committee published the journal EXPERIENCES, which was later renamed RESEARCH, etc.

With the victory of the war of resistance against the French colonialists, our country's revolution entered a new period and began to simultaneously carry out two strategic tasks: building socialism in the North and struggling against the imperialists and their lackeys in order to complete the liberation of the nation and reunify the country. Our party and our people faced a new and extremely large and complex task that required the intensification of the teaching of theory and politics to cadres, party members and the masses. The 7th Plenum (enlarged) of the Central Committee, which was held in March 1955, decided to publish the journal STUDIES as "the theoretical and political journal of the party" in order to "assist the research of policy and the teaching of ideology and begin to develop the theoretical work of the party"; this journal was primarily directed toward middle level cadres. The first issue of STUDIES was published in December 1955.

Whereas the previous journals of the party were only circulated internally, STUDIES was the first journal to be published in large quantities and widely circulated both within the party and among the masses; it was the first journal to be published monthly; it provided to cadres, party members and the revolutionary masses, even those at the most remote places on the battlefields fighting the United States, with very important spiritual nourishment.

STUDIES heightened its theoretical and political nature by discussing all matters pertaining to social life in the North, the struggle against the United States and their lackeys and party activities, by providing training in the proletarian ideology, by opposing non-proletarian ideologies, by introducing the experiences of the fraternal socialist countries, by discussing even matters related to the communist and worker movement and the national liberation movement in the world, by opposing the various types of opportunism and by protecting the purity of Marxism-Leninism.

During the wars of the resistance against the United States for national salvation, the CENTRAL OFFICE of South Vietnam published VANGUARD JOURNAL, The various zone party committees in the South also published their own theoretical journals.

After the war of resistance against the United States won total victory, the 4th Congress of the Party met to set forth the domestic and foreign affairs lines of the Socialist Republic of Vietnam and establish the tasks involved in building the party in the new stage of our country's revolution. On the basis of the tasks of the revolution in the new stage and on the basis of the resolution of the 4th Congress of the Party on changing the name of the party to the Vietnam Communist Party, the Political Bureau decided to change the name of STUDIES, the organ of theory and politics of the party, to COMMUNIST REVIEW in January 1977. At present, COMMUNIST REVIEW is continuing to perform its historic task.

Today, COMMUNIST REVIEW is being published monthly in quantities larger than all of its forerunners and being widely distributed both at home and in many countries of the world; its contents are constantly improved as is the quality of its articles; it plays an important role in the activities and the theoretical, ideological and political struggle of our cadres, party members and people and has been closely associated with the growth of the party and the glorious victories of our country's revolution.

SOME TRAITS OF FRATERNAL LAOS

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 9, Sep 81 pp 60-64

[Article by Thao Hien]

[Text] The familiar aspects of the history, geography, population, customs, economy, culture and so forth of this close neighbor and fraternal country have been discussed by many persons. In the major libraries and the huge archives in Paris, Washington, Tokyo, Beijing and so forth, in addition to books, newspaper articles and research projects, there are also volumes of documents and reports with quoted sources of information and data, the completeness of which would seem unsurpassed anywhere in the world. However, it is incorrect to say, on the basis of this huge collection of information, that the persons at one place or another have a full understanding of a particular country. Two imperialists powers and their armies of lackeys went to Laos, travelled into its deep jungles and climbed its high mountains, some white colonialists "mixed with the masses" by eating ethnic meals, buying jewelry and taking "native wives"; many colonialist officials became the authors of books on Laos; yet, one after the other, both imperialist powers and their corporations had to pack up and leave, leaving behind "unfinished careers." The Chinese expansionists, in the guise of "comrades" once brought in an entire road construction army together with a fifth column that laid in "permanent ambush"; in the end, however, when their true identity was revealed, the "envoys" who prepared for their scheme of expansionism were also forced to leave.

It was not a matter of the grapes being too ripe to pick! Rather, it was a matter of the fox being driven off, being forced to leave. The Chinese expansionists might have known very much but there was one thing that they did not know, namely, the qualities and strength of those who forced them to leave!

The Great Strength of Three and One-Half Million Persons

The imperialists and the expansionists always consider ethnic minorities to be subjects to be ruled or targets of their aggression. The books, newspapers and documents of France and the United States usually describe a Laos that is sparsely populated, has a natural economy, uses rudimentary and primitive farm implements, has a low level of production and consumption, etc. There is not one document, not one research project that talks about the potential strength of a united national community, a community of love and devotion living on slightly more than 230,000 square kilometers of land blessed by nature. When they were driven off by the people of Laos, the Beijing expansionists threatened that the nearly 1 billion Chinese living at the headwaters of the Mekong River could kill the more than 3 million people of Laos merely by urinating (later, in order to sound a little less unsanitary, they would say by "merely spitting"). This is Beijing's stick. But, the Chinese carrot also smells of big country chauvinism. If Laos were to take China's side, the entire country of Laos could be well fed and well clothed merely by means of each Chinese consuming a little less rice and cloth! Afrer the 3.5 million people of Laos, together with the two fraternal countries on the Indochina peninsula, defeated the two imperialist powers and became a victorious people, became the total masters of their fatherland, the Beijing expansionists continued to maintain this disdainful attitude!

Revolutionaries armed with Marxism-Leninism uphold the virture of humility but, on the other hand, clearly realize the tremendous strength and noble qualities of their nation and of fraternal nations. This is the source of the optimism and the confidence in victory that are felt even when the forces of the revolution are still small and encountering countless difficulties and challenges. At the start of the 1980's, our Lao friends have the opportunity to look back over the course they have travelled; it has been 35 years since their seized political power and began the war of resistance and one-half century since they received the light of Marxism-Leninism. Many of the comrades who travelled this historical course could not help but be surprised by the strength of their nation and the extraordinary growth of the party leading the revolution and of each revolutionary.

From a purely quantitative point of view, 3.5 million persons is not a small number. If they are conscious of the destiny and future of their nation and voluntarily unite in struggle in accordance with a correct revolutionary line, 3.5 million persons can become an invincible force. Marxism-Leninism closely links every revolutionary nation to the community of revolutionary nations in the world. The strength of these 3.5 million persons is thus multiplied many times. Realizing their own combined revolutionary strength and closely linking it to the combined revolutionary strength of our times, this is the cause and effect relationship of a correct, truly Marxist-Leninist revolutionary line. No longer theory, the victory of the Lao revolution over the past several decades, the steadfastness and confidence in victory of the people of Laos in the face of today's powerful enemies, in the face of the historic task of building and protecting the socialist fatherland are living reality, are eloquent proof that shed light on the characteristics of the new age.

Creative and Unique

To date, no research project has fully presented the creative and unique aspects of the Lao revolution. However, everyone near and far is, to some extent, aware of the fact that the long struggle and the victories of the Lao revolution possess special characteristics. Every victorious revolution contributes something special to the storehouse of experience of the world revolution. A number of documents of the Central Committee of the Lao People's Revolutionary Party and several works in the nature of summaries by General Secretary Kayson Phomvihan provide us with guidelines for gaining a deeper understanding of and admiring the creative and unique aspects of the Lao revolution.

It can be said that one of the valuable experiences of the fraternal party is that of seizing the opportunity for winning victory. Concerning the matter of seizing opportunities and the profound realities of the struggle, a struggle waged under many different forms and by many different methods, there is much that is of interest to theoreticians, journalists, historians and persons who write plays, films and textbooks in both countries.

When we have an opportunity to review history and look at that which lies around us and seem to see something new in a familiar event, it is a source of untold admiration: in Southeast Asia, while the German fascists were being defeated in the West and the Japanese fascists were surrendering in the East, there were uprisings in the countries of Indochina. In August, we in Vietnam seized political power throughout the country; in Laos, our friends staged uprisings in the capital and the provinces. In September, Vietnam issued its Declaration of Independence; in October, Laos issued its Declaration of Independence. And, the two fraternal countries, utilizing their young, small forces, waged long wars of resistance together, gradually won victory together and ultimately won final victory together.

Not only in Southeast Asia, but also among the colonial countries of the world, in general, Laos was the first country to prepare to seize the opportunity and stage an uprising, was a country that struggled bravely and won glorious victory. Examined in view of the special characteristics of Laos, this historic truth alone suggested major research projects to researchers and has made us deeply proud of the country and its fraternal people.

Recently, on the occasion of the unsuccessful coup d'etat in Thailand, many persons recalled an historic event to which it could be compared. In 1973, by signing the Paris Agreement, the U.S. imperialists accepted defeat in Indochina, thus causing their lackeys within the region to panic and fall apart; the masses were strongly inspired. In Thailand, there were spontaneous uprisings by the students and people of Bangkok to topple two reactionary field marshalls who were lackeys of the United States. The imperialists thought that the domino effect would cause the collapse of the reactionary regime in Thailand following the collapse of the lackey regimes in Indochina. However, the revolutionary opportunity was missed because the Thai Maoist party "adhered" to its guideline of "using the countryside to surround the cities" and was loyal to Beijing's line. Meanwhile, the Lao revolution moved rapidly forward, expanded the liberated zone and strengthened its revolutionary forces in the cities in order to deal the decisive blow and win total victory in concert with the final offensive thrust by Vietnam in 1975.

Pride in Their Historic Mission

One of the major crimes committed by the Beijing recttionaries has been to collaborate with the U.S. imperialists and the other reactionary powers in activities designed to sabotage the revolution in Indochina and thwart the revolutionary forces of the masses in Southeast Asia. The thrust of their effort has been directed toward opposing the revolution in the three countries of Indochina. The genocidal regime in Kampuchea, which was a product of Beijing, and the aggression on the southwestern border and the northern border of Vietnam are clear examples of this effort. In Laos, the Beijing reactionaries have collaborated with the U.S. imperialists and the various types of lackeys within the region in many areas from military intimidation and political and ideological sabotage to economic and cultural sabotage, to preparing the conditions for fomenting rebellions, subversive activities, peaceful evolution and so forth. The struggle by the people of Laos to combat and gradually defeat the scheme of the enemy is no less arduous and fierce; however, from the outside, it appears as thought no struggle is occurring at all. This struggle, although only marked by gunfire on rare occasions, is a very complex and arduous struggle that requires especially high revolutionary qualities: constant vigilance, steadfastness in the face of every challenge, the establishment of a stand concerning friends and enemies and the maintenance of a correct domestic and foreign political line in order to advance the revolution.

The Beijing reactionaries and the other enemies are constantly opposing the political line of the Lao People's Revolutionary Party. While the party has shown the people the true nature and every scheme and trick of the enemy, the enemy has been looking for every way to confuse some of the people by saying that the people of Laos have many enemies as a result of the political line of the Lao People's Revolutionary Party, that if they adopted a neutral line sympathetic toward both sides, Laos would receive multilaterial aid and life within the country would rapidly improve. All persons of revolutionary conscience and experience are in complete agreement with the party and are not being deceived by the enemy. The reply to the cunning argument of the enemy has been clearly stated, has become the consciousness of the entire party and all the people: for the past several decades, Laos and the fraternal countries of Indochina have manned the forward position of the socialist community in Southeast Asia and been worthy of that position; the victory of the Lao revolution and the victories of the other revolutions in Indochina have helped to weaken imperialism and strengthen the forces of revolution in the world, are a tremendous source of inspiration to progressive mankind, have changed the balance of power in Southeast Asia and are a source of direct inspiration to the peoples of the countries in this region. For this reason, it is very easy to understand why the Beijing reactionaries and other enemies were defeated in Laos and the other countries in Indochina in which they have collaborated to insanely oppose the Lao revolution. By undermining the correct political line of the Lao revolution, the enemy seeks to use the greatest pride of the peoples of the Lao ethnic minorities and deprive them of the weapon that they used to win every victory in past years and are using to win victory today.

A nation that has waged a long revolutionary struggle, won glorious victory, is close to the party that is leading it and is proud of its historic mission is steadfastly moving forward and standing shoulder to shoulder with the fraternal nations on the Indochina peninsula to win victory in the new stage of the revolution.

Vietnamese-Lao Affection Has Become a Law of Life

As the enemy has intensified the use of intimidation along the northern border of Laos and sent in commandoes to commit acts of sabotage in the South and as Thailand has closed its western border, the militant solidarity between Vietnam and Laos has become stronger than ever before. The people of the Lao ethnic minorities stood shoulder to shoulder with the people of Vietnam in the tenacious fight over the past several decades and are maintaining and developing upon the accomplishments of the revolution in the new stage.

In the past, many Lao and Vietnamese cadres fought the French and the Americans together in the Nam Thao, Plaine de Jarres, Xieng Khouang and other campaigns; today, young troops of the two countries stand shoulder to shoulder maintaining the border. Elders in the villages have related to their children their memories of fighting the French and the Americans and say: whenever there are difficulties, Laos and Vietnam become even closer. Their leaders on the central level have also frequently said to their cadres and the people: whenever Laos encounters difficulties, Vietnam is the first country to run to provide assistance. This was true in the past and continues to be true today. Loyal affection has become a law in the lives of the two fraternal nations!

The enemy is making every effort to undermine the solidarity of the fraternal countries on the Indochina peninsula and undermine the special relationship between Vietnam and Laos by means of many sophisticated and cunning forms and tricks. However, the two fraternal parties, the two fraternal nations, which have experienced challenges in the history of their uniting in struggle against the common enemy, have constantly displayed high revolutionary vigilance. The comrades in Laos have referred to the scheme of the enemy in the following way: the enemy is trying to break one chopstick in the middle of a bundle of chopsticks, to cut one old tree, one young tree in the middle of an entire forest. Our comrades and compatriots in Vietnam, imbued with the thinking of our party, constantly remind one another to maintain the fraternal affection between Vietnam and Laos as though it were the apple of our eye. The loyal and special affection between the two fraternal countries, whose destinies are closely linked together, is being strengthened by both sides, shall endure forever like the Truong Son Mountain Range and is being expressed in revolutionary actions, in practical work being performed within the militant alliance and the comprehensive cooperation between Vietnam and Laos.

INDIA: AN IMPORTANT FACTOR OF PEACE AND STABILITY IN ASIA AND THE WORLD

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 9, Sep 81 pp 65-70

[Article by Luu Quy Ky]

[Text] More than 30 years ago, India, which was writhing under the yoke of domination of British imperialism and French colonialism, presented a harsh picture to the world: the Ganges River was a river of tragedy and India was a poor country in which millions of persons were the victims of floods, drought and disease each year. At the end of the last century, many patriots and revolutionaries often repeated a saying filled with meaning: when the British colonialists stepped foot in India, the bright white fields of flowers (of cotton plants) turned the color of dried bones. And, they predicted: India would be one of the first places to launch a revolutionary movement against imperialism because the law "wherever there is oppression, there is struggle" is a law of the development of the history of all nations!

In August 1947, after many centuries of struggling against the feudal and colonialist regimes, India won its independence and freedom. As Asia underwent fundamental changes following the victory of the Soviet Red Army in routing the Japanese fascists in Manchuria, independent India made rather rapid progress in its effort to build the country in peace time. Today, India is a large country, a country that occupies an important position in the world arena, especially in Asia and among the non-aligned countries, and is making positive contributions to the cause of peace and the friendship of nations in the world.

A Crucible of Mankind Becomes A Country with the Stature of a Continent

As a nation state, India was formed long ago. The banks of the Ganges River, which is called the mother of India's rivers and which has its origin in the snow covered Himalayan Mountains, were one of the crucibles of mankind and one of the first areas to be settled in the large country of India of today.

Today, India consists of 22 states and 9 subordinate territories, measures more than 3 million square kilometers (nearly 10 times the size of our country), has a population of roughly 700 million (13 times the size of our country's population), and is the second most densely populated country in the world. (It has been estimated that its population will reach 1 billion by the start of the 21st

Century). Due to its size and population, India has the stature of a continent, consequently, many persons call it the "Indian subcontinent."

Geographically, India lies in South Asia and faces the Bay of Bengal and the Indian Ocean; to the north, it shares a common border with Pakistan, China, Nepal, Bangladesh and Burma; in the center of the country are the important home ports on aviation and maritime routes from the west to the east and vice versa, such as Bombay, Madras, Calcutta and so forth; to the south lies the Indian Ocean.

As regards humanity, India is one of the richest and most diverse countries in the world. In addition to Hindu, the main race (which is of Aryan origin), hundreds of other races swept into India in the several thousand year history of foreign aggression, including the Kushans, Mongols, Phoenicians, Pathans, Greeks, Romans, Persians, Monguls, Anglo-Saxons, Arabs, Chinese, French and so forth. Some 844 different languages are spoken in India, 15 of which are considered official languages and 47 of which are spoken by 100,000 persons or more. Because so many different languages are spoken, the people of India use English as the universal language for trade.

More than 3,000 years ago, this subcontinent was the point of convergence of many civilizations, religions and cultures. The first book of mankind--The Vedas--was written in India.

It is difficult to determine exactly how many religions, philosophies, lifestyles and styles of temples there are in India. The major religions are: the Hindu religion, Buddhism, the Moslem religion, Jainism, Sikhism and Kitoism, each of which has its own place of worship; their temples, shrines and churches blend with one another in the villages and cities.

Thousands of years ago, religious philosophers in India introduced man's consciousness to the three sacred gods: Brahma (the Creator), Vishnu (the Preserver) and Shiva (the Destroyer). On the basis of these three gods, three different social forces can be distinguished: progressive, backward and reactionary. This has become a source of endless inspiration to philosophy and art in India.

In every locality of India, one can see unparalleled architecture, sculptures and paintings; interesting dances and songs and poems of many different forms that deal in depth with thinking; a colorful and unique style of dress and so forth. All of these are the heritage of a past that is 5,000 to 6,000 years old, a heritage in which fraternity, love and a fondness for art have deeply permeated each family, each working person.

In view of the tremendous importance of its geographical position and population, its important strategic position, its long standing spiritual and cultural values and its working people filled with creativity, the Republic of India is a great nation, one to which the peoples and governments of the countries of the world and our country attach very much importance.

A Poor, Backward Agricultural Country Becomes a Developing Industrial Country

The image of a poor, starving and disgraced India under the yoke of feudal and colonial domination is gradually being erased. Only in independence and freedom have the people of India had the conditions needed to build and develop the country. It was Jawaharlal Nehru who, when he became prime minister of the Republic of India, discovered the characteristics and the tremendous capabilities and potentials of his fatherland, which he recorded in his famous work: "The Discovery of India." And, citing the "need for an independent, autonomous economy," he set forth a plan for overcoming economic backwardness on the basis of "nationalization, planning, industrialization..."

After more than 30 years of freedom from the domination of colonialists and feudalists and building the country in peace, the Republic of India has undergone significant changes. By using the old base left behind by the British colonialists, developing its rich natural resources, utilizing the strengths of its tropical and temperate climate and tapping the spirit of diligent and creative labor of its people, India has recorded tremendous achievements.

According to data published by the Statistical Center of the government of India in 1980, agriculture has developed rather rapidly. Between 1960 and 1979, the amount of area under cultivation increased from 133 million to 144 million hectares; cereal output increased from 82 million to 131 million tons (prior to 1947, cereal output was 50 million tons per year); the number of villages served by electricity increased from 22,000 to 233,000 and the percentage of the country served by electricity now exceeds 60 percent.

Industry has experienced extraordinary development. Whereas the index of industrial output was 55 in 1960, it increased to 100 in 1970 and 150 in 1979. Thus, compared to 20 years ago, India's industry has increased by nearly 300 percent and agriculture has increased 50 percent.

The output of a number of important sectors has increased significantly. Between 1960 and 1980, coal output increased from 56 million to 114 million tons, petroleum output increased from 0.45 million to 12 million tons, cement output increased from 8 million to 19.5 million tons and so forth.

India has made major efforts to develop its communications and transportation: it now has 61,000 kilometers of railroad, 11,000 locomotives and more than 500,000 railway cars. Over the past 20 years, India has increased the size of its road network nearly three-fold. In particular, agencies and enterprises as well as private individuals use automobiles produced by India. India has also begun to manufacture aircraft and is capable of building ocean and coastal ships of the 10,000 ton class.

Many large cities, such as Bombay, Calcutta, Madras and so forth, are clearly industrial centers. Not long ago, India only exported agricultural products such as tea, jute, cotton fiber, spices and so forth; today, it sends to the world market more than 3,000 industrial products. The development of culture, education, public health, physical culture and sports has also been unique in certain respects. One point deserving of attention is that the total number of artistic films produced by India each year exceeds the number produced by the United States.

India has recorded its first achievements in the research of nuclear energy and outer space as well as in the fields of medical science, biology and so forth (India has seven satellites in outer space and is cooperating with the Soviet Union in preparation for sending humans into outer space).

Together with the development of industry, the bourgeoisie has grown; the working class has constantly grown in size and its quality has constantly improved.

However, there is still much that India must do. Prime Minister Indira Gandhi has observed: because the country is so large and because of the very severe poverty left behind by the old system, India cannot be considered to have won even half the battle!(that is, not completed one-half of the building of the country). This is easily understood: how could India, in only a little more than 30 years of independence, complete the extremely large and difficult historic tasks of supplying food, providing health care, building housing and schools, providing jobs and meeting the material and cultural needs of nearly 700 million people? This is a major challenge,""an extraordinary task," as emphasized by Prime Minister Indira Gandhi, one which India is focusing its efforts on performing.

The Homeland of the Five Principles of Peaceful Coexistence

Even before India became independent, Jawaharlal Nehru, the great leader of India, participated in international activities to unite with the peoples of Asia and Africa and struggle with them against imperialism and colonialism. Today, India still resolutely denounces the U.S. imperialists for strengthening its military bases in the Indian Ocean, especially on the island of Diego Garcia, considering it to be "a direct threat to the coastal states and the hinterland of India."

As soon as it was born, the infant Republic of India made contributions to peace and friendship among nations. In the 1950's, while the peoples of many countries were making every effort to heal the wounds of World War II, the U.S. imperialists, with an atomic bomb in one hand and the "Marshall Economic Aid Plan" in the other, insanely launched a cold war and make preparations for a hot war. At the time, the Soviet Union and the other socialist countries set forth a peaceful foreign policy, exposed the bellicose scheme of the imperialists and established and expanded the world peace movement. Against this background, the proclamation by former Prime Minister Nehru in New Delhi of the five principles of peaceful coexistence was an event of historic significance. These five principles formed the basis for the 10 principles of the Conference of Asian and African Countries held in Bangdung in 1955. The Indian government made an important contribution to the Bangdung conference and the conference was considered the foundation of the present day movement of non-aligned countries.

The government of India headed by former Prime Minister Nehru was one of the first governments in the world to implement a policy of non-alignment and a policy of not joining the aggressive military blocs established by the imperialists and colonialists. Indira Gandhi, who has continued the undertaking of former Prime Minister Nehru, has also directed the efforts of the government headed by her toward the struggle to maintain the movement of the non-aligned countries in exact accordance with the goals initially adopted by it. (This was further proven at the Conference of Foreign Ministers of the Non-Aligned Countries held in New Delhi early in 1981).

Deserving of attention is the fact that, due to the historic circumstances of the country, the leaders of India quickly recignized Beijing expansionism and the global reactionary strategy of China. At a meeting of Indian intellectuals and diplomats to discuss India's policy regarding China, which was held in the capital New Delhi on 9 August 1980, Mr. K.R. Naryanan, the former Indian ambassador to China and assistant dean of Nehru University, repeated the words spoken by Primer Minister Nehru in 1963 concerning China's military attack against India in late 1959: "China's true goal is to force India to accept a political solution that will bring India's policy within the orb of the global policy of China. If this does not happen, China will exert all of the pressure it can upon the Indian government and create internal confusion within India because China considers India to be the main obstacle in their plan to rule all of Asia."

India was also the victim of the "punitive expeditions" launched by China, which many Indian intellectuals derisively call the "pedagogical war."(*) In a book entitled "India's Foreign Policy"(**)(the author of which was a former foreign minister of India), it states: "...Following the 1962 war, a foreign minister reported to me that the supreme leader o[illegible]hina sent word to him that 'if the Indians do not learn their lesson'(the lesson being 'taught' to India by China), China will teach them some more, teach them forever."

Having endured the suffering of wars of aggression and today being pressured by the imperialists from the Indian Ocean, the Beijing expansionists from the North and the reactionary powers in Pakistan and Bangladesh, the people of India have a very deep love of peace and desire to live in peace so that they can build their country. Expressing this legitimate appiration, Prime Minister Indira Gandhi said: "...The common trend of the world is the trend toward peace. The task of India and of all peace loving countries is to struggle to reduce tensions, find solutions to limited wars and prevent a new global conflict."

Following a foreign policy that supports peace and friendship among nations, the Republic of India naturally has good relations and increasingly broad economic cooperation with the peace loving countries that are determined to safeguard peace, including the Soviet Union, the other socialist countries and the progressive democratic countries.

In view of its large stature, abundant potentials, large population, important strategic position and positive foreign policy, the great Republic of India is an important factor contributing to the establishment of peace, stability and friendship in Asia, in particular, and the world, in general.

The Long Path of Indian-Vietnamese Friendship

The peoples of the two countries of Vietnam and India have long enjoyed a beautiful and stable friendship.

More than 2,000 years ago, after Buddha meditated at the foot of the Bo tree at the Hang Temple west of Calcutta, many Indian monks spread the religion to the countries of Southeast Asia, including the three countries of Indochina. Buddhism, with its doctrine of "mercy, fraternity and not injuring any living creature" and its thinking concerning "cause and effect," was accepted by our people in a creative manner consistent with the style and soul of the nation of Vietnam and were transformed into "love others as you love yourself," "the inhabitants of a country must love one another" and "there is goodness in kindness, evil in violence," which are part of the ethics of our nation.

Later, many Indian laborers migrated to our country to live and work. For a long time, Vietnamese of Indian origin or overseas Indians have lived in harmony with our people.

At the start of this century, when the peoples of the colonial, semi-feudal and semi-colonial countries and the dependent countries began to become enlightened and search for a course of national salvation, the leaders of Vietnam and India met and acted together for the sake of the independence movement of the peoples of the countries of Asia and Africa. The main feature of this relationship was the great friendship between President Ho Chi Minh and the three generations of comrades-in-arms who carried on Nehru's undertaking and led India down the path of struggling for independence and building the country. Concerning the visit made by herself and her father, Prime Minister Nehru, to Vietnam in 1954, Indira has said: "To my father, It renewed the friendship with President Ho Chi Minh that was started in 1926; to myself, it was a trip that left me with deep impressions..."

In the 1950's, India was the first country to recognize the Democratic Republic of Vietnam after the socialist countries and fulfilled its international obligation on the International Commission to Inspect and Supervise the Implementation of the Geneva Accords on Vietnam, Laos and Kampuchea.

Indian Prime Minister Jawaharlal Nehru, the head of the government, visited Hanoi for the first time shortly after North Vietnam was liberated following the victory of Dien Bien Phu.

While our people were waging the war of resistance against the United States for national salvation, the movement against U.S. aggression in Vietnam among the people of India was very intense. India also recognized and established diplomatic relations with the Provisional Revolutionary Government of the Republic of South Vietnam.

When our country was attacked by the Beijing expansionists, India was one of the places that strongly voiced the sentiment "hands off Vietnam!" and was one of the countries that provided us with valuable economic, scientific and technical cooperation and assistance.

The Indian government's early recogition of the Kampuchean Revolutionary government headed by President Heng Samrin was of major importance and significance, not only to the people of Kampuchea, but to the peoples of Vietnam and Laos as well.

The policy of the Indian government toward South Asia and Southeast Asia also conforms with reason and sentiment, expresses respect for independence, peace and stability within the region and opposes the intervention, aggression and expansionism of great nation hegemony: "It is our hope that the countries of South Asia and Southeast Asia resolve the problems they have with one another through negotiation." This policy has been welcomed by the people of Vietnam as well as the peoples of many other countries.

The friendship between the two peoples of India and Vietnam is a long, stable and constantly growing friendship. The basis of this friendship, as observed by Prime Minister Indira Gandhi, is that "the people of India feel many good sentiments and admiration for the people of Vietnam. We strongly supported the struggle of the Vietnamese for independence, freedom and the reunification of their country... The visit to India by Premier Pham Van Dong in 1980 strengthened the sincere and friendly ties between our two countries... I hope that our two countries will always stand shoulder to shoulder in the cause of peace and international friendship."

The words spoken by Prime Minister Indira Gandhi reflect the sentiments and aspirations of the people of Inda. In all of the states of India, we can hear a rather universal opinion being expressed:

"Vietnam is not simply the name of a country. Vietnam has become an adjective that awakens the deepest emotions in everyone who desires independence and freedom, who admires unparalleled bravery, in everyone who loves his country, loves the truth and protects the dignity of man. Vietnam has experienced the greatest of challenges and defeated the aggression of the largest and most cruel enemies. This should be a good lesson to persons who harbor sinister schemes. Regrettably, there are still those who have not gained experience..."(1)

The beautiful sentiments of the peoples and the foreign policies of the two governments are the basis of the firm friendship between India and Vietnam. This friendship, which has been challenged, can only become more beautiful with each passing day.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

MILITARY AFFAIRS AND PUBLIC SECURITY

LAM DONG PROVINCE NEW ECONOMIC ZONE STRENGTHENS SECURITY MEASURES

Hanoi HANOI MOI in Vietnamese 16 Sep 81 pp 1, 4

/Article: "Hanoi New Economic Zone Public Security Forces Coordinate with Self-Defense Forces, Strengthen Public Security"/

/Text/ Compared with 1980, much progress has been made since the beginning of 1981 in public order and security in the Hanoi New Economic Zone in Lam Dong Province. The public security forces regularly stick close to their area of activity, listen to the opinions of the masses and promptly halt and deal with incidents in which the property of the state and people is stolen or rumors are circulated distorting the line and policy of the party and state.

The public security post has sent cadres and men down to the primary level units to establish 60 people's security teams and agency, enterprise, station, farm and cooperative protection units. Moreover, the post has also organized sessions to discuss current events concerning the plots and stratagems of the group conducting psychological warfare while simultaneously providing proposals on methods of prevention, vigilance and resistance.

The primary level self-defense and protection and the people's security forces have closely coordinated with the public security forces to organize patrols and guards and to participate in inspection and control of warehouse issues and receipts and in distribution of goods, agricultural products, grain and food. Consequently, occurrences of waste, corruption, slipping state goods into the "free" market, irrational and unfair distribution, etc. have been restricted.

Responding to a phase of emulation launched by the Hanoi New Economic Zone Leadership Committee to achieve merit for welcoming the Fifth National Party Congress, the public security sector and people's security forces in the zone have established action programs consisting of the following tasks:

Strengthening the protection network at the primary level. First of all, strengthening the public security stations in the two areas of Tan Ha and Lan Tranh. Deploying control stations to block those illegally selling state materials and goods on the free market.

Closely inspecting the distribution and use of material supplies, fuel, fertilizer, etc.

Strengthening patrols and guards to protect socialist and people's property.

Firmly managing household registration. Resolutely expelling illegal residents from the zone. Following the two princincts of Hai Ba Trung and Dong Da, the public security forces of Hoan Kiem Precinct on 15 September 1981 held a conference to summarize work in raising the quality of area police during 1981.

In a movement phase of quality improvement, the ward public security forces improved working procedures and elevated their spirit of responsibility and capabilities. Consequently, they have contributed worthwhile achievements in market management to resist speculators and smugglers. In order to evaluate the total results of the movement phase, the precinct public security forces inspected the ward and area police commands. Twelve of the 17 ward public security commanders participating in the inspection achieved ratings of fair and excellent. Of the 35 deputy ward commanders, 26 achieved ratings of excellent and fair. Nearly 80 percent of the area police achieved excellent and fair ratings.

The conference also reviewed shortcomings which must be quickly overcome such as not firmly grasping management objectives, not building strong people's security teams, not firmly managing household registration, etc.

After the inspection, a number of outstanding cadres and men were praised.

The conference also set forth a struggle objective to eliminate "average" types, establish people's security teams with procedure, a firm grasp of the situation and good management of household registration, individuals engaged in illegal activity, etc.

MILITARY AFFAIRS AND PUBLIC SECURITY

FULRO RECEIVES PRC SUPPORT, GUIDANCE

Hanoi TAP CHI QUAN DOI NHAN DAN in Vietnamese No 9, Sep 81 pp 35-40

[Article by Lieutenant Colonel Nguyen Tan: "Border Defense Posts and Effectiveness of Border Defense"]

[Excerpts] Since the Democratic Republic of Vietnam--presently the Socialist Republic of Vietnam--came into existence problems have existed on the borders of our fatherland. However, border defense never required or experienced conditions for development on such a large scale as today.

Border defense effectiveness is, above all, maintaining the security of our land and sea borders and effectively managing and safeguarding our national sovereignty. Our nations borders occupy a critical and important position in matters /political, economic, military and diplomatic. The enemy without and the reactionaries within regularly work hand-in-hand with each other in our border areas in the protracted opposition and sabotage of our nation's revolution.

Along with their activities of stepping up war preparations and armed provocations, the People's Republic of China reactionaries continue to send many intelligence and ranger teams into Vietnam. They continue their ambushes, attacks, sabotage and the establishing of counterrevolutionary bases for units of armed reactionaries. They promote counter propaganda activities, sow confusion and spread distortions. They obstinately continue to provide active support and guidance for FULRO in the Central Highlands and they sabotage our economy in the border areas. All this is intended to sabotage our nation and maintain a continuous pressure and the threat of an aggressive war against Vietnam.

POLICE CORPORAL CAPTURES CRIMINAL

Hanoi HANOI MOI in Vietnamese 25 Sep 81 p 2

/Article by Tran Ngoc Cai in the column "Serving the People": "Both Brave and Precisely in Accordance with the Law"/

/Text/ On 17 August 1981, a passerby was held up along a field ditch in Dong Ngac Village. Receiving the report, the Tu Liem District public security forces immediately organized to hunt down and arrest the suspects. Upon reaching the site, the suspects had vanished. It was learned from the people that the two men were Pham Xuan B. from Dong Ngac Village and D. from Co Nhue Village. The district public security forces ordered the criminal police unit and the Nong Lam police station to pursue and arrest the offenders.

On the morning of 4 September, Corporal Nguyen Van Tuc spotted B. get off a bus and enter a Nong Lam restaurant. Tuc called on B. to come to the station. Receiving the arrest announcement, he fled. After a pursuit of 300 meters, Tuc caught B. He resisted the authorities. D. ran up and gave B. a bayonet. Immediately, this gangster made a lunge at Tuc's face but he was able to dodge. He then made a lunge a Tuc's back. Simultaneously dodging and boxing, Tuc felled him. Taking advantage of his lower position, B. stabbed Tuc in the side. Suppressing the pain, Tuc blocked his hands and made him drop the bayonet. With the assistance of a number of workers from nearby enterprises, Tuc took the gangster into custody. The people were angry and moved forward to beat B. but Tuc calmly explained that they allow the responsible agencies to deal with the matter in accordance with the law.

Corporal Nguyen Van Tuc set a shining example in courageous spirit and a concept of obeying the law.

MILITARY AFFAIRS AND PUBLIC SECURITY

CATHOLICS WARNED AGAINST IMPERIALIST DIVISIVE TACTICS

Hanoi CHINA NGHIA in Vietnamese 1 Oct 81 p 1

[Article: "Vigilance About Imperialism, a Virtue Which Catholics Cannot Lack"]

[Text] In recent days, reports have popped up once again at a number of places that the "Virgin Mother weeps," that the "Virgin Mother enters the body" of this person, and that the "Virgin Mother sends a letter" to that person, ordering this or that. At some other places, invocations of the puppet-era "anti-communist Virgin Mother of Fatima" have even been revived! It is worth mentioning that all these "miracles" attributed to the Virgin Mother are more or less linked to a society and were almost all masterminded by those with an evil past.

After reviewing all these forms of invocations, we see that they never brought blessing and profit to the faithful, nor glorified Christ and the Virgin Mother; on the contrary, they caused chaotic thoughts and unstable living conditions among Catholics. Clergymen at some places have promptly used their power to thwart these regrettable abuses; but clergymen at quite a few other places have overlooked them.

Although imperialists and colonialists were swept out of our country, their impact on religious activities cannot be overcome overnight. Moreover, U.S. imperialists and their lackeys have not yet given up their plot of dividing and taking advantage of religion for the purposes of undermining our people's task of building and protecting the country. Everyday, by way of radio stations they disseminate a greal deal of vicious distortions aimed at inciting us to turn our backs on the nation.

Hence, to realize the determination to be closely attached to the fatherland's fate, to follow the people's traditions, and to mix with the nation's current life--in line with the 1980 pastoral letter of the Vietnam Bishops' Conference--our Church cannot avoid reexamining and correcting religious life patterns not consistent with the nation's current life; and at the same time, it must promptly combat all plots concocted by imperialism and its lackeys to divide and fish in troubled waters.

Constant vigilance about all plots of imperialism and its lackeys aimed at dividing and taking advantage of religion is a virtue which those Catholics who love Christ and humankind cannot lack.

BRIEFS

FULRO RALLIERS FETED--The provincial committee of the Fatherland Front coordinating with the Public Security Service organized a rallying ceremony for FULRO officers and troops returning to the people. The people and local administration have done their utmost to help the FULRO ralliers make a living. During the beginning of this third quarter, the provincial committee of the Front is concentrating guidance on winding up village and ward Front congresses, and on mobilizing the laboring people to continually step up the struggle against negativism, expose violations of socialist property, launch a broad movement to build new life among the people, and actively combat decadent culture and superstitions. PARTY ACTIVITIES AND GOVERNMENT

DIRECTIVE ON SENDING DELEGATES TO FIFTH PARTY CONGRESS

Hanoi XAY DUNG DANG in Vietnamese No 8, [Aug] 81 pp 1-3

[Directive No 113, dated 14 July 1981, of the VCP Central Committee Secretariat: "About Convening Party Organization Congresses of All Levels and Sending Delegates to the Fifth Party Congress"]

[Text] Carrying out the resolution of the 9th Plenum of the VCP Central Committee on convening the 5th National Congress of Delegates of the party, the secretariat has issued a directive on the need, meaning and ways to convene congresses of all levels and on sending delegates to attend the national congress of delegates:

1. The 5th Party Congress is being convened on the background of our party, people and army having strived to carry out the resolution of the 4th Party Congress, fought bravely, worked industriously, overcome many difficulties and scored great victories.

Beside the outstanding achievements like defeating the aggressive expansionist army, continuing the international obligation toward Lao and Kampuchea and particularly supporting and assisting the Kampuchean people in scoring total victory in their national salvation, we have also scored achievements in the socialist revolution. Recently the positive factors in the productive labor movement have led to realistic results in many localities and are promising greater results.

However, we have weaknesses and shortcomings in the implementation of policies, planning for the national economy, economic management, distribution and circulation management, leadership and disposition and organization of cadres as the letter of the VCP Central Committee sent to all party committee echelons, cadres and members has clearly indicated.

The national congress of delegates this time must be able to gather the brains of the party and people as a whole in order to further materialize the socialist revolutionary line of the party, to develop strengths and positive factors, to indicate the direction and measures to overcome difficulties and to correct shortcomings, to create in the period of the 5-year (1981-1985) plan and in subsequent years important changes in the socialist revolution, to strongly defend the socialist fatherland and to continue fulfilling the international obligation.

Since the party organization congresses at all levels this time are aimed at making really good preparations for the 5th Party Congress and ensuring good implementation of its resolution, the needs to convene such congresses are as follows:

- To emphasize the sense of responsibility, to broaden democracy and to ensure participation of party members and delegates in discussions of realistic subjects as suggested by the VCP Central Committee and committee echelons and their active contributions to making decisions about the common problems of the party as a whole and of individual party organizations.

- Through consideration and discussion of the proposed platform as handed down by the Central Committee and related to the realities of the localities and units concerned, to further strengthen the understanding of the party line and policies. On this basis, to step up preparations for proposals to be submitted by party committee echelons to the party organization congresses.

- To send very competent and qualified delegates to the higher-level party organization congresses or national congress of delegates; at the same time, to perfect the party committee echelons by giving them the very qualities required in accordance with Central Committee instructions.

- On the basis of ensuring the fulfillment of the above-mentioned needs, to contribute to creating a high degree of unanimity at the national congress of delegates, to strengthen solidarity and unity within the party and in individual party organizations and to create additional favorable conditions for a successful implementation of its resolution.

- Following the 5th Party Congress, to fully understand its resolution, to exercise serious self-criticism and criticism in connection with the strengths and shortcomings of party organizations and committee echelons, to perfect the proposals to be submitted to the party organization congresses and to ensure the latter's decisions being positive and having strong realistic bases.

2. The party organization congresses this time will be organized in two phases:

- Phase one: to discuss the proposed platform, reports on the situation and task and a number of matters in connection with revising the VCP statutes; to choose delegates to be sent to the higher-level party organization congresses or national congress of delegates.

- Phase two: this will take place after the national congress of delegates in order to review the implementation of the resolution of the last party organization congress, to fully understand and discuss the implementation of the resolution of the 5th Party Congress, to decide about the new task of the party organizations in the 5-year plan period of 1981-1985 (particularly in the period of the next term of the party committee echelons) and to elect new executive committees, in the case of expiration or near expiration of the current term. In the case of other localities, supplementary elections can be held or a number of party committee members can be replaced if the party organization congresses think it it necessary to do so.

At the party organization congresses at the basic level, the subjects recommended by the Central Committee for discussion will be decided later. For the localities where the term of the party committee echelons has expired, the provincial and municipal party committees still direct discussions of the subjects handed down by the Central Committee to prepare for the national congress of delegates, but the discussions of the task, goals and measures to be taken by the party organizations in their next term and the election of the party committee echelons should wait until after the national congress of delegates has been held.

Phase one of the party organization congresses at all levels will begin from the basic level at about the end of September 1981 to last until the end of October 1981, when the party organization congresses at the provincial and municipal levels and the congresses of the party organizations subordinate to the Central Committee will be held. The second phase will proceed with congresses of party organizations at the provincial and municipal levels in the first quarter of 1982, to be followed by district, ward and basic-level party organization congresses. After the 5th Party Congress the secretariat will issue a directive to provide guidance about the contents and ways to conduct phase two of the party organization congresses at all levels.

3. The election of delegates to attend the higher-level party organization congresses and national congress of delegates must be carried out in a very careful manner and strictly ensure the standards required.

Delegates must be outstanding party members being absolutely loyal to the party and having both good qualities and capabilities. They must especially be party members having unflinching political stand and total unanimity and thoroughly understanding the party line and policies, both domestic and foreign. They must represent the revolutionary fighting spirit and intellectual capacity of the party organizations, have practical knowledge and experience in their own field of activities and be capable of truly contributing to the subjects being discussed at the congresses.

The delegates to the 5th Party Congress must include many cadres of high and middle levels working in leading party organs, important committees and sectors and mass organizations at central, provincial and municipal levels; at the same time, there must be an appropriate percentage of them working in districts, economic, scientific and technical research institutes and production, business and professional installations.

Pay attention to selecting those comrades who have the ability to do work in economic, scientific and technical management. Pay proper attention to heroes and outstanding emulators in production and business units and in the armed forces.

Delegations, mostly of provinces and municipalities, must increase the number of workers among their members, with appropriate percentages given to delegates being woman and ethnic minority cadres (in the case of localities having ethnic minorities).

As to the numbers of delegates, on the basis of the general situation, the numbers of party members and the importance of individual party organizations (according to article 20 of the VCP statutes), and on the basis of the total number of delegates to be invited to attend the 5th National Congress of Delegates, the secretariat has decided to distribute delegates in accordance with the following principle:

The party organizations in the north and in the army: one delegate for every 2,800 regular party members. The party organizations in the south, where the number of party members, due to past combat conditions, is still small: one delegate for every 1,000 regular party members.

The party organizations in industrial centers: one additional delegate is allowed for every 30,000 workers.

The Central Committee will consider the nature and other importance of certain party organizations (such as where large numbers of central organs are located; importance in terms of national defense, security, foreign affairs, ethnic minority areas, etc.) to distribute additional numbers of delegates. Provincial party organizations, after having calculated the number of delegates on the basis of the above-mentioned conditions and finding that they still have few delegates, will be allowed to have additional delegates to total at least 11 delegates per province. The party organization of the Vung Tau-Con Dao special zone can also select a number of additional delegates.

Since the party organizations abroad (under the management of the Central Committee assisted by the Foreign Party Affairs Committee) cannot hold congresses to select delegates, their delegates will be named by the Central Committee.

Other party organizations subordinate to the Central Committee will select at least one delegate each, and depending on the importance of each of them consideration will be given to whether they should have additional delegates.

The Central Committee will also send a number of its members and high-ranking cadres of central organs to the party organizations subordinate to the Central Committee (including army party organizations) to run as candidates for election of delegates to the 5th Party Congress.

Electoral units can name a number of alternate delegates, who can if necessary replace the regular delegates who for some reasons cannot attend the congress.

4. To move toward the party organization congresses at all levels and the 5th Party Congress, after receiving this directive, all provincial and municipal VCP committees and committees subordinate to the Central Committee must prepare themselves to properly carry out the letter of the VCP Central Committee addressed to all party committee echelons and concerning convening the national congress of delegates.

On the basis of fully understanding the recent resolutions and directives of the Central Committee and Political Bureau (such as the resolutions of the 6th and 9th Plenums of the VCP Central Committee, Resolutions 26 and 32 of the Political Bureau and 36 of the Secretariat), we must step up the emulation movement, fulfill the 1981 state plan and do the party membership card-issuing job properly while at the same time consolidating the party bases, particularly the weak ones, perfecting organization and improving the work procedures. We must correctly place key cadres in different echelons and sectors, draft plans for cadres and at the same time make preparations for the election of party committee echelons in 1982.

On the one hand, provincial and municipal VCP committees and party committees subordinate to the Central Committee must provide guidance for convening congresses at the basic, district and ward levels in accordance with this directive; on the other hand, they must actively prepare for phase two of provincial level congresses.

The ways to prepare for and convene the congresses must correctly follow Directive 55 of 14 October 1978 and Regulation 12 of 4 February 1978 of the secretariat. The basic thing we must do is to attach importance to reviewing the actual situation, particularly in regard to economic leadership and party building in the localities and units concerned in the term, and learning lessons of experience from the drafting and fulfillment of the state plan, the measures taken to organize management, ideological work and organization in order to ensure the quality of the proposals and decisions at the congresses this time.

We must conduct the congresses in the spirit of being urgent and realistic while avoiding being formal and wasteful. Gathering public opinions must be done in the spirit of truly respecting the masses; questions are to be raised for the masses to discuss and to offer their own opinions, which must be carefully combined, considered and accepted and introduced to the party organization congresses at the basic and other levels for discussion and decision.

Committees and sectors at the central level, on the basis of the proposed platform reported at the 5th National Congress of Delegates, are to get prepared to present the problems within their own responsibilities so as to exchange ideas with provincial and municipal party committees about the important matters in connection with the work of each sector which the local party organization congresses must try to resolve. The central organizing committee relies on the adopted principles to calculate the distribution of delegates among the party organizations subordinate to the Central Committee and submits it to the secretariat for approval.

At present, beside the basic favorable conditions there still are many difficulties; the enemy is trying to destroy our country's revolutionary achievements and to deepen our shortcomings as he hopes to arouse the masses and to divide our ranks. To ensure a good success for the congresses all party organizations must emphasize their responsibilities; strengthen solidarity and unanimity; promote democracy; strengthen discipline; and struggle hard to successfully fulfill their tasks in the best and most effective manner, the tasks in connection with production, distribution and circulation, organization of living conditions, national defense and security.

PARTY ACTIVITIES AND GOVERNMENT

SUBWARD VCP COMMITTEE LEADS FIGHT AGAINST NEGATIVE SIGNS

Hanoi XAY DUNG DANG in Vietnamese No 8, [Aug] 81 pp 20-23

[Article by Nguyen Dinh Thu, secretary of Nguyen Trung Truc Subward VCP Committee: "Nguyen Trung Truc Subward VCP Committee Leads Fight Against Negative Signs"]

[Text] Nguyen Trung Truc Subward is a key unit in Ba Dinh Ward, with complicated political, economic and social aspects and a large population. Yen Phu Street, Hang Than Street, Hoe Nhai Market, Long Bien bus terminal, etc. are places where business activities are busily conducted and people go back and forth in large numbers day and night. Hoe Nhai Street, with houses accommodating nearly 100 households divided into two neighborhood teams, has been "well-known" because some of its residents were doing illegitimate business and there were delinquent youths and teenagers who had been stealing and acting as tough hoodlums. Long Bien bus terminal is an important communications center linking the capital city with many northern provinces. Thousands of passengers go through it everyday. This is also a place where lots of people have come to do dishonest business or to engage in illegitimate occupations.

In the subward there also are 21 organs, enterprises, schools and stores of the state. A number of units have had shortcomings in the management and protection of properties and materials. Some dishonest civil servants here have stolen gasoline and coal from the organs and enterprises to sell or have taken down some classroom doors to use in their homes. Others have encroached on the school grounds and illegally built houses, grown vegetables as their own gardens, raised hogs, etc.

In May 1980 Nguyen Trung Truc Subward was selected by Ba Dinh Ward as a leadership center for the fight against negative signs.

The standing committee of our subward VCP committee recognized the fact that fighting the negative signs was truly a facet of the class struggle and an urgent job to do right away. It divided among its members the task of getting to know the real situation among basic level cadres and neighborhood teams and of social order, etc. On that basis we suggested a plan and the goals for the fight in this phase. We determined that the neighborhood teams played an important role toward the subward and in this fight. Only by doing the job well from the level of neighborhood teams on up could the subward obtain good results from it.

Along with the subward people's committee, the VCP committee suggested five practical goals: 1. To check and review again the activities of cadres and party members, first of all the key cadres in the subward, and to firmly refuse to let any cadres steal, receive bribes and oppress the masses. To consolidate and further step up activities of neighborhood teams and mass organizations. 2. To prevent the people in the subward from stealing coal from the electric power plant. 3. To uncover and handle the nests of smugglers, bus ticket vendors, prostitutes and organized thieves. 4. To turn 18-20 Hoe Nhai Street into a house having a civilized way of life and social security. 5. To reorganize the management and protection of properties by the economic installations and schools under the subward's management; along with the management board of Long Bien bus terminal, to consolidate again the loading-unloading, food service and bicycles-guarding teams.

The VCP committee provided party chapters with guidance in drafting plans for leadership in the fight against negative signs in their own units, with assistance from cadres of the subward people's committee and area police chief, and stated the appropriate goals and measures to be taken to suit the situation of their streets. The party chapter at No 3, where there are 2 neighborhood teams in 18-20 Hoe Nhai Street, was selected by the VCP committee to assume leadership over an early assignment, from which experience in general leadership could be drawn. The VCP committee deputy secretary and chairman of the subward people's committee, in charge of the subward's working team in the fight against negative signs, were assigned to assume direct leadership at this location. Members of the VCP committee divided among themselves the task of assuming direct leadership over the street chapters and neighborhood teams as they developed their own plans for fighting negative signs.

To have good leadership over the neighborhood teams, the VCP committee attached great importance to creating unanimity of thinking and action in the party organizations, purifying the ranks of cadres and party members, asserting a high degree of determination and creating confidence among the masses. This time many cadres and party members did not believe the fight against negative signs would bring about good results. The reason was that there had been repeated appeals for such a fight, but the negative signs had remained undiminished. That happened not only in society but also among cadres and party members. The cases of thefts involving cadres of high positions and power had been either overlooked or prolonged, without any clear-cut solution. Some comrades who had not been thoroughly familiar with the leadership responsibilities of street chapters were afraid of "frictions" between cadres and party members and their families on the one hand and the people in the same streets on the other hand. They thought that these chapters would not need plans of their own and that carrying out the plan of the VCP committee would be sufficient. Almost all party chapter mambers were retired, old, weak and often sick cadres; in addition, since they no longer had any power, it was difficult for them to mobilize the people. Through discussions, combined with a thorough understanding of the secretariat directive on issuing party membership cards, the VCP and chapter committees helped party members to clearly see their responsibilities in the new work environment and to see that as a challenge for them. About organization, party chapters assigned work on the basis of each member's health, family situation and capabilities while sparing the really old members from any work. Party members then fully understood their task, enthusiastically participated in the work and vigorously mobilized all households for implementing the state policies and doing the work of the subward.

The VCP committee organized serious self-criticism and criticism in the party organizations. Each and every one of its members reviewed his own sense of responsibility toward the common work and the activities of his family. Three cases of alleged acceptance of bribes and revenging against the masses, which were positively reviewed by the control cell of the VCP committee, ended up with the conclusions by the appeal cells of the ward and municipal VCP committees to the effect that the allegations had resulted from a misunderstanding on the part of the masses or from personal hatred. Many party members criticized themselves for the shortcomings of their own and their families, such as having a poor sense of responsibility for their work, letting their wives deal in the lines of goods other than the ones being registered for, family troubles, having spoiled children, fighting for space with other households living in the same houses, etc. However, generally speaking, nobody in the party organizations had committed any mistakes so grave that the qualifications of party members were damaged.

Before starting the learning process among neighborhood teams, every cadre of the subward people's committee made a review in accordance with his own position and duties concentrating on three major subjects: stealing public properties, accepting bribes and oppressing the masses. Its overall review was presented at the conference of neighborhood team cadres and subward sector chiefs. The conference was held to carefully discuss the plan for extending the phase of the fight against negative signs to the entire subward population.

To drive the overall movement forward the subward VCP and people's committees selected a breakthrough location where there were many typical negative signs but conditions were favorable for being successful right from the beginning. Turning 18-20 Hoe Nhai Street into a neighborhood team having civilized way of life and social security was a goal in the subward's plan for fighting the negative signs. There were there many occupants and many forms of negative manifestation of society. The VCP committee had realized that the effort to overcome the negative signs there would encounter quite a lot of difficulties, but if the work were successful, it would affect the entire subward. It then ordered the party chapter at No 3 to do its work first, for the chapter had the tradition of solidarity and straightforward fighting, with its members having a good sense of responsibility and the ability to lead the work toward good success. It popularized in time the experience of this chapter in preparing for learning and organizing the fight against negative signs throughout the subward. Party chapter committees helped neighborhood team leaders to make reports on the situation and to guide the people in their learning and making criticisms. They held meetings among the party members who were cadres and state workers and lived with their families here to let them know very well the policies and plans of the subward and neighborhood teams for fighting the negative signs and to ask them to offer their own ideas so that the street chapters could provide good leadership for the work and at the same time to persuade members of their families to carry it out in an exemplary manner and to take part in the learning process and the fight. A number of party members who were enthusiastic and capable were invited to assist neighborhood team leaders in preparing for the plan and providing guidance for the learning process.

Thanks to good preparations, as the neighborhood team of house No 18-20 began the learning session, the cadres who had correctly analyzed the negative characteristics of its members now honestly criticized their wrongdoings and thus succeeded in mobilizing the people for enthusiastically participating in the discussions. The masses found that it was a truly democratic work involving from the party organizations and the administration to the people and realized their responsibility for taking part in the fight and helping to put an end to the negative acts that had been taking place right where they lived and in their neighborhood in general. Many people voluntarily admitted their share in the shortcomings which had further worsened the ill and promised to correct themselves. Others said their families failed to educate the spoiled children and suggested that if the latter did not improve even with the assistance of the mass organizations and administration, they would voluntarily let them go to the reeducation camps. Still others criticized themselves; one admitted that he used one registration permit to open three stores and sold wheat flour and other goods acquired by thieves. Two households dealing in smuggled buffalo meat and beef admitted that their activity was illegal and encouraged thieves to kill animals and thus to harm the draft power in agricultural production. Since then these families have gone through the procedures of business registration and have paid taxes to the state. Thefts and acts of hooliganism later ceased to happen in the neighborhood. The results of the learning and the fight against the negative signs also affected other teams and created a momentum to drive forward the movement in the entire subward.

However, the negative signs in society still remained and affected day after day, hour after hour, the life of the people in the subward, with adverse effects on their learning, struggle and criticisms. Consequently, the subward VCP committee adopted this policy: to further develop the results of the learning; to criticize in order to heighten everybody's awareness and responsibility; to mobilize the masses for uncovering and denouncing any wrongdoings; to combine educational, economic and administrative measures; to organize raids against people doing illegal business; to control the market and streets; and to gradually prevent and drive back negative acts.

Neighborhood teams criticized one another to help find and correct shortcomings; at the same time, exposed illegal activities like stealing, accepting bribes and oppressing the masses; and unmasked the hoodlums and hooligans hiding in their streets. The people's committee and public security force of the subward, upon denunciation by the people, solved many cases of stealing state properties and took action against a number of people who had been disturbing the peace and security, seizing land and houses, showing or keeping decadent movies and cultural products, etc. In 1980, the public security station in the subward handled 30 cases of thefts of state properties valued at hundreds of thousands of dong, in which some cadres and enterprise employees colluded with dishonest people and sold in the market 750 kilograms of laundry detergent and 500 packets of firecrackers; confiscated and seized tons of soybeans, wheat and chemical salt, hundreds of liters of gas and oil, etc. which had been stolen elsewhere and brought into the subward; investigated and set up 52 files of hoodlums and hooligans and recommended that they be sent to reeducation and hard labor camps; and organized learning of state policies and laws and sent more than 50 people to work sites for failing to show any progress following a period of reeducation. The public security organ discovered and retrieved dozens of bicycles and portable fans, clothes and personal jewelries valued at 250,000 dong which had been stolen by the hooligans, returned them to the people and thus won the confidence of the masses, who voluntarily participated in larger numbers in the movement against negative signs. The subward people's committee made a petition and suggested that the higher authorities take back 100 square meters of dwelling and turn it into a grain store, for the housing facility had been requested by a unit that had been looking for some office space, but later was used as a dwelling for its members.

Various forms of propaganda and campaigning, such as disseminating news over the wired radio network, mobile exhibits of pictures of the different kinds of crimes and negative acts that had been handled, etc., helped mobilize the masses and strengthen their fighting spirit. Further developing its first success, the subward reorganized the service teams working in public places and street counters. Those places were where illegal activities and deals had been taking place and the bad people had been gathering to disturb the peace. Nearly 300 owners of restaurants and refreshment counters had an opportunity to learn the state policy on business, the regulations about sales of goods and the responsibility for maintaining order and security in the subward.

The efforts to stabilize order and to fight the negative signs at Long Bien bus terminal were related to the activities of the subward population, particularly along Yen Phu Street. Assigned the job of maintaining order at the terminal and joining with the sectors concerned in the ward, the subward took many positive measures. The subward people's committee conducted an investigation and classification of the service organizations operating in the terminal, where the bad people usually gathered to deal in tickets, to steal, to cause disturbances, etc. Loading-unloading units, pedicab units, etc. were reassigned and additional service teams were organized, with good people being put in them to serve as a hard core and to assist the committee and public security station of the subward in controlling in time the activities of bad people. As a result, a part of the negative activities there was successfully prevented.

Patrolling and control were actively carried out. Through the movement against negative signs, the ranks of protection cadres and the self-defense detachment were consolidated and tested and their activities were properly coordinated. Under the slogan, "Youths of the capital unite, fight and maintain its security," the youth force of the streets and in the self-defense detachment and subward public security force became a hard-core force that motivated the all-people movement to take part in patrolling and maintaining the subward's order and security. The youths regularly checked the streets and public places. The sales counters that had popped up illegally or violated the regulations on the civilized way of life were all torn down. The "open-air markets" that had just begun to appear were immediately dispersed and driven away. The hooligans and smugglers from different places who gathered around the bus terminal and other public places in the subward to engage in swindling, picking pockets, doing illegal business, etc. were raided and dispersed, with files being set up and sent to the higher authorities for appropriate handling. In the past year, dozens of hooligans who had escaped from reeducation camps were arrested; 4 pistols, 100 rounds of AK ammunitions, 28 kilograms of explosives, 206 detonators, nearly 40 knives and bayonets and hundreds of thousands of dong were seized. Cases of criminal offenses around the bus terminal were fewer than before. Dealings in bus tickets were no longer as open as before.

To coordinate the activities against negative signs the subward VCP and people's committees also invited the heads of the organs, enterprises and stores located in the locality to meet with them in order to inform them of the subward's plan now under way; to point to the tricks used by the bad people to steal materials from organs and enterprises and the negative phenomena committed by cadres and civil servants in state organs, whose families lived in the subward; and to draw their attention to the need for strengthening the management of public properties, cadres and civil servants and for assisting the subward in effectively fighting against negative signs.

As a result, in the past year, the political security and social order in Nguyen Trung Truc Subward were maintained and there were no large-scale violations. The movement and struggling spirit of the subward population in the fight against negative signs were elevated to a new height, thus creating favorable conditions for the subward's party organizations and people's committee to successfully carry out its task. The Nguyen Trung Truc Subward party organizations were commended by the Hanoi Municipal VCP Committee and awarded the "1980 Strong

Party Organization" banner. The subward people's committee was awarded a letter of commendation from the Municipal People's Committee for having "fulfilled its task" and won the title of progressive unit of 1980. The public security, self-defense and protection forces of the subward were recognized as "determined-to-win units."

However, that is only a number of initial results of definite limits. It has been proven in reality that fighting the negative signs is a complicated job that requires a coordination of the activities of all sectors, echelons, organs and units and simultaneous educational measures of economic and administrative nature to be taken on the basis of heightening the masses' spirit of self-understanding and action. Within the limits of our responsibilities, the VCP and people's committees of our subward will strive to further develop the results already obtained and to score greater achievements.

FATHERLAND FRONT OFFICIAL STRESSES NEED FOR VCP LEADERSHIP

Hanoi DAI DOAN KET in Vietnamese 30 Sep 81 p 2

[Article by Ngo Ton Dao, chairman, Fatherland Front Committee of Minh Hai Province: "Some Thoughts on Fatherland Front Work at Grassroots"]

[Text] We have learned from experiences in Minh Hai Province that the Front must have the active leadership of party committee echelons and party organizations to carry out properly its functions and tasks. Such leadership is a decisive factor. Without close party leadership, there can be no fine achievements in whatever field, be it economic, political or cultural.

That is why we warmly welcome having party committee members in charge of mass agitation or the Front as Front committee chairmen, especially at village and ward primary levels. The reason is that these very comrades are convenient links that coordinate the Front and mass organizations to do common work. For timely guidance, each month or quarter party committee echelons should hear reports from mass organizations within the Front on the general situation of their mobilization work. At present, not all party committee echelons are interested in mass organizations and Front work. In many places, as well as in our Minh Hai Province, mass organizations and Front work still is very weak because party committee echelons have not shown appropriate attention, particularly at the primary level. Party leaders, including the general secretary, have recalled many times the indispensable role of mass organizations and the Front within the proletarian dictatorship system, particularly at the primary level. Mass agitation is very important and necessary, just like air is very important and necessary to human beings. We cannot touch air, nor see it. But we cannot live without air. At present, the organization of the Front and mass organizations--especially the former--is still slow, and the people's right to collective ownership is not yet well developed. Hence, in many places the administration still has weak support, and party building forces are not yet strong, exerting a tangible influence on the revolutionary movement of the masses.

The roles and functions of mass organizations and the Front have been acknowledged by the new Constitution. We suggest that the Party Secretariat issue directives emphasizing more the Front's role and functions, paritcularly at the primary level.

Aside from objective mutual help, we also see another strong need--that is procedures and policies for cadres doing Front work. Driven by their dedication to socialism and communism, and by their pride of and enthusiasm about their accomplishments, cadres of both sexes volunteered for the job despite many difficulties. But in the present situation there are many more difficulties confronting the living conditions and work facilities of these cadres, particularly those working in villages and wards, causing an unmistakable impact on Front and mass organizations work. We and other provinces have also suggested many times that the central echelon focus on solving irrational and unjust discrepancies in allowances and work facilities between cadres of the Front and mass organizations and those of economic branches. These comrades are aware that cadres at the primary level must do productive labor to make a living and take part in the revolution, but they also see the need for fairness in party and state policies and procedures toward cadres from various branches working in basic installations. We also see that to achieve good results mass mobilization work must be backed up by suitable organizations. Organize middle-aged males and Front organizations. Ward executive committees of senior citizens in Ho Chi Minh City and a number of provinces have assembled all population strata to mobilize them. But, for organizational purposes we suggest that it would be better for the Central Committee of the Fatherland Front to make it clear which organizations should be organized nationwide on a unified pattern so that all localities can follow suit simultaneously. At the same time, since cadres play a very decisive role in Front organization at all levels, especially at the primary one, we must train and consolidate key and core cadres specializing in doing Front work. Without competent core cadres, capable of knowing how to mobilize the masses and of understanding thoroughly party policies toward the Front, there can be no good results.

Taking part in the revolution is a mission of the masses under party leadership; however, the party must lead the masses through mass organizations, mainly worker, peasant, youth and senior citizens organizations and the Fatherland Front. The party and state cannot act for these organizations; instead, the role of mass organizations and the Front must be adequately promoted in order to avoid bureaucratism and authoritarianism. Only close coordination between the three components--party, administration, and mass organization of the Fatherland Front--can successfully promote the combined forces of the proletarian dictatorship bloc, and the right to collective ownership of the laboring people, so as to support effectively socialist building and protect Vietnam's socialist fatherland.

ECONOMIC PLANNING, TRADE AND FINANCE

END TO DIVERSION OF STATE GOODS URGED

Hanoi PHU NU VIET NAM in Vietnamese 30 Sep-6 Oct 81 pp 1, 3

[Article by Hoang Tuyet Nhung: "Can We Put an End to the Diversion of State Goods and to the 'Skimming' of Customers Merchandise?"]

[Text] Widespread Forms of Diversion of Goods in Transportation and Wholesale Trading

A ship carrying agricultural goods comes to Port H. Normally, as soon as the ship reaches the port the merchandise should be unloaded at once. But this is a case of "pilferable" commodities, which is why the receiver-transport side--which does not belong to the internal trade sector--raises the question with the commodity holding side: "Sell us some of the peanuts at the old price." The "old" price means the subsidized price. The other side--which belongs to the internal trade sector--refuses. And so the commodities just get stuck on the ship. Thirty, forty days go by, and the soja bean and the peanuts have started to show mold.

At the beginning of the year, after having supplied to the Vong Xuyen selling and buying cooperative 2,370 pairs of plastic slippers the General Merchandise Corporation of Phuc Tho District (Hanoi) demanded that it be allowed to buy back 330 pairs for purpose of internal distribution. Even more serious is the case of the (old) V Corporation which supplied the Electric Processing sector with material so that the latter can have insulating adhesive added to it through contracting out to a handicraft cooperative in Ba Dinh, Hanoi, then asked to "buy back" from the same 2,500 meters of material. Showing itself to be a liberal partner, beside the amount that the Corporation asked to "buy back," the cooperative even sold 4,629 meters more to the corporation. The V Corporation then sold the whole amount of materials it got, 7,129 meters, at 16-18 dong per meter and distributed the profit among its own people.

Hiding itself behind the pretext of "taking care of the living conditions of the workers," a certain general merchandise store which has 130 employees has chosen to sell "internally" 2,344 cakes of perfumed soap, 230 kilograms of powder soap, 920 kilograms of toothpaste, all at subsidized prices. Each employee has thus made quite a "return" on the commodities.

Underweighing in the Retail Link

In the retail link it is not uncommon that the state store person tries to take a little away from the commodities being handed over to the customers at weighing or measuring time. When measuring oil he or she would dip the measuring cup into the oil can forcefully then slightly tilt the cup so as to spill the oil. With a little bit of oil spilling out of each cup, the store person in the end manages to take away from the customers 5 percent of the oil that should go to the latter. Since there is such a profit it doing it that way, in a very short time the oil measuring devices that were supplied to the stores were immediately forgotten and left in a corner. The reason clearly is that the store person prefers to do the measuring herself or himself so as to cheat more easily and take some away from the customers.

When weighing vegetable, the store person tends to throw a whole big fat bunch on the scales so that there could not be any accurate weighing. Moreover, the buyer also does not often pay attention since state store vegetables have always been known to be very cheap. People tend to buy half a dong or one dong of vegetable, very few people buy half a kilogram or one kilogram of vegetable, which makes it all the easier for the store person to weigh under the required amount.

We can go on listing the many ways that the store persons can cheat by having their cuts like: pouring fish sauce into bottles at a lower level than stipulated; packaging monosodium glutamate by leaving out a couple of lumps each; pouring beer into cups and making sure that there is plenty of froth so as to fill the cup fast, etc. Little by little, each day something is taken out and accumulated, and the trade sector employee who does not have integrity would collect a not unimportant amount of profit. What are we to think of such abnormal phenomena as a low-salaried store person with a truly fine home, full of comfort, who would go about well-dressed, with gold necklaces and gold rings around the fingers!

It is clear then that the idea that runs like this, "The store keepers are poorly paid, which is why they have to make up by undercutting here and there," is completely wrong. For in our society it is not just the store keepers who are paid low salaries, many other people are paid poorly too but they do not pretext that in order to cut into the property of the state and of the people. In fact, in the trade sector itself there are other store keepers who are paid the same way and yet they remain honest and keep their integrity. The realities of the situation have clearly proved that these bad elements are denatured people, they do not stop at the level of making up for the little that they are paid; because of their ever-growing greed they keep on taking cuts out of the transactions at an ever-increasing rate.

Need for Continuing and Doing Better What We Have Been Doing

The above-described ways of cheating on commodities are being practiced almost everywhere. Is it true that everywhere we are condemned to accept the situation, having absolutely no way of overcoming it? We have seen the case of many units having effectively overcome the situation.

Going back to the ship that carried agricultural goods mentioned above, the level 1 agricultural products corporation had refused to sell the goods; instead, what it did was to propose to the transport people that if the latter could unload the ship in only a few days, they would be paid 1 dong per ton extra as a reward, which is stipulated in corporation policy. As a result the ship was unloaded in no time without having any part of its shipment being "sold." Also at this corporation there had once been printed and woven a number of good mats meant for internal rewarding and distribution. But now the mats have been turned over to the business commodities fund of the corporation, and instead of looking after its own people's living conditions in the form of rewards in kind the corporation has pushed forward production and animal husbandry. The employees and workers in the corporation put in working days and are allowed every month to buy 1 kilogram of meat and every year to buy 10 kilograms of rice at reduced prices.

To avoid losses on the way during the transportation link, the Bicycle and Motorbicycle Corporation organizes the checking process down to the rare and expensive accessories and parts before they would put them in storage, not limiting itself to the bulk merchandise as before. In receiving the merchandise in this manner, the corporation also makes it a point to be very careful in letting merchandise out. Thus when parts and accessories are sent by plane, before packaging they get bored into, strung together and tied in very careful fashion. It is for this reason that the situation of chains or hubs, etc. getting stolen has fallen down dramatically. Also at the Petroleum Corporation at one point the drivers used to pour water into the tanks in order to extract the oil. During only one year there had been 100 cases of fully reported cheating like this in the petroleum transportation link of Hanoi, resulting in 21,500 liters of water which got mixed in the oil. When the drivers got questioned, they put the responsibility on the storage people. When the latter got questioned, they blamed it on the tankers. The blame just went around with no one willing to pay the fines. Now the corporation has provided for clearcut control at every link. When they receive the oil, the storage people have to check immediately to see if there has been water mixed in with the the oil so as to guarantee that the oil in storage is always 100 percent oil. When they receive the oil from the storage tanks, the drivers have to check at once to see that they get no oil mixed with water filling into their tanks. In this way, as soon as water is found in a certain link it would be discovered at once and responsibility can be determined. By now the mixing of water with the oil for purpose of stealing the latter has gradually been reduced, and in 1980 the entire corporation has had only one report of such cases.

In the distribution link too there have been applied many effective ways of fighting the "skimming" of commodities. In Hanoi and in the larger cities fish sauce has now been bottled while sugar and monosodium glutamate are readily packaged. Hanoi has pilot tested the selling of vegetable by the bunch so that the store keeper can sell not only quickly but also as a measure to cut down on the underweighing. A number of large stores have also set up scales and measuring rods so that the customers can do the measuring and weighing themselves. The trade sector is having and has made many efforts to stop altogether or gradually cut down on the situation of commodities being "skimmed off."

In order for this work to be truly effective, we believe that these positive management measures must be carried out together and on a permanent basis in the various trade units and that there must be established a really tight and close control regime so as to regularly discover and stop cases of violation right from the start.

Parallel with the tight management, the disposition of various cases which do occur must be taken care of in rapid, timely and thoroughly strict and just fashion. Without dealing severely with the culprits, we cannot ever purify the ranks and it will be impossible to put the trade work on a new management track. We need to go over the way we have been dealing with earlier violations such as the transfer of people from store keeping to storage work or packaging for a time, then to go back to store keeping, or even the case of people being transferred only from one store to the next, etc. The complete expulsion of people unqualified for service in the trade sector and their replacement by good, qualified people is an absolute necessity.

The struggle for stopping and cutting down on the skimming of commodities must first of all be carried out within the trade sector, but it must also have the cooperation and participation of every other sector, of everyone, of even the customers who daily are in contact with the trade sector in their daily shopping.

CAUSE OF HIGH SOY BEAN PRICES

Hanoi PHU NU VIET NAM in Vietnamese 30 Sep-6 Oct 81 p 3

[Article by D.L.: "To Have It Cheap!"]

[Text] At present the procurement of goods in such quantity as to have enough to sell to the people is the strategic mission of the trade sector. Among the major commodities soy bean plays a very important role since it is a rich source of protein in the meals of cadres', workers' and government employees' families, needed in the dipping sauce production industry, etc. Yet the price of soy bean in the North is still much too high, thus influencing the price of tofu, the price of soy sauce, the price of "tuong," etc. Why is it that way?

This is because soy bean has not yet been sent directly from the producing areas to the consumers, it still has to go through too many intermediaries as in the present situation. Let us take as an example the procurement of soy bean in a soy bean producing area: The soy bean is collected and bought by the sellers and buyers cooperatives which then collect it for procurement to the district. The district then sells the soy bean to the level 1 provincial corporation, which then sells it to the level 1 central corporation, then the soy bean goes from the central corporation to the planning commission which then sells it to the provinces in the North such as Hanoi, Haiphong, Quang Ninh, etc. The provincial corporations in these municipalities or provinces then set up plans for selling it to the various organs within the province. It goes without saying that the soy bean sold to the consumers units represents only a number that is transferred from one piece of paper belonging to this echelon to another belonging to that echelon, and through each echelon the cost of the soy bean is slightly raised because each trade echelon in charge of the control of commodities must have its profit cut; as for the soy bean, in reality it still stays in the district or province which produces it. The units or localities in need of the soy bean can find transportation to go to the district or province in question to get the soy bean, which by now costs 1.5 times more than the original price!

Thus, it turns out that the workers have had to buy soy bean at an inflated price simply because in it there is found also the cost for running the excessively cumbersome trade machinery.

The internal trade sector needs to rectify its management and organization so as to make it light and render the procurement process the most effective possible. This should apply not only in the case of soy bean but also in the case of many other commodities: one should have to go only through one corporation and at the most through a second intermediary corporation in order to get the goods to directly arrive at the consumer place in the shortest possible manner. Only then can we have goods at reasonable prices and only then can the trade sector be said to fulfill its responsibilities in accordance with the conscience of a socialist trade sector.

POWER OUTAGES SLOW PRODUCTION PLANTS

Hanoi HANOI MOI in Vietnamese 16 Sep 81 p 3

/Article: "From Enterprises to Work Sites, An Investigation Is Needed"/

/Text/ Under the present difficult situation of electric power supply, every enterprise and work site wishes priority in order to achieve smooth operation!

Naturally however, every primary level unit cannot achieve that requirement. Even those units with complete priority for this or that reason still suffer continuous outages of electricity which cause great obstacles to production. The Xuan Hoa Bicycle Factory works under these arduous circumstances. The Bearing and Chain-Sprocket Wheel enterprises in Dong Anh have been told they have priority in electricity for two continuous shifts but have suffered two power outage "high points" and therefore, technical regulations have been interrupted and obstacles caused in tempering and grinding metal to make the products.

These enterprises are requesting that, if the electric power situation is too extended, they temporarily work one shift but that one shift must have continuous electric power in order to support tempering and grinding operations. This reasonable and sympathetic request is being considered by the Electric Power Service.

Meanwhile, a number of primary level production units being supplied a relatively large amount of electricity are not striving to promote production. At night, the electric lights are bright but the sound of machines is too quiet. If only the families in collective areas could "rely on" the source of electricity of the enterprise and work site, daily living would be fairly comfortable and pleasant!

Isn't an investigation necessary? Facilities requiring priority must be given priority at the proper level. Locations not yet deserving priority or without conditions for promoting production must be handled in accordance with a general system in order to avoid electric power waste. Isn't this more reasonable?

PEAT MINING ASSISTS COAL CONSERVATION

Hanoi HANOI MOI in Vietnamese 16 Sep 81 pp 3, 4

/Article by Quang Cat: "Peat and the Conservation of Coal"/

/Excerpts/ The output of mined coal at the present time does not yet promptly answer the requirements of the national economy. Coal transportation has also encountered many difficulties due to a lack of means and fuel. Due to a lack of coal in Hanoi, factories have at times been forced to halt work for weeks at a time with others working at a reduced level.

We all know the importance of coal conservation in production and consumption. In the face of the present situation, this problem is a critical requirement. Coal conservation must be uniform in many steps, from production, screening and transportation to use. In use, there are also many methods: improving furnaces, rationally utilizing the various types of coal, establishing correct and scientific levels of coal use, etc. In this article, we will deal only with the conservation of coal by using peat as a fuel in coordination with the construction of improved collective ovens, etc.

Peat in Hanoi

According to the results of a preliminary investigation, there are in Hanoi up to 12 peat mines in the districts of Me Linh, Dong Anh, Thach That and Ba Vi with reserves of tens of millions of tons. Me Linh District has Ngoc Thanh; Dong Anh District has Lo Khe, Mai Lam and Dai Mach; Thach That District has Ca Muc, Vuc Giang and Tien Xuan; and Ba Vi District has Dong Mo, Dong Quit, Tan Linh, Tram Me and Cam Linh.

Of the 12 mines above, the seven worked first have been Ngoc Thanh, Lo Khe, Ca Muc, Vuc Giang, Dong Mo, Dong Quit and Cam Linh. Mining has been conducted only during the past few years primarily using the peat as a packing material for 2-compartment privies and as a fertilizer in areas of acid and saline soils. The Mineral Coal Enterprise of the Industrial Service manages and mines the peat. Because requirements have not yet been clearly or concisely established, mining has not been promoted, the amount mined has only been to the extent used and there have even been many times when mining has increased but the peat has not been immediately used, allowed to decompose and greatly decrease in quality.

A study of the quality of newly mined peat has indicated that it has a high moisture content but the level of volatile matter is high and ashes are few so if the moisture is eliminated, the peat may be burned. However, in order to maintain a lasting fire, the peat must be mixed with a fixed amount of Quang Ninh coal. The use of peat as a fuel is still limited. A number of locations in Ha Son Binh and Ha Bac have used peat mixed with coal to bake construction materials with good results but only at the experimental research level. Among the people, there are a few scattered users. Recently, a number of units have achieved effective use, one of which is the People's Police Officers School.

Peat Mining Must Be Expanded

Through the experiment at the People's Police Officers School, we have concluded that: peat can be used as a fuel for collective messhalls with advancement toward use as a fuel for furnaces to bake construction materials and dry grain and agricultural products. The full utilization of peat in the local area for the local area is both economical and resolves the difficulties in transportation means and coal conservation.

Although our coal is the "black gold" of the fatherland, mining is not easy. Of the production costs of coal, 70 percent are foreign exchange (gasoline-oil, vehicles-machinery and material supplies-technology) and the state must compensate for a great many losses, each year tens of millions of dong. Coal production is difficult and transportation also encounters many difficulties. In Hanoi, some agencies must go all the way to Quang Ninh to obtain coal. An illogical fact is that gasoline and diesel fuel (high level fuels) must be used to power vehicles for transporting coal (a low level fuel). Therefore, the mining of peat in the local area for use as a fuel to conserve coal is an urgent matter.

In order to solve this problem, agencies are necessary to manage and organize mining under the technical guidance of the mining and coal sector. Mining must be conducted precisely in accordance with technical regulations. Mining output not used fully in the local area may be sold to coal supply corporations at a reasonable price. The coal saved may be exported to obtain foreign exchange. Both the local area and the state benefit. Peat quality also must be carefully analyzed to asertain the amount of good or bad peat and a study must be made to see in what jobs the peat may be used such as firing furnaces to make porcelain and glass, etc. Even in the use of peat, conservation must be practiced.

Under the present circumstances, the mining of peat for use to replace part of the coal is an extremely essential matter. Therefore, concerned agencies must promptly formulate immediate as well as long-term plans in order to achieve good results in this work. Because this is both an economic and a scientific problem, organization, scientific work and at the same time clear accounting are necessary before effective results may be assured.

HEALTH, EDUCATION AND WELFARE

INEQUITABLE DISTRIBUTION OF MEDICINES CRITICIZED

Hanoi PHU NU VIET NAM in Vietnamese 7 Oct-13 Oct 81 p 3

["This Week's Topic" column by Binh Minh: "This Needs Looking Into"]

[Text] From the standpoint of service the health sector always pays attention to expanding the health network so as to provide the most timely and convenient care to the patients.

However, ordinarily the amount of medicine that gets to the patients at the village level or in the various organs and enterprises does not come to much. In some villages the people go to the clinic which does not have medicine to sell, let alone having medicine for free distribution?!

Reasons? First of all there is no fair distribution of the medicine. In 21 villages in Ba Vi District the distribution of medicine is extremely arbitrary: if one goes by the distribution figures per capita one will find that populous villages may be given a share 4 or 5 times smaller than others, and there are medicines which the populous villages are given several tens of times fewer than other, less populous villages. Secondly, the medicines do not reach the patients. The medicines which the villages receive are redistributed in part to the cadres while the rest is arbitrarily used by the village health service according to the latter's own whims or to serve a few persons' interest, not to say that some get sneaked outside to be sold to speculators.

The situation is no better in a number of organs and enterprises. When they come for treatment the cadres, workers and employees are given a few laxatives or cold pills; in some cases the situation is so bad that they are lent a rubbing balm with the provision that it be returned afterwards. Only those fawning after or greasing the palms of the health personnel get decent medicine.

According to data provided by the health sector the amount of medicine provided to the various organs and enterprises and villages comes to 50 percent of the total amount of medicine produced every year, the remaining 50 percent being provided to the hospitals, which are to be supplied to the cadres, workers and employees when they come for treatment, and which can also be sold to the people. Such a huge amount of medicine should not cause any problem if it is fairly distributed, well managed to insure that the medicine actually reaches the patients. The problem can absolutely be taken care of better had the health sector, the village authorities and the leadership at various organs and enterprises truly concerned themselves with the patients plight, acted conscientiously, and closely supervised the matter.

HEALTH, EDUCATION AND WELFARE

REASONS FOR MEDICINE SHORTAGES DETAILED

Hanoi PHU NU VIET NAM in Vietnamese 7 Oct-13 Oct 81 p 2

[Article by Thanh Luong: "Is It True That We Are Extremely Short of Medicine as at the Present Time?"]

[Text] Editor's Note.- Recently the Ministry of Health and a number of health services, especially the Health Service of Hanoi, have implemented a series of positive measures meant to fight negative phenomena in the use, management and distribution of medicine. Through investigation, PHU NU VIET NAM would like to discuss a number of issues that are the concern of readers in recent days:
--Why do we have medicine shortages?
--Is the use, management and distribution of medicine satisfactory?
--Can we have good use and management of medicine so as to serve the patients where they are needed?

In recent days the amount of medicine that is available for purposes of prescription is woefully deficient. Oftentimes it is no easy matter to go and buy even quite common medicine in the pharmacies. Given a prescription, the patients often have to throw it away because there is no way for them to buy the medicine prescribed. In many instances, the patients may be hospitalized but the medicine would still have to be bought outside.

At Ky Dong Hospital in Haiphong, many hospitalized cadres, workers or government employees do not have the medicine they need but they encountered hospital personnel selling medicine to other patients. In August 1981, at Saint Paul Hospital in Hanoi, there was the case of a child being treated for meningitis, and the family had to find the money to run around outside the hospital in order to find the medicine which at one time cost it 1,400 dong! That was only two out of any number of situations where the patients are forced to save themselves because if they were left to the good office of the hospital, the latter would be entirely impotent.

In actuality, when we met with the comrades in charge of medicine in the health department, with the comrades at the General Pharmaceutical Corporation, and with those at a couple of local pharmaceutical corporations, what we learned was that the medicine being sold every year in the entire country had not shown any dramatic increases. It is true that the medicine imports have declined somewhat but next to it, the amount of medicine produced locally from raw materials produced inside Vietnam has been relatively adequate to substitute for it. If one takes one kind of antibiotic or another then it is true that it may have proportionally declined but there are other antibiotics or medicine such as Streptomicin or Pred-mi-so-lon whose production has increased or even grown several times what it used to be. Generally speaking, with the amount of medicine we have in the country the present dearth of medicine which we are experiencing does not make sense. Especially in the case of the hospitals which enjoy priority number one when it comes to supply of medicine, the amount destined for hospitalized patients should be considered relatively sufficient.

Then what is the reason for the great dearth?

Through investigations we have found out that the dearth may have come at various links: from the manufacturing link to the storage link, in transportation, in the distribution and use of the medicine. What is most alarming is that the amount of medicine sold under the counter by the pharmacy personnel and sold in accordance with arbitrary prescriptions issued by doctors accounts for 70 percent of all the shortages.

In a number of pharmacies it is not uncommon to find personnel who act as if they own the place and sell the medicine arbitrarily to friends and relatives, who act in collusion with doctors or even sell under the counter of their own initiative. All the personnel of the pharmacy at Cau Rao store (Haiphong) have managed to sell under the counter a huge amount of medicine. In Ha Son Binh a woman pharmacist in charge of the distribution of medicine at the tuberculosis station acted in collusion with a person in charge of drug sale working for the provincial hospital in order to sneak out and sell medicine outside for two consecutive years! Not so long ago, in May 1981 two persons in charge of drug sale at the Soc Son store (Kim Anh, Hanoi) managed to ship out 3 times medicine which they sold to speculators for over 1,000 dong. In September 1981 two personnel belonging to the Lan Ong drug store (Hanoi) wrote out prescriptions for themselves to buy 400 dong worth of medicine in one day.

As for the situation of doctors in hospitals writing out illegal prescriptions for acquaintances or even "phantom" prescriptions so as to secure medicine for irrational purposes, it is also quite widespread. In one unannounced control phase carried out at the Vietnam-Czechoslovak Hospital in Haiphong by the Ministry of Health 7 "phantom" prescriptions were discovered in 10 spot checks, and at the Saint Paul Hospital in Hanoi out of ten prescriptions there were 8 "phantom" ones, plus 1 written out for an acquaintance. When one tries to check on the addresses of the patients one could not find them. And what is special is that the medicine prescribed in these prescriptions all happened to be rare and expensive kinds which fetch a good price in the black market: the value of a "phantom" prescription is usually 3 to 6 times, sometimes 10 times, the value of a regular prescription given to a real patient!

Five days of control during July 1981 carried out at the drug counter meant to serve the Vietnam-Cuba Hospital at number 9 Hai Ba Trung, Hanoi, yielded 148 irregular prescriptions out of 148 that were brought to the counter. On 24 August 1981 when there was a new shipment of De-ca-rit hookworm medicine that just arrived, within two hours the counter received 31 prescriptions asking for 91 pills, out of which there were 13 duplicate prescriptions and 2 meant for one person; also, all the 31 prescriptions came from one doctor!

Also at this counter, when the stomach ache medicine Cavet which was difficult to find in the market (in August 1981), a pediatric doctor issued a number of duplicate prescriptions for several children who were troubled all at the same time by stomach aches, laryngitis or neurasthenia. The same doctor also prescribed stomach ache medicine for a four-year old boy.

At another hospital it was done more subtly. Some doctors in writing out prescriptions for the patients do not forget to add to it some other medicines for their own purpose and make sure that the patients buy them for them, thus "legally" accumulating over 1,000 pills of Pred-mi-so-lon in a mere 3 months.

Now if there are all these variegated ways of getting the medicine out into the black market, drawing from all these sources and links, then one must wonder where one can get medicine for the patients--those who actually need them?

It is our hope therefore that the health sector come up with a strict distribution formula so as to insure that the medicine reach the patients and that it be coupled with increased control and checking of its own ranks of cadres, workers and employees. There must be appropriate sanctions, and those caught violating must not be dealt with with leniency. How can we, with a whole dictatorial machine in hand, let ourselves be tied up and let these malefactors take advantage of the situation and turn the state property and efforts into their own enrichment, impacting severely and negatively on the health and life of the people? Then what should we think and what attitude should we adopt towards those responsible for management of the health sector?

SCIENTIFIC, TECHNICAL ADVANCES MUST BE QUICKLY APPLIED

Hanoi NHAN DAN in Vietnamese 24 Oct 81 pp 1, 4

/Editorial: "Rapidly Placing Scientific and Technical Advances into Production"/

/Text/ With new policies on science and technology, our party is affirming that science and technology in our country first of all and primarily must competently serve achievement of the overall line, the party's line of economic construction. Along with promoting scientific research, special importance must be given to the rapid and widespread application of scientific achievements and technical advancements to production and life.

In this sphere of activity, many sectors and local areas have made progress. In the agricultural sector alone, besides 15 topics in state-level key programs on scientific and technical progress, 11 technical advances that may be immediately applied to production on a nationwide scale have been defined. These are technical advances in plant species, animal breeds, intensive cultivation regulations and increasing productivity in farming and stock raising; processing animal manure and developing green manure; methods of synthesizing insecticides and pig and poultry vaccines; the production and use of mixed feeds; and the improvement of depleted soil. The establishments and perfection of a four-level rice variety system, aimed at overcoming crossfertilization, avoiding degeneration and well-developing the good points of new rice varieties, can increase yearly rice total output by 10 to 15 percent. The production of mixed feeds for raising hogs will result in a saving in feed of from 10 to 20 percent. The use of synthesis to control a number of hog diseases will reduce the number of hogs killed by disease annually by 10 to 20 percent, etc.

In the industrial application to production of improved 12-horsepower diesel engines, it is possible to increase by half again to double the time of use before major repairs are necessary. Applying the system of wattless power compensation to the electric power system of northern Vietnam will reduce losses of much electrical energy. In 1982 alone, it will be possible to save 10 million kilowatt hours. The use of kaolin clay in water to produce fire resistant brick for rotating clinker kilns has the capability to save hundreds of thousands of dollars. Applying the method of cold drawing and resistance welding types of round steel in production will save hundreds of tons of steel. Applying the cold alkaline technique to the production of paper and cardboard will save half of the soda used in the old method and increase efficiency in the recovery of paper pulp by from 45 to 65 percent. The production of cargo and passenger ships of steel-netted cement will reduce the required amount of iron and steel by 65 percent, etc.

Why in the past have many valuable scientific achievements and technical advancements not been rapidly and widely applied? There are many reasons but that of complacency is still foremost. Many have not yet truly and firmly grasped the line and mission of the party in the scientific and technical field and have not fully realized the key role of the scientific and technical revolution. The economic, scientific and technical management apparatus still carries an administrative nature. Cadre policies, appropriate investment and assurance of equipment and materials for scientific and technical work have not yet been perfected.

In order to answer the requirements of the revolution's new situation and mission, it is necessary to overcome the shortcomings above and rapidly apply scientific and technical advances to production.

The situation of scientific and technical activity is making new changes. The system of product contracts for laborers in agriculture and industry is creating favorable conditions for the introduction of scientific and technical advances to production. The Council of Ministers has promulgated a number of important documents such as invention statutes, a scientific and technical planning system, a system of economic contracts and scientific research and technical development, a decree on state and Ho Chi Minh awards for scientific and technical, cultural and art projects, etc. These systems and measures are aimed at gradually substantiating and systemizing the spirit and theme of the resolution of the Political Bureau on scientific and technical policy and promoting the rapid introduction of technical advancements to production as well as every scientific and technical research activity.

The results of basic inquiry and scientific and technical advances must have a strong and profound effect on every production, business and management activity and become an important factor in promoting economic development. Scientific and technical planning must become an organic component of economic, cultural and social development planning in all sectors and echelons. The separation between science, technology and economy must be ended. We must concentrate forces and means to achieve synchronized programs, in accordance with the major objectives of the state and of each sector, especially programs to support agricultural development, the production of consumer and export goods and to resolve the problems of energy, fuel, machinery, spare parts and transportation and communications. The establishment of financial systems and policies, reasonable prices and appropriate investment will assist in stimulating the rapid introduction of technical advances to production. Along with achieving the planned scientific and technical advancement norms, local areas and primary level production facilities in conjunction with scientific and technical research agencies can develop an initiative in signing economic contracts in research and applying scientific and technical advances.

Strengthening leadership, improving management and regularly giving concern to using and developing the abilities of the scientific and technical cadre ranks is the responsibility of all party committee and administrative echelons. Scientific and technical cadres must be more closely connected with production and life and make more meritorious contributions to the construction and protection of the socialist fatherland.

MILITARY AFFAIRS AND PUBLIC SECURITY

ARMYMEN HELP PEOPLE CATCH THIEVES

Hanoi QUAN DOI NHAN DAN in Vietnamese 13 Oct 81 p 2

[Article by Phuong Thao: "Nabbing Malefactors Along the Road"]

[Text] At 0800 am on 27 July 1981, while cooperative members were busy working in the fields for production purposes, two men named Tao and Binh took advantage of their absence to enter the house of Mr Sanh, director of the Gia Thuy Cooperative (Gia Lam District, Hanoi), pried into his wardrobe and took a radio set and other items. But their act was promptly detected and they ran away, using knives and pistols to resist the militiamen and local public security agents who were on their heels. Despite the warning shots by the public security and militia forces, Tao and Binh resisted stubbornly and recklessly, shooting and wounding a public security agent.

At that time, there were three combatants named Nguyen Ngoc Hoan, Pham Ngoc Dinh and Truong Quang Loc who were pushing an improved cart. On hearing the gunshots, Dinh told his comrades-in-arms:

--Do you hear gunshots?

They stopped their cart and looked at the road. On seeing a man with a frightened look flash past on a bicycle, Hoan knit his brows, looked at him suspiciously and told Dinh and Loc:

--Why did he pedal away so hurriedly toward the ricefields? We must arrest him.

Immediately after saying so, he shouted:

--Hey! That guy! Stop!

The bicycle continued to dash away.

--Let us encircle and nab him!, Hoan ordered. The three combatants darted out in three directions. The malefactor quickly abandoned his bicycle and crossed a small canal. The three combatants ran after him at a higher speed. At a loss, the malefactor stopped, pulled out his dagger and looked around for an escape. Pham Ngoc Dinh shouted at him:

--Down with your dagger and your life will be saved!

Taking advantage of the malefactor's inadvertence, combatants Hoan and Loc darted at him and locked his arms.

--Please do not arrest me, the robber implored breathlessly, adding: I had a scuffle with them. If you arrest me, they will beat me to death when they come here. If you set me free, I will give you as a keepsake my bicycle which I left behind on the bank of the canal.

--Shut up! Hoan told him sternly. --Why should you fear if you are not a malefactor.

At that moment, the pursuers arrived. The three combatants handed the malefactor over to the local public security agents and militiamen. All of them were angry but satisfied. A public security agent shook the combatants' hands and said merrily:

--So these malefactors have been caught. Thank you, comrades. They are very stubborn. They broke into the people's house to steal property. When detected, they resisted with pistols and daggers. One of them has been caught by the people. As for this one... Thank you, comrades!

Following an inquiry by the public security organ, both malefactors were forced to admit clearly that they were two inveterate thieves and that they were wanted for murder. They pleaded guilty before the law.

The deed of the three combatants of the 47th Company, Hong Linh Group (Hanoi Antiaircraft Defense Unit) has won praises from the public security organ and local people.

IMPROVEMENT OF EXPORT GOODS QUALITY URGED

Hanoi NGOAI THUONG in Vietnamese No 5, May 81 pp 32-36

[Article by T.D.: "Some Tasks That Must Be Carried Out to Improve the Quality of Exports"]

[Text] In order to rapidly increase the export index under our present economic conditions, a matter of important significance is the development of production to create many comodity goods. But whether those goods will be consumed or not depends to an important degree on their quality. If the quality of products is assured, the trust of the customers is maintained, the quantity of goods consumed steadily increases, and the economic effectiveness of production and commerce is increased and exerts a direct effect on increasing the export index. Therefore, in recent years in addition to promoting production our state has also continually paid attention to the quality of export goods. In Decree No 159/TTg, dated [day missing] July 1973, the Premier stated that "The Ministry of Foreign Trade must strengthen its inspection of exports and imports .... It must resolutely prevent the export of shipments of goods which do not meet the stipulated quality standards." After that, the Ministry of Foreign Trade promulgated Decision No 787/BNgT/XK, dated 21 October 1974, which clearly stipulated the responsibility of each component and echelon of the provincial and municipal foreign units with regard to assuring the quality of exports. Since then we have made many all-out efforts to contribute to continually improving the quality of exports, but there are still many tasks which we must do a better job of fulfilling if we are to meet the requirements of the new situation.

Reviewing the Situation of Export Goods Quality During the Past 5 years (1975-1979)

Recently exports have consisted principally of four principal groups of goods: agricultural, forestry, and marine products such as tea, coffee, beer, spirits, oil-bearing seeds, vegetables and fruit, etc.; such handicrafts and artistic goods as wool carpets, jute carpets, embroidery, rush, woven rattan and bamboo, etc.; such light industry goods as ready-made clothing, shoes and sandals, textiles, etc.; and such heavy industry goods as coal, cement, chromite, etc.

Our list of exports is rich and varied with regard to types and manifests the diversity of small-scale production. Export goods are produced by two sectors: state mines, state farms, state forests, and state enterprises produce more than 60 percent of the exports, while the rest is produced, processed, or collected for export by the agricultural cooperatives, handicraft cooperatives, and the people.

The basis for managing the quality of export goods is the articles regarding quality stipulated in foreign trade contracts, according to Vietnamese or sector standards. The quality of export goods produced, requisition-purchased, or processed in the localities is the responsibility of the examining offices and teams of the local foreign trade corporation. At the central level and the seaports, that is the responsibility of the export goods examining departments and sub-departments.

In general, during recent years the quality of heavy industry and light industry goods has changed little, has increasingly tended to stabilize, and to a certain degree quality has improved. For example, the ready-made clothing index has steadily increased: between 1975 and 1979 it increased 287.52 percent. At the same time, quality has also increased: in 1975, only 91.4 percent of the shipments met export standards and refunds amounted to about 3 percent (of the total number of shipments), but in 1979 the ratio of shipments meeting export standards increased to 98.63 percent, while complaints and demands for refunds decreased to less than 1 percent. Nearly 100 percent of the cement, tin, knitwear, and wooven wool shipments met export standards and there were no complaints regarding quality or demands for refunds. Such goods are truly stable with regard to quality. As for some products, such as badminton shuttlecocks, table tennis balls, shoes and sandals, recently their quality has improved: goods which do not meet export standards have amounted to between .5 and 2.1 percent, or an average of 1.73 percent. Although there have been some complaints from foreign countries, they have been insignificant and have amounted to less than .1 percent of the value of the shipments.

On the other hand, rubber products have consistently failed to meet quality standards and have continually been the subject of complaints, principally because of unstable quality: different types have been mixed in together and quality grades have not been appropriate to international stipulations and grades. In 1979 the quality of coal and rubber products declined rapidly. A high percentage of the coal was a mixture of different types, had a low calorie content, and had a high ratio of organic impurities. During the first 6 months of the year, complaints were received regarding all shipments. The reason for that situation was that coal mining and grading were not well organized. The management of quality, especially the control of the coal corporation's examining office, was not tight and strict. Although mistakes were discovered, certificates attesting that quality standards had been met were still issued.

With regard to rubber goods, nearly 40 percent of the products failed to meet quality norms. The rubber had a low melting point and its surface was rough. The quality of raw materials used to manufacture products varied not only from one shipment to another but also within the same shipment. Recently, foreign customers have criticized the quality, and have sometimes made complaints.

In the third category -- small industry and handicraft goods -- embroidery, wool carpets, jute carpets, and rush are products which have attained the highest quality standards. Their quality is relatively stable and nearly 100 percent of the shipments have met export standards. Especially, since they began to be developed the quality of embroidery goods and wool carpets has been maintained, even though the import index has doubled. An important reason is that the raw materials used to produce those goods have met the production requirements. Furthermore, the producers have been well trained and have relatively solid skills, and production management is good. The fact that the Artistic Handicrafts Export-Import Corporation paid attention to providing guidance, annually conducted skill examinations, selected skilled workers, etc., had a good effect on assuring quality. The quality of jute and rush rugs clearly improved. In the 1975-1976 period those two products often had to be remade, and on the average, less than 70 percent met quality standards. Indeed, in June 1976, only 58.2 percent of the jute rug shipments met export standards, there wide fluctuations of quality with regard to sizes, color, design, etc. But since 1977 and 1978 there has been clear progress, and in 1979 the average quality level rose to 96.4 percent. During the same period, more than 99 percent of the rush products met export standards. Complaints by foreign countries were less than one-forth of what they had been in the past, with a very low value level. In addition to the efforts of the production bases to improve product quality, there was the very important role and positive contribution of the professional cadres of the Rush Bureau and Jute Bureau of the Artistic Handicrafts Export-Import Corporation. Nearly all of the product cadres of those two bureaus have mastered commercial practices and fully understand production, technology, and product quality, but a matter that must be stressed is their strong sense of responsibility and resolute attitude toward assuring quality, cooperating closely with the quality management sectors, and participating in production and gradually getting it on the right track, both assuring rapid quantitative development and assuring that quality is stabilized and improved.

At the same time, the quality of lacquerware declined rapidly and became increasingly unstable. Such deficiencies as cracks, shrinkage, incorrect designs, and dull lacquer persisted for a long period of time and could not be corrected. Such products were among those with the lowest quality and the least stability. In 1979 complaints and demands for refunds increased to 25 percent of the value of delivered goods (in 1976 the total was 7.8 percent and in 1977 it was 12.8 percent). That was due in part to difficulties in the supplying of raw materials, especially wood and lacquer, which often did not meet the technical requirements of production. Another important reason was that the management and production guidance of the specialized and professional stations of the General Corporation were still weak, and in some places were still too lax, expecially with regard to the management of models, designs, materials, and raw materials. Due to the arbitrary, impetuous production it was impossible to manage quality, and product quality steadily declined.

A similar development occurred with regard to woven rattan and bamboo products. A widespread situation in the cooperatives producing woven rattan and bamboo items is "approximate" production,the adulteration of raw materials, and the skipping of production phases. Practically none of the production bases gave the raw materials anti-mildew treatments before forming then into products. Few of them paid attention to drying and sterilizing the raw materials. That is an extremely important process in order to assure the quality of woven rattan and bamboo products, especially under the conditions of our country's hot, humid climate. Therefore, a high ratio of the exported rattan and bamboo products must be remade. In 1979, that ratio was more than 20 percent, principally because of mildew. In some shipments, all of the crates that were inspected were mildewed. Such deficiencies as carless weaving, protuding splints, buckled frames and rims, loose handles, uneven colors, etc., result from careless manufacturing and production that pursues quantity and does not pay attention to quality. Quality control at the local warehouses, stations, and foreign trade corporations and the Hai Phong and Ho Chi Minh City branches of the General Corporations is still not tight. The situation of the production bases calling themselves local foreign trade organizations and directly delivering goods is quite widespread, which creates chaos, results in the export of poor-quality goods, and creates difficulties and complications for the management of quality.

Finally, there is the category of agricultural, forestry, and marine products, which have undergone many complicated changes with regard to quality, and the quality of frozen marine products has steadily declined. Products are often spoiled, rancid, and affected with anchylosis, and few shipments meet the sanitation norms. In 1979, there were complaints about nearly all of the shipments. The same was true with regard to some other products, such as salted mackerel, smoked horse mackerel, etc. The industrial sanitation conditions are deficient and the microorganism levels are high. There are even shipments which are spoiled and are infected by bettle larvae. The poor quality has resulted in the danger of losing the market. The principal reasons are that the organization of fishing, storage, and grading is not yet good and that industrial sanitation is not closely controlled and monitored. A source of worry is that the above situation has existed for some time and has steadily worsened, but the responsible organs of the managing sector have not taken positive steps to overcome and rectify that situation.

The quality of frozen vegetables and fruit is better: more than 90 percent of the shipments have met export standards, and recently that ratio has increased to 96 percent. The most noteworthy progress has been in the freezing techniques of the enterprises, which are better than in the past. On the other hand, the quality of fresh vegetables and fruit is lower than in the past. For example, half of the shipments of the 1979 Nghe Tinh orange crop and the fresh pineapples exported in the first part of 1980 in Ho Chi Minh City did not meet export standards, and complaints were made about 50 percent of the shipments because of spoilage. The principal reason was that our grading and storage were still deficient. In general, the techniques of transporting and storing fresh vegetables and fruit are still deficient, so their quality is low.

Spirits, beer, and tea are industrial goods but their quality is low, their flavor is lacking; spirits are "bleached" and pieces of glass get into the beer because the bottles are brittle and shatter inside when capped. The glass bottles are not reliable, so after a while the alcohol eats into the glass, which results in needle-shaped glass shards getting into the spirits. Another noteworthy reason is that the raw materials are of poor quality. Due to drought last year there are few buds, and many leaves, in machine-processed tea, and its flavor is deficient.
Furthermore, when the tea is shipped from the factory its moisture content is already 8 percent, and after a period of time in storage it increases to 8.8 to 9 percent, or even to 10 percent. High moisture results in a lack of flavor, mildew, etc., while the maximum allowable moisture content is 7.5 percent. Recently there have been more complaints from customers regarding that product than in the past.

The ratio of canned goods, especially canned vegetables and fruit, that leak is high, principally because the stainless steel does not meet production requirements. Therefore, the ratio of leaking canned goods has steadily increased: on the average, it is about 10 percent, and in some cases it is 20 to 25 percent, which results in a short shelf life and in the rapid decline of quality. That situation has existed for the past several years and still has not been overcome.

The quality of some other products, such as grain, oil-bearing seeds, vegetable oil, spices, etc., although seldom fluctuating is not yet high. For example, the quality of shelled peanuts and unshelled peanuts is only about 80 percent of the norm. The ratio of broken peanuts is usually 1.5 to 2 times higher than the norm, and usually 3 to 5 percent of the peanuts are affected by mold, especially "inside" mildew, a ratio that sometimes increases to more than 10 percent, or even 15 percent, although the stipulated standards allow no mildew. Because requisition-purchasing is carried out in the localities with the slogan "requisition-purchase everything," there is no organization of grading and processing, so underdeveloped, shrunken, flat, and moldy peanuts usually account for a ratio higher than the stipulated standard. The quality of unshelled peanuts is also not very stable, there is a high moisture content, and the oil is affected by increased moisture and acidity.

Some Basic Tasks That Must Be Carried Out to Imporve the Quality of Exports

When we review the quality of exports during the past several years we can learn many useful things regarding the results that have been attained and the reasons for the successes and deficiencies, as well as the experiences of production, commerce, and quality management. We can thereby isolate the tasks that must be carried out to further improve the quality of exports during the coming period.

First, positive, complete, and resolute steps must be taken to assure the quality of export goods, beginning with the production phase. The actualities of the production of export goods during the past 5 years show that the quality of nearly three-fourths of the products is unstable, and the quality of one-third of those products is deficient. Except for lacquerware and artistic goods, the goods in that category are produced by state enterprises and the quality of such exports is not assured beginning with the production phase because the elements of production are not fully and uniformly assured and the producers often are not concermed with the quality of exports. Furthermore, there are not clear stipulations regarding responsibilities or the quality standards of each type of product. To overcome that situation, it is necessary to:

-- Once the production basis drafted plans to produce export goods, assure the supplying of all necessary raw materials, materials, spare parts, etc., to assure that production is technically correct. The raw materials and materials that are supplied must be of good quality.

-- In addition to ideological education and spiritual motivation, it is necessary to draft specific regulations regarding tthe quality of each type of export goods, while clearly determining the material responsibilities of who directly produce the export goods. There must be material rewards for workers and bases producing high-quality export goods. At the same time, there must be suitable punishment for bases and workers producing poor-quality export goods because they have no sense of responsibility and work carelessly. If foreign customers complain and demand a refund because of poor quality after goods are delivered abroad, and the reason for the poor quality is the method of production, strict disciplinary steps must be taken.

-- It is necessary to rectify, supplement, and create quality standards for export goods. Of course, export goods must be of higher quality than domestically consumed goods. Each export good must be labled with a symbol, category quality grade, quality control stamp, etc. At the same time, it is necessary to draft procedures for approving the list of products and the units and production bases authorized to register to produce export goods. If that is to be achieved, production bases desiring to register must have production plans and the factors of production must be assured so that their products can meet export standards.

Second, the export-import general corporations and corporations, as the representatives of producers in our country in signing contracts with foreign consumers, must firmly grasp the production capabilities and technical levels in our country, and must solicit the opinions of the producers and the management and guidance organs about product quality. When necessary, they may serve as specialized advisers in order to conclude truly good foreign trade contracts. Furthermore, after they sign contracts they must report them to and guide the production bases. We must bring an end to the situation of signing foreign trade contracts the quality stipulations are vague and general, such as the stipulations that "the quality specifications are the same as during past years," "high-quality goods," etc., or of stipulating quality standards that are fare beyond our production capabilities and technical level. At the same time, it is necessary to fully inform all professional product cadres of the general corporations, corporations, and stations so that they can understand the quality norms in the contracts and avoid misunderstanding which leads to the production, purchasing, and shipping and receiving of goods the quality of which is not in correct accordance with the contract.

Another noteworthy factor that must receive our prompt attention is packaging. In general, the packaging of our exports is still too ugly and does not meet the durability and aesthetic requirements. When moved, the nails of crates containing bamboo blinds often come out at the ends and the lids become loose. During the last 6 months of 1979, we were required to sign papers guaranteeing to the ship captains the packaging of 100 percent of the shipments loaded aboard ships at the port of Hai Phong. More than 30 percent of the textile shipments delivered during the last part of the year had to be remade, and their packaging replaced, before being loaded aboard ships. Attention has not been paid to transporting and protecting goods sent from localities far from the ports, or to train, boat, and truck facilities. There is a lack of canvas covers to protect goods from rain and sun and there is a lack of protective packing materials. The floors of railroad cars and trucks are often very dirty and are not cleaned before goods are loaded. A considerable amount of goods are ruined, damaged, or deteriorate in that phase. There must be regulations and close control of packaging, transportation, and storage. Only thereby can we limit losses and the deterioration of the quality of export goods.

Third, strengthening the quality control of export goods is a very important aspect of quality management. Control at the base level is an extremely important aspect. It is preventive in nature and allows the attainment of a high degree of accuracy and of the highest economic effectiveness. However, in the transportation and storage processes, when waiting to load goods aboard ships, etc., the quality of shipments is easily affected. Furthermore, under the actual conditions of our country the basic examining organizations (KCS), both within and without the sector, are generally still weak with regard to professional matters and lack technical equipment. Especially, to a certain degree they are still "coerced" by the bases when dealing with shipments leaving factories or warehouses which do not meet quality standards. Therefore, the inspection of export goods at the final ports by the export goods quality inspection organs is essential.

However, in that phase there should be clear, specific stipulations as to whether the products of a certain base, or a certain product, should be controlled principally at the base level or at the port. We must avoid the situation of a shipment of goods having to be inspected many times, while some shipments are not inspected at any level. The examination Department should also have a list of key goods it manages so that it can concentrate on doing a truly good job of inspecting and managing them; and avoid "blanket" management, directly inspecting 100 percent of all types of goods. In the actual situation at present, it is not capable of doing so properly. That deficiency in management has resulted in an increase in refunds and complaints regarding poor-quality goods during recent years.

At the same time, it is necessary to perfect the base-level inspection network so that it can be truly strong. We must promote base-level examinations and the inspection of goods at the base level. And along with the quality control of export shipments, we must unify the control methods and processes, and the method of handling shipments of goods undergoing inspection, etc., thus creating unity in guiding and managing the quality of exports.

Whether the quality of export goods will be maintained and improved or not depends on many factors, including the producers, the commercial personnel, and the inspectors. Quality management plays an wxtremely important role. The above-mentioned experiences, which have been gained from actual work during recent years, are unique to the spheres of production, commerce, and control but are also interwoven and organically related and present considerable problems. There must be specialized joint conferences to discuss problems, exchange opinions, attain unity and coordination, and create a combined strength, common objectives, unity, and joint effort in order to maintain and further improve the quality of our export goods during the coming period.

PARTY ACTIVITIES AND GOVERNMENT

ELECTRIC POWER SERVICE URGED TO CARRY OUT IMPROVEMENT

Hanoi HANOI MOI in Vietnamese 30 Sep 81 p 3

[Article by P. V. (Reporter): "Let Us Hope the Electric Power Service Would Carry Them out Urgently and Fully"]

[Text] In the last 8 months the supply of electric power for production and everyday life in the municipality has not been stable and in many places and aspects there has been a tendency to get worse everyday. We know very well the objective difficulties, such as shortage of sources of power, means of transportation and materials being difficult to get, the transmission network being too old and excessive overload. But subjectively speaking, the Electric Power Service has also shown many shortcomings, particularly in regard to organization of management. Thefts of materials and properties, including materials being used on the transmission network and being stored in warehouses, have continued to take place.

Let us give some examples: at Kim Lien station meters (voltmeters and ammeters) that had just been installed were stolen. We can say many thefts occurred quite easily: 200 power consumption meters were stolen in collective housing buildings many stories high; 100 meters of cable were stolen in Bach Mai; light bulbs and wires in the streets were also stolen. There were cases in which the people who stole light bulbs were right behind the people who replaced the bulbs.

What deserves complaining is that a number of employees of the service were directly involved: Nguyen Thi Hoa, assistant warehouse keeper of the Materials Bureau, was caught red-handed stealing four foreign-made wrenches. A few days earlier, 300 light bulbs were stolen in the same warehouse; Nguyen Xuan Kinh of the diesel shop allowed an unaccountable loss of 625 kilograms of oil; Duong Quoc Long, a security guard, stole 16 kilograms of aluminum wire.

Quite a large number of workers of the service stole electricity, particularly for use in illegal production. Nguyen Quoc Hung, a worker at Ba Dinh power substation, many times deliberately turned on and off and stole electricity to make firecracker powder. A number of workers like Pho Quoc Dinh of the Hoan Kiem power substation, Phan Quoc Chi of the major maintenance unit and Huong of the street light unit deliberately made transmission line connections and brought electricity from the street into their homes.

About the phenomenon of looking for illegal earnings and accepting bribes, although not very many cases have been revealed, it deserves a lot of attention: Nguyen Huu Toan, former head of the Me Linh power substation, admitted he had received 9,500 dong of bribes from Thanh Xuan Cooperative. Both the theft of electricity for illegal production at 67 Nguyen Trai Street and the Thanh Xuan case involved some cadres and workers of the Electric Power Service. Then there were the cases of To Nhu Nau, a team leader at the Ba Dinh power substation, making illegal electrical repairs in An Duong collective zone and Duong Minh Duoc of the Hoan Kiem power substation having repeatedly suggested he would accept money.

While there still existed many difficulties in the supply of electric power, the service still did not have any effective measures to reduce complaints against unfair distribution of power (between collective zones and housing projects on the one hand and stores and counters and handicraft production on the other).

The Electric Power Service has made a survey of the key locations and found that the weakest link was still the four urban power substations, particularly the Ba Dinh substation.

From the Cua Nam Subward pilot project the work has been extended to other subwards. Through it the service has found that it must rely on the subward administration to properly carry out distribution and inspection of use of electricity. However, there are many matters in connection with organization and working method that require continued thinking and execution as it must have not only breadth but also depth. This has not been achieved so far. As in the fight against the negative signs there must be a combination of building and fighting, both aspects remain weak, mostly building (building a managerial order and man). As for a combination of internal and outside struggle, both remain weak, particularly the struggle within the ranks of cadres and workers of the service.

We have found that many negative phenomena continue to take place and repeat themselves many times and that there really are not very many measures to take to stop them.

The major reasons, which limit the correct results, have been the lack of positive planning and firmness in leadership and the fact that many cadres and workers were still rightist and lacked responsible and exemplary behavior.

We mainly discussed above the shortcomings within the service. In fact, outside of the service there have been innumerable cases of illegal and irrational use of electricity and thefts of electricity that had been existing for years and still remained unresolved, and even worse did not draw the attention of either the service or the responsible organs, which sometimes proved themselves powerless.

At its meeting last August to have a preliminary review of the fight against the negative signs, the Electric Power Service discussed the work to be done between now and the end of the year, with efforts to be concentrated on the practical work like continuing inspection and firmly handling the pending cases; prosecuting a number of typical violations; distributing the managerial task among units; reorganizing its own ranks, concentrating especially on consolidating the four urban power substations; coordinating with the subward people's committees in drafting the bylaws to include the articles of prohibition aimed at the cadres and workers of the service in their contact with the people and customers; coordinating with the trade-union federation and the municipal chapter of the Ho Chi Minh Communist Youth Union to strengthen inspection of distribution and use of electricity; firmly enforcing the newly-promulgated regulation on punishment, etc.

We think that all measures are good and necessary but the important thing is to carry them out. We hope that the Electric Power Service will urgently, carefully and firmly carry out the measures that have been discussed.

ISSUANCE OF PARTY MEMBERSHIP CARDS IN HANOI

Hanoi NHAN DAN in Vietnamese 14 Oct 81 p 3

[Article by Vu Giang: "Hanoi Concentrates on Completing Party Membership Cards Issuance"]

[Text] Organizing party card issuance at 268 remaining basic organizations while continuing to solve all the backlog of nearly 8,000 instances from previous waves, is a fairly heavy task being carried out by party primary organizations in Hanoi with a view to fundamentally completing party card issuance by year's end. Such task calls for high determination and strict guidance of all party committee echelons, from city, precinct, and district down to the primary levels. From a number of precincts such as Ba Dinh, Hoan Kiem and Hai Ba Trung, and districts such as Gia Lam, Hoai Duc, etc, we see that committee echelons have clearly shown a sense of urgency. The municipal committee has guided primary organizations to grasp the contents of Circular 124 of the Party Central Committee Secretariat, to correctly apply standards and to oppose the tendency to set lower standards and espouse rightist views when it comes to looking into party members' behavior. Expelling unworthy elements from the party has been carried out more resolutely. A number of rural party organizations have expelled from 5 to 6 percent of party members. Of the backlog from previous waves, more than 9 percent of party members have been expelled.

Consolidating party primary organizations to make them eligible for card issuance still is a leading condition. The municipal committee's spirit of determined guidance is that all primary organizations conducting card issuance must really be consolidated and that procrastination is no longer tolerated. The municipal committee has also urged precinct and district committees to concentrate on helping very weak primary organizations and strengthening control.

A widespread cause for lingering weakness at many primary organizations lies above all, in the loss of unity, affecting committee echelons. Some units were affected very seriously by this shortcoming. The first requirement is to reinforce core cadres and elect new party committees. There were instances where party organization consolidation was only possible after transfer of cadres. A characteristic of the Hanoi party organization's leadership relationships, especially with its many urban primary units, is that while party primary organizations are managed by precinct and municipal [party] committees, in production and technical work they are directed by central [government] branches. Lack of coordination between party cadres affairs committees at ministries and general departments, and especially lack of unanimity over how to scrutinize and rate cadres, often cause difficulties to the task of reinforcing core cadres and consolidating basic organizations. This situation is now being overcome. The Hoan Kiem precinct committee, with the coordination of party cadres affairs committees of the Ministry of Communications and Transportation and the Ministry of Public Health, has finished consolidating an enterprise party organization and a hospital party organization which had been affected by lingering weakness. All key cadres at these two places had to be replaced. Party organizations conducted self-criticism and criticism and disciplined party members for committing the grave flaw of forming cliques and fomenting internal squabbles. The Ba Dinh precinct committee coordinated with the Ministry of Light Industry party cadres affairs committee to guide the Thuy Khue leather factory party organization to consolidate itself. The ministry has dismissed from office the factory director and beefed up the board of directors with young cadres. This party organization has taken steps to elect a new party committee. Using the same approach, many other primary organizations in Ba Dinh Precinct such as the beer factory, the commercial bureau, Transportation Enterprise V73 of the Ministry of Food Industry, the Medical Information Institute party chapter, etc, are well on their way to consolidating themselves.

Many instances of violating financial management principles and procedures, of embezzling socialist property and of harassing the masses have been investigated and prosecuted. However, many very complex cases and matters remain unsolved because the fighting spirit of a number of basic organizations is not yet strong and management has been given a free rein for too long. Despite clear manifestations of blemished quality, a number of party cadres and members still enjoy protection from many sides. To educate party members and consolidate party organization, control and discipline enforcement must be more resolute and more timely.

The failure to solve the card eligibility of many party members put off by previous card issuing campaigns comes, partly from a willingness to tolerate cronies and a reluctance to expel unworthy elements from the party, and also from using incorrect yardsticks to assess party member conduct. The review of cases and matters brought to light by party chapters and the people lacks urgency and thoroughness. Education and training are insufficient.

To raise party member quality, a number of party primary organizations have taken active measures, such as improving party activities, training party members by assigning concrete tasks to them, and strengthening control and discipline maintenance right at the primary level. By means of guidance in product contracting to laborers, rural party organizations can grade party member deportment on the basis of how they carry out new management guidelines and measures, how they fulfill obligations and how they attend to consolidating production relationships. Ward party organizations must strengthen the education of party members about the need to strictly follow policies concerning market management, fight against speculation and smuggling, and maintenance of order and security. Many party primary organizations, such as the one at the Postal Equipment factory, have held fast to the self-criticism and criticism pattern within the party and to the use of non-member comments to assess party member conduct every six months. The Ba Dinh Precinct party organization had 673 cardless members left off from 5 previous card-issuing waves. By turns, 600 members have been considered for card eligibility. The party committee has decided that from now to the end of the year, those party members set aside for review and education but not showing clear progress will be removed from the party roster.

MUCH REMAINS TO BE DONE IN MARKET MANAGEMENT

Hanoi HANOI MOI in Vietnamese 26 Sep 81 p 3

[Consumer's Notebook column by Nguoi Tieu Dung (Consumer): "It's Far From All Right"]

[Text] After days of urgent activities, market management seems to have become an orderly job. Business registration is still being checked; prices are still posted, sales are to be based on posted prices and violaters are still fined; the fight against inadequate collection continues, with sometimes a big case of speculation, smuggling, etc. being made public. Some people have quickly thought things were getting better.

However, like everything else in life, things are not that simple! Those who do illegitimate business never sit still but rather try to always seek some ways to deal with any situation, to resort to shrewd manipulation and to make more money. The more money they make, the more excessively they spend it. If they want to spend excessively, they must resort to every trick and scheme to get hold of the socialist properties and to take state-owned goods from their sources.

What is plain for everybody to see is the fact that the booths and counters run by private business people become more numerous and the number of people who deal in the goods under state management becomes larger everyday. Those who deal in smuggled goods use the means of transportation of the state or Honda's, which are recklessly driven at high speed on urban, suburban and provincial roads.

In this situation, if market management is carried out in accordance with "normal routine" as before, it will not be able to respond to the need, nor to create vigorous and decisive changes.

While state stores do not have cement, even a kilogram of it for a floor-repairing job, to sell to the people, why do many people have tons of cement to build two-story houses with reinforced concrete? While patients cannot have their prescriptions filled at drugstores, why are there in the market more people selling western medicines and many private business people transporting large quantities of medicines to the south? And so on, and so forth. And so the activities in connection with market management must vigorously focus on fighting speculation and smuggling, and from such cases uncovering any corruption, illegal deals and stealing of state goods.

Only then we will contribute to protecting the socialist properties, managing well sources of goods and stabilizing the market and prices. And consumers will benefit from all this.

ECONOMIC PLANNING, TRADE AND FINANCE

EDITORIAL DEPLORES DEALING IN ANYTHING JUST FOR PROFIT

Hanoi HANOI MOI in Vietnamese 30 Sep 81 pp 1, 4

[Editorial: "Expanding Business Does not Mean Dealing in Any Goods"]

[Text] Implementing the resolutions and directives of the VCP Central Committee and the municipality, in recent months many state-operated industrial, small industrial and handicraft, agricultural, commercial, foreign trade, communications and transportation, services and other installations were expanding their business in the right direction, making active contributions to increasing the social product and properly serving production and the standard of living. As a result, there has been a real increase of the quantities of new, restored and improved goods, with some necessities being satisfied beyond the share of supplied provided by the state and with many forms of services for consumers being better.

But beside such correct activities there appeared deviations from the concept, view and direction of business which was done to pursue earning of profit rather than to step up production to have more goods for society.

Under the pretext of "part 3 plan," a number of corporations and enterprises were dealing in the goods that had nothing to do with their sector just to earn some profit and using even the main-product raw materials to make "exchange" goods while workers lacked raw materials to keep up with the production plan. Some corporations specialized in management in the textile and yarn sector did illegal business as they dealt in thousands of meters of cotton materials taken from the state just to make some profit. Some machine works, even district organs and the Red Cross, were making popsicles as a way of doing business. A number of corporations and stores unselectively dealt in a few goods to artificially boost their turnovers while the total quantities of goods did not increase. Some district-level transportation units and marketing cooperatives were dealing in even wheat flour and precious medicinal materials, which are the lines of goods being under unified state management, and shipping them to the south to sell for large profits. The consequences of this wrong way of doing business are: the quantities of products and goods do not increase; prices are raised higher, accompanied by false shortages; society does not gain anything while consumers are to lose, with only a handful of people reaping profits. More damaging is the fact that this illegal way of doing business has degraded a number of cadres, workers, civil servants and cooperative members.

To expand business is not to deal in any goods just to make some profit and to boost turnovers in an artificial manner but rather to strive to develop production, to step up circulation and to create favorable conditions for commerce to improve distribution and to properly serve the life of working people, reproduction and expanded reproduction, thus raising the working capacity for society.

In this spirit all sectors -- industry, agriculture, commerce, communications and transportation, culture, services, etc. -- can expand the socialist business to develop production, to make more goods, to give society more products and to increase accumulation, with the working people increasing their income in a legitimate manner.

The forms and measures to do business are numerous and we must choose the right and rational ones. As for the secondary goods, we must be even more careful and avoid any unclear situation that may arise between arguments about their production within or without the plan and any conflict among units in a sector. Those who are assigned the task of doing business must thoroughly understand the policy goal, stress their sense of responsibility and avoid seeking profit in the name of units or collectives for individuals or groups of individuals. Managerial work must be consolidated and strengthened and stay close to the business task so as to serve in time and at the same time to avoid such negative phenomena as collusion, secret deal, waste and corruption.

To expand the socialist business is an urgent need that requires a lot of effort, creativity and a good sense of responsibility. But if the sectors and production installations that are capable of achieving such expansion do want to actively expand their business and to do business in the right direction, they will actively contribute to overcoming the common difficulties, making production develop, creating favorable conditions for distribution and circulation and making new progress for the economy.

EDITORIAL STRESSES IMPORTANCE OF WINTER-SPRING RICE CROP

Hanoi NHAN DAN in Vietnamese 12 Oct 81 pp 1, 4

[Editorial: "Harvest the Best Winter-Spring Crop"]

[Text] All localities are preparing for the winter-spring season which will mark the beginning of the 1982 agricultural production plan. The result of the winter-spring season will have a decisive effect on the fulfillment of the yearly agricultural plan because it is a high-yielding season with a rice productivity higher than that in the summer-fall and 10th-month ones. Favorable natural conditions and scientific-technical progress have opened up great possibilities for a strong development of the winter-spring crop. During the winter-spring season, weather conditions are relatively stable, with no occurrence of storms, typhoons and heavy rains; moreover, the atmospheric temperature and solar radiation which are low in winter will gradually rise at the start of the warm spring. Expanding the spring rice area in North Vietnam and growing an additional winter-spring rice crop in South Vietnam by using high-yielding and leafhopper-resistant short-term rice varieties is a new and highly significant feature. The composition of winter-spring rice varieties has been determined rationally and includes rice strains suitable for each region and capable of meeting the requirements of intensive cultivation, multicropping and crop diversification.

However, the winter-spring season is faced with some specific difficulties caused mostly by abnormal wheather conditions such as drought, cold spells or unexpected warm periods which are detrimental to crops. In particular, if the Nam Bo provinces can solve the irrigation problem when the water level of the Mekong River is low and if they can take measures to limit soil acidity and salinity, it will be possible to extend the cultivation of the winter-spring crop to millions of hectares as compared with the currently cultivated area of only 570,000 hectares.

The norms set for grain production in the 1981-1982 winter-spring season are higher than those in the 1980-1981 winter-spring season. Specifically, it is necessary to increase the area by about 5 percent, productivity by more than 3 percent and the total output by nearly 9 percent even though there will be no increase in the amount of technical supplies some of which may even be subjected to a cutback.

Experiences in the recent winter-spring and 10th-month seasons have demonstrated that, despite a shortage of technical supplies and regardless of frequent natural calamities, the various localities and production installations were generally able to obtain success in production by bringing the revolutionary offensive spirit into play, by overcoming all difficulties and by fully using all the actual possibilities and latent potentials in land, labor and available material-technical facilities. At the same time, they improved management and leadership, applied technical innovations and developed the effectiveness of the new policy aimed at stimulating production. The newly emerging factors in the agricultural production labor movement are contributing to a vigorous and continuous advance of agriculture.

The basic guideline to be followed in all farming tasks is to carry out intensive and specialized cultivation and to expand the cultivable area by increasing the number of yearly crops and by opening and breaking new lands. All localities and production installations need to reconsider their winter-spring production projects and plans and to rationally adjust, supplement and arrange production areas and crop allocations in order to achieve the highest economic effectiveness.

According to the state plan, beginning with this winter-spring season, it is necessary to start the extensive building of a "higher output" rice area of 1 million cultivated hectares and to stabilize production under all weather conditions. The duty of localities whose lands fall within the "higher output" rice area is to build fields according to standards and to adequately prepare the essential material-technical conditions.

Since drought usually occurs in the winter-spring season, water conservancy will continue to be the most important measure having a direct effect on the fulfillment of the arable area, the observance of the sowing and transplanting schedule and the application of the intensive cultivation technique. It has been forecast that the water level of all lakes, dams, rivers and streams in general will be lower than last year. The water level of the Mekong, Red and Thai Binh Rivers is lowering. The various localities must urgently try to preserve water in fields, lakes and ponds and must use it economically.

It is necessary to determine a rational ratio between dry and wet plowing by making calculations to achieve a proportion between water sources and labor and draft power conditions. It is advisable to carry out wet plowing on about one-third of the sowing and transplanting area in order to be able to grow azolla, to pick it up and compost it for use as a fertilizer, and to subsequently float it on the spring rice fields after the transplanting period.

The use of fertilizers is an urgent requirement for expanding the cultivable area and intensively cultivating high-yielding rice varieties which need a great deal of nutrients. If chemical nitrate fertilizer is insufficient, it can be compensated by the application of organic fertilizers, mainly by stable manure and azolla during the winter-spring season. The sources of fertilizer must be used rationally and managed strictly.

The task concerning seeds and seedlings has frequently become difficult due to abnormal changes in the wather conditions. If this problem is not solved satisfactorily, it will be impossible to completely cultivate the slated area or to carry out sowing and transplanting on schedule with the consequence that the rice corp's quality and productivity will be low. Plans must be drawn up to cope with unfavorable circumstances in order to secure enough good-quality seed paddy and seedlings to fully cultivate the slated area according to technical regulations and during the most favorable period. If sowing and transplanting are on schedule, the crop will grow easily with little risk of being damaged by harmful insects and will have a high productivity. In the recent winter-spring season, sowing and transplanting were carried out on schedule on as much as 94 percent of the slated area. In the coming winter-spring season, efforts must be made to attain and even surpass this norm to provide more safety for the crop.

Beginning with the coming [winter-spring] season, encouragement will be given to broaden on a nationwide scale the implementation of the system of product contract with laborers in the agricultural field. It is necessary for the Nam Bo provinces to try and step up the experimental implementation of this implementation of this contract system and to steadily extend it to production collectives and agricultural cooperatives throughout their region.

The new state policies aimed at adjusting and raising the buying prices of agricultural products and improving the method of distributing technical supplies will--together with other production incentive policies--contribute to vigorously promoting production in the coming winter-spring season.

ACUTE SEEDLING SHORTAGES FOR WINTER-SPRING CROP DISCUSSED

Hanoi NHAN DAN in Vietnamese 19 Oct 81 p 1, 4

[Editorial: "Produce Good Seedlings in Sufficient Quantities for Winter-Spring Crop"]

[Text] Plant strain are primary technological supplies in cultivation as well as significant technological factors that determine the ability of intensive farming to increase productivity and ensure full planting of areas.

Dependable seeds develop into healthy plants and acquire many capabilities of receiving and promoting favorable conditions from without; at the same time, they give crops enough strength to resist pests and inclement weather.

Undependable seeds cause just the oppositie effect.

As the saying goes, "good seedlings make good rice." Formerly, strains selection was carried out passively, on the basis of natural mutations or through the process of self-improvement; that is why the number of new varieties was very limited.

In recent years, rice varieties selection has achieved tangible progress. Applying scientific and technological progress to genetic strains selection, organs in charge of production research and guidance actively created many new rice varieties in response to evergrowing production requirements. Old rice varieties contributed to increasing yield by about 4 percent; now with new varieties crop yield has gone up by 20 to 30 percent. New rice varieties are clearly superior to old ones with higher yield and shorter growth time, opening up vast possibilities for planting more crops per year, spreading crops evenly throughout the year, opening new lands and expanding cultivated areas.

New varieties account for more than 600,000 hectares of spring rice and more than 300,000 hectares of winter rice in the north, and have added more than 1 million hectares to winter-spring and summer-autumn rice crops in the south, with a yield obviously higher than that of the 10th-month rice crop. Other noticeable achievements include discovering rice varieties capable of resisting dangerous pests, selecting and hybridizing those tolerating acid-salty, waterlogged, and drought-parched soil.

Besides accomplishments in selection and cross breeding of new varieties, there still are many shortcomings in maintaining and promoting advantages of new strains, giving rise to sizable wastes in seed paddy, and to a decline in new strains' valuable characteristics. Varieties playing a key role in production show signs of degradation and quality deterioration, causing reductions in yield--to only two-thirds of the initial crop--unnecessary multilayered rice heading, weak germinating strength leading to wasteful expenditures on seeds, and debilitating resistance to pests. Since large quantities of undependable varieties are unable to germinate properly, seedlings are in short supply, forcing farmers to give up full planting on planned areas, or to carry out full planting but with thin transplantation, or to transplant behind the schedule, etc. It has been calculated that losses in seed paddy nationwide owing to poor quality run to 800,000 to 900,000 tons each year.

The technique of nursing, storing and using seed paddy is not strictly followed. There are localities and production installations arbitrarily using varieties coming from other places, without epidemiologic control and without import permit from responsible organs, thus allowing pest germs to spread and upsetting the allocation of rice varieties previously planned for each zone.

The urgent task of solving the grain problem calls for a speedy increase in rice productivity and volume of production. Hence, seed production must undergo a very strong and evenly spread change in order to meet the requirements of providing dependable strains in sufficient quantities, guaranteeing area wide sowing-transplanting and in keeping with schedules and techniques.

Before sowing, localities and production installations should inspect their entire existing stocks of seed paddy as well as seedling-making material and technical installations. Rice varieties should fit in with production guidelines and crop cultivation patterns. Species of paddy in short supply should be replenished with identical ones--not arbitrarily with other strains. Substitutions affecting planned allocations of varieties must be authorized by superior echelons empowered to decide. It is necessary to select seed paddy satisfying all required standards--good paddy, high germinating strength, processing as well as water soaking, seed covering and sowing in line with technique.

A 4-level national system of rice varieties should be speedily built so as to gradually mold seed production into a scientific pattern. In the future, production installations should use only varieties provided by superior echelons within a direct variety supply framework aimed at producing strains in great quantities for large-scale sowing and transplanting. Localities and production installations must produce needed varieties on the spot and in sufficient quantities. They must not depend on superior echelons and must avoid reliance on shipments of seed paddy and budding seedlings from other places.

Applying product contracting to seed production is necessary for appropriately encouraging seed producers in cooperatives and production collectives. Places still unable to organize seed units can seek help from good production units in making seeds for cooperatives. It is necessary to encourage seed-for-seed barter on a percentage basis, and to improve work points and fertilizing work so that cooperatives can achieve self-sufficiency in seeds.

Cooperatives and production collectives should closely supervise and strictly manage seed production, ensuring sowing of proper varieties and contracting out seedling nursing and protection to members only after the collective has immersed seeds in water, kept them under tight cover to foster germination, prepared and sowed them according to the cooperatives' schedule.

Following each crop, a reserve of seed paddy--about 20 percent of the seed paddy total--should be set aside for protection against natural calamities. During the winter-spring season, rigorous cold weather often causes seedlings and newly-transplanted rice to die while lingering warmth provokes seedling overgrowth, compelling farmers to hurriedly till and transplant, thus leading to poor crop yield.

Proper seed production amounts to creating a major favorable condition right at the beginning of a production season.

GRAIN COLLECTION IN NGHIA BINH, DONG THAP, DONG NAI

Hanoi NHAN DAN in Vietnamese 14 Oct 81 p 1

[Article: "Nghia Binh, Dong Thap, Dong Nai Step Up Tempo of Grain Collection"]

[Text] (VNA) As of 5 October, Nghia Binh has purchased nearly 67,000 tons of grain, exceeding the obligation level for the whole year by 3 percent, and representing an increase by 19,000 tons over the whole year of 1980.

The grain sector has coordinated closely with other branches within the province to sign two-way contracts with each cooperative, properly prepare storehouses, sacks and means of transportation, and create favorable conditions for cooperatives to promptly deliver paddy to the state. From now to the end of the year Nghia Binh will strive to purchase an additional 10,000 tons of grain outside the obligation, using it as an achievement to celebrate the Party Congress.

As of 7 October, Dong Thap has delivered 130,129 tons of paddy to the state, reaching 92 percent of the year's collection plan, at a speed 2.5 times faster than at the same time last year.

The provincial party committee and people's committee have concentrated on guiding various echelons and sectors to bring goods and supplies down to basic organizations to exchange for the peasants' paddy, to manage the paddy and rice market, and to strive to achieve planned collection levels ahead of schedule.

As of the end of September, Dong Nai has delivered to the state 2,000 tons in excess of the year's planned paddy obligation level. In general, the collection task has been strictly guided by party committee echelons and administration officials. Although tax collection has reached only more than 60 percent of the year's norms, it is up 20 percent from last year's corresponding period.

TASKS OF CONSTRUCTION SECTOR FOR REMAINDER OF 1981 DETAILED

Hanoi XAY DUNG in Vietnamese No 7, Jun 81 pp 1-2,9

[Excerpt from Ministry of Building report: "Principal Objectives, Tasks, and Measures for the Last 6 Months of 1981 of the Construction Sector and the Construction Materials Industry"]

[Text] The last 6 months of the year consist of a rainy season quarter and a dry season quarter in the north, and in the south during most of that time the weather is unfavorable.

The 1981 plan tasks are still very difficult. Difficulties are still being experienced with regard to conditions necessary for assuring construction and the production of construction materials, including the supplying of materials and transportation to serve the construction schedule and the production of construction materials. Under those conditions, positive steps must be taken to overcome the rainy season and take advantage of the dry season, in order to accelerate production, produce continually during the last 6 months of the year, and assure a high level of work hours during a day and work days during a month. At the same time, we must resolutely concentrate our forces and materials and cooperate closely in order to complete the key construction projects and produce the principal materials as called for by the plan.

It is necessary to inventory all existing materials and equipment at the construction sites and enterprises in order to account for the various types, take the initiative in obtaining materials which are still in short supply, use materials for the intended purpose, resolutely eliminate the haphazard use of materials and equipment, and not use materials and equipment intended for key state construction projects for other purposes. The legal norms must be made the principal tasks and the foremost objectives. Production means and construction materials included in the legal plans cannot be used to carry out self-production plans or secondary production plans.

Self-production plans and secondary production plans must be carried out in correct accordance with Directive No 61/CP of the Premier and Circular 04 of the Ministry.

On the basis of the beginning-of-the-year plan tasks assigned by the Ministry and the municipal and provincial people's committees, the units must continue to exert themselves in endeavoring to do a good job of fulfilling the principal objectives of the plan for the first 6 months of the year.

The Principal Measures

1. On fulfilling the three parts of the plan:

After the issuance of Decision No 25/CP, dated 21 January 1981, of the Council of Ministers, regarding the policy and measures for continuing to develop the right of the state enterprises to take the initiative in production and business and their right of financial autonomy, the Ministry issued Circular 04, providing guidance for the entire sector, which was directly disseminated to the units belonging to the Ministry and to a number of construction bureaus and services in the south and the north. Applying the policy of the state, many units in the sector began to implement the three parts of the plan and made the legal plan the objective of their endeavor, while also further developing the existing latent capabilities, especially regarding labor, in order to fulfill the self-production and secondary production parts of the plan. Most of the units, including units producing construction materials and machinery, construction units, and surveying and design units, have two or three-part plans. Many units have achieved initial results in implementing Decision 25/CP. The value of self-production construction and the production value of some units equalled 8 to 10 percent of the construction and production value of the legal plan. Some units also implemented secondary production plans based on the full utilization of labor, waste materials, and waste products in production or using labor to produce on a contracted-out basis such products as cinder blocks, roofing tiles, and nails, to increase production, etc., in order to provide employment for workers.

However, there are also units which are confused with regard to the implementation of three-part plans, or tend to stress the self-production and secondary production plans, and are not enthusiastic and unanimous in concentrating forces and materials on the legal plan. Instances of leaving the secondary production and self-production plans up to the base level are widespread, and there is a lack of oversight, guidance, and correcting. The Ministry, the combines, the general corporations and corporations, the enterprises directly under the Ministry, and the bureaus and services have not entered deeply into reviewing and controlling the self-production and secondary production plans in order to provide prompt guidance and correction, especially with regard to signing contracts, using materials, marketing products, and distributing income.

In order to rectify the situation of the implementation of three-part plans in accordance with decisions 25/CP, dated 21 January 1981 and 64/CP, dated 23 February 1981, and circular 04/TT-BXD, dated 23 February 1981, the units must perform the following tasks:

a. Unit heads at the various echelons must study and gain further understanding of decisions 25/CP and 64/CP of the Council of Ministers and Circular 04, dated 23 February 1981, of the Ministry, regarding guidance of the implementation of Decision 25/CP. The objectives and norms of the legal plan must be made the foremost objectives in endeavoring to fulfill the plan tasks.

b. The units directly under the Ministry, and the bureaus and services, must officially report the norms of their 1981 self-production plans to the Ministry and the provincial and municipal people's committees, so that they can review them and record supplementary plan norms at the end of June 1981, while also reporting their secondary production plans to the Ministry and the provinces and municipalities. The heads of units must closely review the secondary production plans, approve those plans, and guide the bases in using materials to produce products, in marketing products, and in distributing income in correct accordance with the policies and regulations.

c. When implementing self-production and secondary production plans the base-level units must keep separate books regarding production means, materials, transportation, labor, finances, salaries, etc., and cannot commingle or exchange production means, materials, etc., that are part of the legal plan with those that are part of the self-production and secondary production plans.

d. The marketing of products must be carried out in correct accordance with Decision 64-CP of the Council of Ministers, and products produced in accordance with the legal plan cannot be used to produce goods in accordance with two-way contracts. Products produced in accordance with self-production and secondary production plans must be reported to the Ministry and disposed of in two ways:

-- If the product serves construction and production, priority for its construction should be given to the units in the sector.

-- If the product is a consumer product, a product marketing contract is signed with state commerce. Only if state commerce refuses to market the product can it be sold to other state-operated units.

e. The contracts under the self-production plans must clearly record the quantities of production means, materials, and fuel assigned by the ordering unit and must be reported to the Ministry and the People's Committee. As regards valuable products, the quantities of production means, materials, and fuel supplied by party A must be regularly reported to the Ministry. When party A does not supply production means, materials, and fuel, production and construction should cease. Production means, materials, and fuel must not be borrowed from the legal plan.

2. In addition to rectifying the above-mentioned three-part plans, it is necessary to pay attention to a number of urgent measures:

-- It is necessary to expand the scope and improve the quality of contracting-out, and to contract out efficiently.

-- We must carefully review the designs of the construction projects in correct accordance with the principles of all-out economizing in the use of scarce production means and resolutely changing designs which use too many scarce production means, replacing them with local materials.

-- The base-level units and the construction bureaus and services must review their economic-technical norms.

-- We must review the construction methods that were orginally intended to be mechanized, but which now, because of difficulties regarding POL, tires, and spare parts must be changed over to manual methods, with full utilization of local labor.

-- The combines must take steps to implement plans to supply bricks, tile, rock, sand, and gravel to meet construction needs in each area, especially for the key projects and in the Mekong Delta.

-- We must study and implement Decree No 232-CP, dated 6 June 1981, of the Council of Ministers, promulgating capital construction statutes.

-- During the rainy season steps must be taken to build without interruption, accompanied by the assurance of safety and the stopping of instances of careless construction, which cause waste and slow down the construction rate .

3. We must increase the effectiveness of the party's leadership. It is necessary to strengthen the party committees of the corporations and enterprises so that they can directly lead construction and the production of construction materials. The party committees of the corporations and enterprises must include nearly all of the comrades responsible for leading production, and their structure should not be of the combine variety. The party committee secretary must have leadership ability, understand production, and be experienced in work from the base level on up. The party committees must fully understand the resolutions of the Political Bureau of the Party Central Committee in order to take steps to implement them. They must strengthen the political-ideological education of the cadres, workers, and civil servants. Recently there have been such important resolutions as those regarding circulation and distribution, the ideological task, the organizational task, and the scientific-technical task. We must increase the effectiveness of the trade union and the Ho Chi Minh Communist Youth Union. We must strictly carry out the four systems, carry out the campaign against negativism, launch a revolutionary movement, and launch a continuous, seething emulation movement. We must strengthen the system of control and recapitulate experiences, make prompt evalutations and observations, and have just rewards and punishments. We must strengthen by all means the system of scientific-economic information, guidance information, and command and management information at the construction sites, research institutes, and guidance organs.

HEAVY INDUSTRY AND CONSTRUCTION

MINISTRY OF BUILDING ACCOMPLISHMENTS NOTED

Hanoi XAY DUNG in Vietnamese No 7, Jul 81 p 32

[Sector News column]

[Excerpt] During the first 6 months of 1981 the construction units directly under the Ministry turned over and brought into production and use two construction projects (the Ninh Binh repair shop, capable of repairing 250 vehicles per year, and the Cong Tum wood veneer factory) and 11 other project items. The projects that have been turned over have added the capability to produce for society 6 million square meters of wood veneer, the capability to repair 250 vehicles a year, 800 square meters of workshops and warehouses, and nearly 7,000 square meters of housing and messing facilities. Six key projects attained more than 50 percent of their annual plans: the Bai Bang paper mill, which attained 101.6 percent; the Hanoi yarn mill, which attained 80 percent; the Hoa Binh hydroelectric plant, which attained 64.6 percent; the Lam Thao superphosphate plant, which attained 63.9 percent; the Nha Trang yarn mill, which attained 57.7 percent; and the Hoang Thach cement mill, which attained 53.4 percent of its annual plan.

Construction Corporation No 22 maintained and surpassed the construction schedules of the key Bai Bang paper mill and Lam Thao superphosphate plant projects ,is endeavoring to accelerate the construction rate of the Bai Bang paper mill, and has attained 68.2 percent of the planned construction of project 75325. Therefore, the corporation has attained 53.8 percent of the construction value called for by the annual plan, and has attained 50.3 percent of the annual plan regarding construction worker productivity.

Construction Corporation No 1 maintained the construction schedule of the key Hanoi yarn mill project and concentrated on completing and turning over during the present year such projects as project 75810, which attained 80 percent, and project 66 A, which attained 55.5 percent, of the annual plan. The corporation has attained a construction value equal to 50.6 percent of the annual plan, maintained construction scheduled, and turned over on schedule such projects as the dining hall of the Hanoi Medical College.

Construction General Corporation No 1, the Hai Phong Construction Corporation, Construction Corporation No 7, Water Supply and Drainage Construction Corporation No 1, and Water Supply and Drainage Construction Corporation No 2 attained at least 50 percent of their annual plans.

The construction corporations delivered and brought into use many projects which serve agriculture, public projects, and housing projects, including 120,000 square meters of housing, in which the state concentrated investment capital.

The Quang Nam-Da Nang Construction Service's construction value equalled 57.1 percent of the annual plan. It completed its key projects serving agriculture and turned them over according to plan. Labor productivity per construction worker was 2,017 dong, equal to 57 percent of the annual plan. The Thai Binh, Bac Thai, Dong Nai, Nghe Tinh, Son La, and Song Be construction services did a good job of fulfilling their plans during the first 6 months of the year.

With regard to the production of construction materials, during the first 6 months of 1981 the sector produced 269,500 tons of bagged cement, 148,000 tons of which were produced by the Hai Phong cement plant and 84,500 tons of which were produced by the Ha Tien cement plant. Some 1,010,800,000 standard bricks -- 54.5 percent of the annual plan -- and 642,900 tons of lump lime -- 55 percent of the annual plan -- were produced.

A number of bureaus and corporations attained 50 percent of their annual plans regarding each type of product. Among them were the Quang Ninh Construction Service, which attained 144 percent with regard to cement, 52.2 percent with regard to the various kinds of rocks, and 68.3 percent with regard to lump lime; the Ha Nam Ninh Construction Service attained 144 percent with regard to standard bricks and 80.4 percent with regard to lump lime; the Nghia Binh Construction Service attained 82 percent with regard to tile, 66.4 percent with regard to cement, 54.7 percent with regard to lime, and 52 percent with regard to brick; the Phu Khanh Construction Service attained 61 percent with regard to brick and tile, 57.2 percent with regard to cement, etc.

HEAVY INDUSTRY AND CONSTRUCTION

POWERFUL TRANSFORMER COMMISSIONED IN BIM SON CEMENT PLANT

Hanoi QUAN DOI NHAN DAN in Vietnamese 5 Oct 81 p 1

[Article by Nhu Vu and Tran Son: "110/6--Kilovolt Transformer Commissioned in Bim Son Cement Plant"]

[Text] As one of the principal construction projects in the Bim Son Cement Plant, a 110/6-kilovolt transformer station has been completely installed and put into operation.

This is the largest transformer station ever designed especially for an industrial production enterprise.

The station has two transformers having each a capacity of 40,000 kilovolt-amperes. In addition, the station is fitted with numerous machines and automatic equipments including a system of devices to automatically control all activities of the station.

Along with the main 110/6-kilovolt transformer station, there is also a network of 30 separate transformers to convey a 0.4-kilovolt electric current to each auxiliary carrier [phuj tair] in the production line system of the factory.

The immediate function of the 110/6-kilovolt transformer station is to provide electricity for the construction site of the Bim Son Cement Plant to install and adjust the equipment network of production line No 1 which will be commissioned by the end of this year.

During the installation of the equipment and machines belonging to the 110/6-kilovolt transformer station, workers and technical cadres of the Electric Installation Enterprise (subordinate to Combined Machine Assembly Enterprise No 45 of the Ministry of Building) overcame technical difficulties and a shortage of mechanized construction tools and installed with precision all equipment and machine parts of the station including complex automatic ones.

HEALTH, EDUCATION AND WELFARE

REACTIONARY, DECADENT CULTURAL MATERIALS TO BE UPROOTED

Hanoi HANOI MOI in Vietnamese 27 Sep 81 p 3

[Article by Hoang Thi: "Let Us Uproot the Nests That Speculate in and Disseminate Reactionary, Decadent Cultural Materials"]

[Text] As the policy of the municipality is being implemented, this year the fight to get rid of the reactionary and decadent culture is stepped up more vigorously with many realistic and effective measures that are carried out on a regular and continuous basis. All subwards have control teams in charge of it and, in coordination with order and public sanitation regulations control teams, market management teams and the zone police, take action against any households being found to keep, circulate and use reactionary and decadent cultural materials (books and magazines, pictures, music tapes and records) by searching, making reports, giving warnings and confiscating.

Since 24 May 1981, in the 4 urban wards and a number of towns in Gia Lam and Dan Phuong Districts, over 1,200 tapes, nearly 800 decadent music records and nearly 700 bad books published in Saigon during the U.S.-puppet rule have been confiscated. About the contents of those music tapes and records, almost all of them were of the type of golden music and renovated plays, both modern and classical, with sobbing and heart-rending tunes and lyrics sounding awkward and unpleasant to the ears, weeping for rains and winds, expressing sorrows and sadness and being full of feelings of loneliness, powerlessness, hopelessness and tiredness resulting in a desire to escape from the real life; there also were very reactionary music tapes that praised the way of life of the former Saigon puppet soldiers, encouraged killings of compatriots and destruction of the country and glorifies the ruthless puppet soldiers as "heroes of the era." Among the confiscated books as many as 300 were of the "martial arts" type being advertized as "Chinese love epics" depicting the philosophy of the "wandering warriors," namely, "force determines everything," arousing a sense of adventure and risk taking and the desire for killing and encouraging a way of life leaning toward lawlessness and anarchy; the rest was in almost all cases novels of love and lust disseminating romance, looseness and extravagance, debauchery, "total enjoyment of all earthly pleasures" -- alcohol, smoking, sex, debauchery, immorality, etc., and books of astrology and physiognomy leading people to believing in predestination and superstition; there also were "anticommunist" books of great renown written by those traitors who had been classified by the U.S. imperialists among the "heroes" of the world's anticommunist front.

Being parents, workers of conscience and those who are masters of our lives and our land, we cannot be indifferent, nor can we help being seriously worried about the poison of the above-mentioned cultural materials; particularly while the imperialists and Beijing reactionary expansionists are trying day and night to destroy, encircle and control us and planning aggression against our country, that kind of cultural trash "resonating" the enemy's psychological-warfare arguments and maneuvers will lead to very serious consequences and destroythe morality, soul, belief and reason to live of our people, mostly the young.

To get rid of the reactionary and decadent culture is a part of the ideological and cultural revolution and at the same time of the current fight against the negative signs in society and cannot be separated from the fight against the enemy's psychological war. The recent fight to wipe out reactionary and decadent cultural materials in Hanoi has proved that the amounts of such poisonous and bad materials still circulated in the population are far from small and that the ones that had been confiscated were quite negligible. First of all, we can blame this on parents who, either because they failed to recognize the poison or because of their unhealthy esthetic liking, have brought from the south such cultural materials for their entire families "to enjoy" or have pampered their children to the point of being irresponsible themselves and neglecting teaching them and preventing them from using the harmful materials. But there is another thing we must think about even more: what are the sources in Hanoi of these materials? To wipe out reactionary and decadent cultural materials consists not only of education, persuasion, control and confiscation, but more important the uprooting of the nests that speculate in, store and disseminate the banned poisonous and bad cultural materials.

Truly deserving welcome, commendation and reward are many of our people who have devoted their efforts to watching, uncovering and helping the public security force to follow the leads and to catch red-handed many cases of speculating in, storing and disseminating reactionary and decadent cultural materials, including pornographic movies; dubbing music tapes and dealing in golden music records; dealing in and renting banned books. Some people had been keeping hundreds of Saigon-published books which they rented, earning as much as 7,000 dong per year and, for instance, in May when the school year had ended and the summer vacation of students began up to 1,700 dong per month. Others were specialized in recording golden music tapes on a large scale from as many as 40 master tapes, using full equipment and having a list of all the popular Saigon songs, from which "famous selected golden songs" programs could be selected, with the fees for dubbing such tapes ranging from 8 to 12 dong each. Still others were specialized in dealing in golden music as they stored in their homes 300-400 tapes and earned 30-40 dong of profit per tape, even much more if they dubbed their own tapes. Those were obviously dishonest people who had known that those cultural materials were "nationally prohibited" and their dealing in them was a violation of the law, but because of the attractive profits they were willing to poison the minds of our people and children. Since their business was very suitable for the enemy's schemes and plots, they have unintentionally become his agents working without pay for his psychological war. However, the real experience in life has proved that the distance between the starting point -- being blind and shortsighted because of some immediate profit -- and the sense of lending a hand to the enemy is not great. They must be stopped! The law cannot tolerate their criminal acts.

At the end of May 1981, the Municipal People's Court tried 2 cases of showing pornographic movies, with these items as exhibits: 3 8-mm projectors, 14 very dirty pornographic films, 1 film editor, 6 music tapes and 6 bad books. All 6 defendants received appropriate sentences: Nguyen Tran Cuong, 35, residing at 8 Cao Ba Quat Street, 3 years of imprisonment; Tran Van Thien, 30, 5 Hang Mam Street, 30 months; Pham Ngoc Thai, 40, 31 Hai Ba Trung Street, 30 months; Tran Ngoc My, 30, 11 Lo Duc Street, 2 years of suspended sentence, 3 years of probation; and Luu Ngoc Thang, 31, 2 Ly Thai To Street, 18 months of suspended sentence and 2 years of probation.

On 19 September 1981, the Hoan Kiem Ward People's Court tried Tran Xuan Khanh residing at 6 Phan Boi Chau Street on charges of storing and dubbing tapes and disseminating reactionary and decadent music. Khanh received a suspended sentence of 18 months and 2 years of probation, with confiscation of all of the exhibits: 2 tape recorders, 1 tape eraser, 1 pair of headphones and 119 tapes of reactionary and decadent music.

The above-mentioned trials at the courts were welcomed by the social opinion, which demanded that we continue to prosecute, severely punish and uproot those who speculate in, store and disseminate reactionary and decadent cultural materials.

To fight for eradication of the reactionary and decadent culture is a complex job that must be done on a long-term, regular and continuous basis not only by the organs responsible for controlling and handling the matter but more important by the people, who must grasp the importance of the matter and create an opinion to exert pressure on society for preventing those stubborn people from secretly storing, circulating, dealing in and using various kinds of poisonous cultural materials, and first of all by parents, who must through self-understanding and exemplary conduct maintain a strict control in their own families. Let us resolutely wipe out all reactionary and decadent cultural trash to protect the wholesome cultural and spiritual life of our people and children.

DAC LAC RECEIVES SETTLERS FROM OTHER PROVINCES

Hanoi QUAN DOI NHAN DAN in Vietnamese 13 Oct 81 p 1

[Article by Van Thich: "Dac Lac Receives People Coming from Other Provinces to Build a New Homeland"]

[Text] Since the complete liberation of the country, the New Economic Zones Committee in Dac Lac Province has received a large number of people coming from the provinces of Thai Binh, Nghe Tinh, Binh Tri Thien, Quang Nam-Da Nang and Nghia Binh to build a new homeland.

Over the past 5 years, the province has welcomed 22,205 households with 127,507 members including 64,672 laborers. The people coming from the abovementioned five provinces have been distributed among eight districts in Dac Lac Province but mostly among Krong Pach, Dac Nang, Lac, Ea Sup and Krong Buc Districts. With part of its own population going to build new economic zones, the province has created 13 more new villages in the districts and set up 32 agricultural cooperatives and 21 production collectives. Moreover, the province has assigned a number of laborers to six state farms, two state forests, two work sites and two enterprises. Dac Lac Province has also transferred 2,930 households with 13,520 members including 6,714 laborers from Ban Me Thuot City to the villages in adjacent areas to build new economic zones. To date, the new economic zones have opened new lands with a total area of 31,061 hectares of which 11,772 (including 2,788 hectares of wet fields) have been adequately prepared for cultivation. Owing to the active assistance given by the provincial administration at all levels, the new settlers have enjoyed a stable life and won numerous successes in production.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CAMPAIGN TO STAMP OUT DISTORTIONS, RUMORS LAUNCHED

Hanoi HANOI MOI in Vietnamese 2 Oct 81 pp 1, 4

[Editorial: "Smash Distorting Propaganda, Resolutely Oppose Acts of Spreading False Rumors"]

[Text] In building and defending the socialist fatherland, our people must regularly oppose aggressive acts and sabotage tricks of Chinese expansionists and American imperialists as well as other reactionary influences. One of the insidious sabotage tricks of the enemy is to disseminate distorting propaganda and false rumors, so as to shatter our fighting spirit, cause internal disunity, and subdue the people's minds, paving the way for opportunistic acts of political, economic, and military sabotage, etc.

Capitalizing on the low level of consciousness of a number of people, or on their pessimism about or their dissatisfaction with difficulties in production and living conditions, and on their inability to understand the nature and phenomena of the present juncture and to strive to overcome immediate obstacles, they distort policies, spread false rumors, and generate unfavorable public opinion on current events, such as the policies of market management, prices, drafting youths into the army, etc.

Moreover, they circulate books, newspapers, and cultural products of a reactionary and decadent nature, so as to poison those who long for the vulgar life and those who engage in illegal revelry, especially a number of backward youths. Because of the dangerous nature of antirevolutionary propagandists for the fatherland and people, our state has decided to condemn and severely punish their criminal acts.

Article 15 of the regulations on punishing antirevolutionary crimes asserts that the above acts are crimes of antirevolutionary propaganda and specifies various forms of punishment against "those who, for antirevolutionary purposes, have perpetrated the following crimes:

1. Propagandize against, incite the people against the people's democratic administration, and misrepresent the socialist regime;

2. Propagate enemy psy-war views, misconstrue the resistance against the United States, for national salvation, and for regaining national independence and unification, spread false rumors, cause confusion among the people;

3. Propagandize for the policy of enslavement and for the decadent culture of imperialism;

4. Write, print, circulate, and conceal books, newspapers, movies, and pictures or other materials having antirevolutionary contents and purposes."

The above crimes are punishable by imprisonment, from 2 to 12 years.

At present, the difficulty is how to distinguish between views and opinions coming from the enemy and those coming from backward people, or dissatisfied elements, or genuine complaintants, etc.; and it should be noted that the enemies themselves also have taken advantage of good and kind people to achieve their dark designs. We don't condemn people indiscriminately, hurridly, and carelessly; but this does not mean that we should relent on this battlefield. The first and most effective thing for cadres and party members to do is to speak and work in accordance with the policies of the party and state organs and to make no irresponsible statements, nor say what they don't know well or what is not within their province. Besides, while listening to views and opinions of the masses, cadres and party members must, on the one hand, courteously and sincerely welcome accurate and constructive criticism and, on the other, they also must vigilantly sift wrong from right, so as to explain misunderstandings and misstatements of the people and to correct misdeeds. To do these things properly is to create conditions for assembling forces and mobilizing public opinion to struggle against those who deliverately distort policies and spread reactionary propaganda with vicious purposes. Leading echelons of the party; the administration; and mass organizations at organs, enterprises, and schools are bound not only to manage technical and productive work of cadres and workers but, also, to guide opinion within their units and to direct compliance with regulations on making statements and conducting propaganda within their units through the introduction into internal meetings of opportunities to disseminate policies, analyze views and words contrary to policies and guidelines, and also to properly solve contradictions and complaints in a resolute, patient, and judicious manner. In doing so, they will mobilize good people; win over backward people to their side; isolate reactionary elements; and create a healthy atmosphere, a rising emulation movement, and an untarnished living pattern within their units--all that is needed to defeat enemy psy-war.

THREE HOODLUMS EXECUTED IN HANOI

Hanoi HANOI MOI in Vietnamese 14 Oct 81 p 4

[Article: "Execution of Three Hoodlums"]

[Text] On 10 and 11 November, the Hanoi Municipal Council on Executing Court Sentences carried out the death penalty on three hoodlums, at two places in Dan Phuong District and Hoan Kiem Ward.

They were:

-- Le Van Thuan, born and domiciled in Thanh Mac hamlet, Thanh Da village, Phuc Tho district. Thuan and accomplices were convicted for murder and robbery. Thuan shot and seriously wounded Sister Hoang Thi Be in Tho An village, Dan Phuong district in an attempt to rob her of her bicycle at Tre slope (Dan Phuong village, Dan Phuong district) on 15 January 1980.

-- Nguyen Van Ha, residing at 14 Van Chi Lane (Bach Mai) and Duong Xuan Thanh, residing at 26 Thinh Yen street (Hai Ba Trung Precinct), were convicted for murder. On the afternoon of 25 April 1979, while committing robbery at Hang Dau street, they were observed by Pham Van An. Ha and Thanh stabbed the victim to death on the spot with sharp knives.

The execution of the death penalty on the three convicted criminals is a warning against those engaged in violent hooliganism and those perpetrating major crimes against the people.

YOUTHS WORKING FOR CHINESE INTELLIGENCE ARRESTED

Hanoi HANOI MOI in Vietnamese 2 Oct 81 p 2

[Article by Ha Phan: "Traitors to the Fatherland Nabbed"]

[Text] Nguyen Bac Ha, 20 years old, residing at 69 Giang Vo; Nguyen Dinh Hai, residing in Thanh Xuan Street; Hguyen Dinh Chiem, residing at 283 Kham Thien Market Lane; and Nguyen Ngoc Tao, living in Haiphong, were youths who refused to work, delighted in good food and clothing, and always dreamed of a luxurious and debauched life. They were imbued with reactionary and decadent manners and ideas. One of them became a hoodlum. Ha, Hai, Chiem, and Thao got together and discussed ways to flee abroad.

Carrying out this scheme, Nguyen Bac Ha met Bui Tuan Long (in Coc Leu, Lao Cai)--with whom he got acquainted in February 1979, at which time Long had been temporarily evacuated to Hanoi--and asked him to act as a guide. They sold three family bicycles for 1,700 dong and spent the money on train fares, travel expenses, and clothing, passing themselves off for Coc Leu evacuees on the way home for harvest crops. On the evening of 30 May 1980, the five reached the southern bank of the Red River (on the Vietnamese-Chinese border). Long, the guide, then returned to Hanoi while Ha, Hai, Chiem, and Tao crossed the river into Hekou. After 3 months' training at the Chinese intelligence organization, the four chaps were given some goods; and, disguised as smugglers, they were sent back to Vietnam for investigating our armed forces' border defense and control, enticing and urging people to flee to China, and robbing weapons from our armed forces, etc. They befriended two citizens in Muong Khuong District. But their scheme aborted because on 30 August 1980 they were discovered and nabbed by a control unit of the Muong Khuong public security section.

Based on the confessions of Ha, Hai, Chiem, and Tao, the investigating organ has traced back their involvement in crime to their families' lax management and education of children. They used to be away from home, roving around all day long. In addition, they were influenced by enemy psychological warfare. In light of this case, we should raise vigilance and resolutely smash enemy psychological warfare arguments, preventing our children, brothers, and sisters from blinding themselves to the truth and betraying the fatherland--just like the Ha, Hai, Chiem, Tao group.

OFFICE WORKER CENSURED FOR COUNTERPROPAGANDA STATEMENTS

Hanoi HANOI MOI in Vietnamese 22 Sep 81 p 1

[Article: "Hanoi Harbor Workers and Cadres Fight Counterpropaganda Line"]

[Text] Implementing Directive 07 of the Standing Committee of the Municipal VCP Committee on fighting against enemy psychological warfare and all counterpropaganda from bad elements, the Hanoi Harbor Enterprise recently held a session for cadres, workers, and officials to criticize Nguyen Khac Lieu, an employee of the labor and wages office of the enterprise, for certain statements contrary to propaganda on the line and policy of the Party and the State.

Each person harshly analyzed the harm of Lieu's statements, which caused suspicions and eroded trust in the Party and the State policies in the city on the part of a number of people around him. They recommended that the authorities take formal action to deal severely with Lieu.

The Hanoi Harbor Enterprise used the criticism session to instruct cadres, workers, and officials to keep on guard against the enemy's psychological warfare effort and to fight those who, like Nguyen Khac Lieu, spread distorted propaganda.

PEDICAB PEDDLER ARRESTED FOR ANTIREVOLUTIONARY PROPAGANDA

Hanoi HANOI MOI in Vietnamese 2 Oct 81 p 2

[Article by Tran Phan: "Disseminating Counterpropaganda"]

[Text] K was a resident of Thanh Luong Ward (Hai Ba Trung Precinct). During the temporary occupation of the capital by French imperialists, he sold medications on the curbs and at tramway stations. After the capital was liberated (1954), like other people having no professional skills and no stable life, he was employed by the administration as a railroad worker. But, some time later, he quit and engaged in miscellaneous work. To help him lead a normal life, in 1956 the local administration gave him land to build a house on and arranged for him to be employed at the Forestry Native Products Corporation. In 1965, along with his family he went to Phu Tho to build a new economic zone there; but later, abandoning Phu Tho, he returned to Hanoi. Nevertheless, the local administration gave him land to build a house on for the second time and allowed him to register as a premanent resident. From that time, he worked as a pedicab operator.

Although he was helped many times by the administration, economically and in his livelihood, K, a bad man by nature, turned to drinking and disturbing public order and security, ending up with publicly attacking administration guidelines, as well as active neighborhood cadres and party members. Taking advantage of the difficult situation of the nation's economy and living conditions and of a number of lingering negative aspects, he attacked party and state leadership.

He practiced very cunning tricks: While hurling insults, he probed the reaction of the people around him. At first, he spoke in a low voice and used innuendoes. If there were neither reactions nor protests, the following day he would lump negative phenomena such as bribery, theft of socialist property, difficult living conditions, etc., as part and parcel of our regime. He would put down a cup of alcohol near him while raising his voice, thus conveying to the people around him the false impression that he was babbling while drunk.

If such name calling was not suppressed, he would return the next day with louder insults. At first, he interspersed insulting his wife and children and insulting cadres, then, little by little, augmenting his pitch, he repeated almost textually the newscasts of enemy radio stations.

More brazenly, he villified the regime, party leadership, and leaders as well as our people. Outraged at his criminal acts, the people sent written complaints to the administration, suggesting harsh prosecution. He has been arrested and detained pending appearance before the court.

We condemn his reactionary acts and suggest that judiciary organs mete out harsh punishment. The above story has taught us to be vigilant about bad elements assembled in drinking sessions for counterpropaganda purposes. We must promptly struggle to condemn them or to keep responsible organs posted for stern prosecution.

INTERNATIONAL RELATIONS, TRADE AND AID

SRV: CREATIVE LABOR, COOPERATION WITH USSR

Moscow EKONOMICHESKAYA GAZETA in Russian No 27, Jul 81 p 20

[Article by A. Stroganov under the heading "In the Cooperating Socialist Countries"]

> [Text] On 2 July the Vietnamese nation marks the fifth anniversary of the day on which the Socialist Republic of Vietnam [SRV] was proclaimed. In the ensuing years, a united, independent and free Vietnam, under difficult conditions, has attained considerable advances in order to accomplish the tasks, set by the 4th Congress of the Communist Party of Vietnam [CPV], of building socialism. Today, SRV workers show great enthusiasm in carrying on socialist competition for the prompt fulfillment of the state economic plan for 1981 and for creating a suitable atmosphere for the 5th Congress of the CPV.

In the past five-year period, the Vietnamese nation, under conditions of postwar hardship, characterized by the detrimental intrigues of the imperialist powers and the direct aggressive acts of the Beijing expansionists, has attained considerable advances in strengthening its socialist state, establishing the material and technological bases for socialism and consolidating the country's defense capability.

From 1976 to 1980, the gross agricultural product increased by 18.7 percent. An additional 650,000 hectares, of land were cleared.

The output of industrial products grew in 1980 by 17.3 percent in comparison with 1975; this figure includes the rise in machine-building by 60 percent.

Hundreds of new industrial enterprises and other economic units were built in the country.

Freight turnover increased considerably for all forms of transportation. An additional approximately 1,500 kilometers of railroad line and over 4,000 meters of mooring line were restored or constructed. Transportation was supplemented by 70 locomotives and almost 3,000 railroad cars and by seagoing vessels with a total freight capacity of 170,000 tons.

The number of qualified workers has grown. Over a fifth of those employed today have a higher or secondary specialized education. Much has been done, especially in the south of the country, to give the population employment; in that region, 3 million unemployed persons were counted after liberation.

In the south of Vietnam enterprises belonging to the predatory bourgeoisie have been nationalized. Private enterprises in industry, trade and the transportation sector have been converted to mixed state-private enterprises.

The most important economic and social tasks for the SRV in the next years, as was noted at the seventh session of the National Assembly (December 1980), are to increase production, to perfect administration, to stabilize and further develop the economy, to improve the life of the nation, to reinforce defense capacity, to continue to create the material and technological bases for socialism, to carry through the socialist reformation in the south of the country, to consolidate and perfect socialist relations of productions in the north and to consolidate relations, especially with Laos and Kampuchea, and establish cooperation with the Soviet Union and other member nations of the Council on Mutual Economic Assistance.

In 1981, it was planned that 15 million tons of food crops with the emphasis on rice would be harvested in the SRV (including 12 million tons of rice). In the animal husbandry area, it was foreseen that 1981, in comparision with 1980, would bring an increase by 2 percent in the number of buffalo and cows, by 3.3 percent in the number of swine and by 7 percent in the number of head of domestic fowl.

Basic branches of industry will continue to grow. In comparison with 1980, the production of electrical energy will grow by 6 percent and coal production by 10 percent. The output of phosphorous fertilizer will rise by 10 percent.

A considerable part of 1981 capital investments will be directed at agriculture in order to increase production of grain and food crops and those with uses in technology. In industry, particular attention will be given to the construction of the "Falay" electric station, coal mines and other important economic units. Capital investments in the transportation sector are being concentrated on expanding and constructing Haiphong harbor and a number of others.

The advances attained by the Vietnamese nation in the past five-year period are closely related to the fraternal assistance of the Soviet Union and other nations of socialist cooperation. The USSR and SRV are extending and consolidating close economic and commercial cooperation on the basis of full equality, mutual advantage and fraternal mutual assistance.

Last year marked the observance of the 25th year since the signing of the first trade agreement between the two countries and the first agreement stating the Soviet Union's intention of rendering aid in the Vietnamese economic recovery without repayment. In the ensuing period, about 200 industrial enterprises, state farms, institutions of learning and other units have been restored, reconstructed, and built under the assistance of the USSR in Vietnam.

At present the Soviet Union is cooperating with the SRV in building a whole series of industrial and other units. We must mention among these the hydroelectric station on the Mekong River, the largest such station in Southeast Asia with its capacity of two million kilowatts, the cement plant in Binshon with a productive capacity of 1.2 million tons per year, the "Hetam" coal mine with a 2.4 million ton annual capacity, the "Falay" heat and electric plant, the "Laokay" mine capable of producing up to 1.5 million tons annually of apatite concentrate, the diesel motor plant, the nitrogenous fertilizer and superphosphate plants and Haiphong harbor.

Prospects that economic cooperation would grow in scope and in depth were revealed in connection of a visit in the USSR of a party and government delegation from the SRV in November 1978. During the visit a Treaty on Friendship and Cooperation between the USSR and the SRV and a number of economic agreements were signed. In conformance with these, the USSR will render the SRV economic and technological assistance in the construction of large-scale economic enterprises with great significance for the further development of its economy. The Soviet Union will aid Vietnam in completing construction of a number of facilities, technological assistance for which was terminated by China. Agreement was also reached that the basic orientation of long-term scientific and technological collaboration would be established.

In a speech at the Kremlin on 3 July 1980, during the party and government delegation's visit to the USSR from the SRV, Comrade L. I. Brezhnev stated: "Now we have taken on much more extensive tasks than previously. It suffices to say that we are already able to undertake such a large-scale project as locating and obtaining rich petroleum and gas deposits on the South Vietnamese shelf."

Cooperation in this area is foreseen by the intergovernmental accord signed in July of last year. In Moscow on 19 June 1981 an agreement was signed on establishing a joint Soviet-Vietnamese enterprise for geological exploration and for obtaining petroleum and gas on the South Vietnamese continental shelf. At the same time the protocol was signed for an agreement and a plan undertaken in connection with complex geological exploration and minerals location by engineers and geologists. This agreement of great economic and political scope is described by the newspaper NYAN ZAN as opening the way to creation of a Vietnamese gas and petroleum industry, the development of which has a special place in the cause of the country's socialist industrialization.

The economic, scientific and technological cooperation of the SRV with other countries of the Council on Mutual Economic Assistance is being expanded; the SRV has been a member of the Council since 1978. In conformance with the Comprehensive Program of Socialist Economic Integration, the fraternal nations aid Vietnam in developing various branches of the economy. Thus, in January of this year, a general agreement on multifaceted cooperation on accelerating scientific and technological development in the SRV from the present until 1990 was signed by the interested member nations of the Council on Mutual Assistance.

The Secretary General of the CPV Central Committee, Comrade Le Zuan, appearing on 25 June at the first session of the 7th Convocation of the SRV National Assembly, expressed sincere gratitude to the socialist nations and primarily to the Soviet Union, which had rendered to Vietnam the greatest, most multifaceted and effective aid.

"In the future, too, we will continue extensive cooperation with the USSR, consolidating fraternal friendship with the Soviet people," declared Le Duan. "This is the foundation of our state and Party international policy and the fundamental position originating in the revolutionary nature of two Marxist-Leninist parties and two socialist states joined by common ideals. This is the basic strategic direction that will guarantee our nation new victories in the struggle to defend the homeland and to build socialism and consolidate the position of socialism on the Indochinese peninsula."

INTERNATIONAL RELATIONS, TRADE AND AID

EDITORIAL CALLS FOR MORE SOURCES OF EXPORT GOODS

Hanoi HANOI MOI in Vietnamese 23 Sep 81 pp 1, 4

[Editorial: "Increase Sources of Export Goods"]

[Text] The accelerated pace of economic development has reached such a level in today's world that no country can exist without economic relations with the outside. Those economic relations take the form of import and export of goods and raw materials.

Over many years of economic construction and development, we have accumulated a great deal of experience in this matter. To import more, one must export more. Exports have the positive effect of disposing conditions for promoting production in a developing nation, updating equipment and industrial procedures to meet the constantly growing technological and artistic needs, improving the way trends and business are conducted, and providing the foundation for solutions to problems of wages and jobs and increasing the income of workers.

Looking at Hanoi's export operations, we see that some preliminary developments have taken place. In spite of many difficulties with raw materials, sources of export goods have increased. The usefulness of exports to imports and the good they do agricultural and industrial production have been more clearly defined. Economic zone planning and export goods planning are gradually being initiated. The ability to develop sources of export goods is still limited, however, because execution is not yet well organized, coordination among relevant sectors and between the national center and localities is still disjointed, and goods distribution is not yet rational in all aspects. Many goods with strong potential have not yet been fully exploited. Many new sources of goods have potential for development right here in the city, like polishing precious stones and separating mica into sheets for export, but no agency has come forward as yet to invest in such production.

One of our very basic advantages today is that awareness of the export effort is being intensified in all sectors and levels. But this unanimity should manifest itself in synchronized changes in such sectors as industry, handicrafts, agriculture, foreign trade, commerce, labor, finance, banking, and communications and transportation, with an aim to rapidly increase sources of export goods of ever finer quality and value.

The foreign trade sector, in its role as planner for the city, must carry out its function of researching and organizing sources of export goods in compliance with the planning guidance of the national center and of localities. Suburbs must diligently implement the practice of planning zones and agricultural products and raw materials already found locally or available nearby. Industrial and handicrafts sectors, with help, in the form of raw materials and capital, from such sectors as agriculture, foreign trade, and banking, struggle to raise the quality and quantity of goods and arrange production cooperation with a number of key items, like bicycles, electric fans, and watches. Rapidly develop traditional goods, like Bat Trang pottery. Start new trades with good potential. One thing urgently needed today in reference to export goods is to be very flexible and grasp the demands and desires of the world market, invest appropriately in technology and art (including fuel and packaging) to obtain high value with the use of only a small amount of raw materials or only ordinary materials. Mobilize production forces to participate in the effort to produce export goods, including free-lance craftsmen and artisans who mass-produce works or make them one at a time. In order to adequately compensate the producer, new policies must be applied to calculate pay bonuses and determine a price commensurate with the quality of the product they turn out. In the cooperation among sectors and levels and production cooperation among agencies, diligently avoid difficulties that should not occur and avoid useless, cumbersome red tape.

The rapid expansion of sources of export goods is the responsibility of all sectors, levels, and the people of the city. Let us resolutely struggle to make Hanoi a strong unit in the export effort, to make a positive contribution to the development of the Fatherland and to the development of the capital.

PARTY ACTIVITIES AND GOVERNMENT

NEW VCP MEMBERS RECRUITED IN HANOI

Hanoi HANOI MOI in Vietnamese 14 Oct 81 p 2

[Article by Tran Trong Que: "In the First 9 Months of 1981, Hanoi Party Organization has Admitted 3,098 New Members"]

[Text] In the past 9 months, the Hanoi party organization has admitted 3,098 new members (with 50 percent from Youth Union members, 29 percent from workers directly involved in production, and 20 percent from scientific-technical cadres).

Despite a heavy work schedule and many difficulties in leadership over carrying out the political task and organizing the masses' life, party organizations have stepped up party development in each zone by opening training courses for recruits, in which special topics were discussed. Recently, the Gia Lam district party committee held a forum with the participation of party committee, trade union, and Youth Union secretaries as well as party recruits, to exchange experiences on how party recruits strive to improve themselves and how party committee echelons screen and admit new members. At the meeting, party recruits voiced their sincere wish to become members. Those admitted over the past 9 months are trusted and loved by the masses for their helpful work. Many comrades have been assigned important tasks at the primary level, working as deputy directors, supervisors and deputy supervisors, bureau chiefs and deputy bureau chiefs, production unit chiefs, etc. Due attention notwithstanding, party development work still is uneven. Only about 30 percent of basic organizations have been doing this work. The reason is that party committee echelons, especially at the chapter level, have not yet thoroughly and deeply understood Directive 15 of the Standing Committee of the Municipal Party Committee, as well as Directive 72 of the Secretariat of the Party Central Committee. As a result, in guidance work, they have not tied party building closely to carrying out the political task, blaming a very heavy schedule for their failure to develop the party. Owing to a poor spirit of responsibility, they have had no plans for concrete and regular party development. They lacked control and supervision and even showed fears of encountering difficulties in investigating party recruits. Mass organizations such as trade unions and the Youth Union, from the city down to the primary level, have pledged to take part in developing the party; however, their movement lacked steadiness.

If party committee echelons do not urgently overcome the above shortcoming and concentrate on guidance, the municipal task of recruiting new members for 1981 will achieve low results and will not meet the requirements of the municipal political task.

Notice 11 TB/TU dated 12 May 1951 of the Standing Committee of the Municipal Party Committee clearly states, "We are determined, not to let party recruiting task slip behind that of last year, but rather to strive to do better, both quantitatively and qualitatively," (in 1980, the entire city admitted 5,053 party members).

At present, with just 2 months left from the year, we should concentrate on strictly guiding this work with the following activities:

-- Party chapters should look again at the 1981 recruits to see whether they still meet the standards, then report the findings to the chapters for discussion and decisionmaking before inviting comments from the masses. In case these recruits still meet the standards, individual files whould be established for party chapters to consider, then for higher party committee echelons to finally approve.

-- Party committee echelons should take active measures to help chapters carry out screening procedures, especially the investigation of recruits. Party committee echelons should discuss with the administration and mass organizations to create all conditions for party members in charge of investigation to do their work promptly and successfully.

REASONS FOR STEEP PRICE INCREASES EXPLAINED

Hanoi TIEN PHONG in Vietnamese 13-19 Oct 81 p 1, 2

[Interview with Tran Xuan Gia, State Price Commission member, by unnamed reporter, date and place not specified]

[Text] [Question] Please explain why the state decided recently to adjust prices on many categories of goods with rather high increases?

[Answer] Prior to the recent adjustment decision, our price system was based on raw materials and agricultural products purchasing prices, which were still low at the time. In reality, over the past several years these prices have increased five and six-fold. Prices on imported supplies and equipment have also gone up. At present, we no longer import supplies and equipment at 1958-1960 prices, but rather at new higher ones. Purchasing prices of the capitalist market are even 30 to 40 percent higher than that of the Council for member nations of the Mutual Economic Assistance. In fact, in terms of Vietnamese currency, prices on imported goods have increased approximately ten-fold.

Moreover, pricing policy must also take into account currency purchasing power and resolution of relationships between accumulation and consumption, between industrial production and agricultural production, between supply capabilities and commodity consumption needs, between living conditions of various population strata, between state-directed prices and free-market prices, etc.

These are very complex economic and social problems, and since all these factors have undergone big changes recently, the state urgently had to adjust prices upward to make them reasonable.

Despite the adjustment, the state continues to spend billions of dong per year compensating for losses on commodities essential to the livelihood of workers, civil servants, the armed forces, etc. The state applies high price policy only to high grade and luxury goods, and to goods subject to restricted consumption.

[Question] Please tell us specifically how many types of retail prices on consumer goods we now have, and how we apply them?

[Answer] At present, the state price system includes 3 types of retail prices on consumer goods, corresponding with 3 commodity funds, and following 3 formulas of distribution to different consumers in conformity with state consumption policy.

1. Supply prices on essential commodities for the armed forces, workers, civil servants, college, high school and vocational school students, etc, and other policy objectives are regulated by Directive 109-CTTW of the Party Central Committee Political Bureau. These are low prices, closely linked to salary, and change only when pay rates change. For instance: Rice, .40 dong per kg; bicycle tire, 11 dong apiece, etc.

2. New state-directed retail prices covers commodities most of which are specified in Decision 120-CP of the Council of Ministers on 29 May 1981.

Formerly, these prices were usually called prices guaranteeing [providing a profit for] business. For instance: Rice, 5 dong per kg; bicycle tire, 100 dong apiece, etc.

These new directed retail prices apply to commodities essential and important to the entire people and are used to guide the exchange relationships in two-way contracts with farmers. Hence, they are state-directed unified and stable prices, which no one can arbitrarily change.

3. Commercial business retail prices apply only to a number of commodities subject to restricted consumption, such as cigarettes, alcohol, coffee, etc, and high-grade, and luxury goods. At present, in scattered places there is the tendency to include on the above list a number of commodities essential to the people's life. The state has issued directives to correct this phenomenon.

Retail prices on the various categories of commodities have been adjusted for some months.

Since Octover 1981, the state has adjusted purchase prices and wholesale prices. This adjustment involves only state-operated and collective economy sectors, and does not involve the retail price system which the state has just adjusted. Hence, rumors that the state will raise retain prices on consumer goods even more are not true.

[Question] And now, how does the state adjust purchase prices of agricultural products, and purchase prices as well as contract-order prices of handicraft products?

[Answer] Along with the adjustment of retail prices on industrial consumer goods, since October 1981 the state has increased purchase prices of agricultural products five and six-fold in the north and Former Zone 5. This is a big effort aimed an encouraging development of agricultural production, mobilizing peasants to save on consumption and sell more products to the state. At the same time, this price adjustment provides the opportunity for rebuilding the rate exchange relationships between industry and agriculture so as to fit in with the revolutionary situation and tasks in the new stage, and to accommodate the exchange and trade relationships between our country and other ones in the world. This adjustment also has the effect of increasing agricultural product exports, as well as commodity and supply imports, in support of production and the entire people's livelihood--especially agricultural production and the farmers' livelihood (fertilizer, insecticide, agricultural machinery, etc).

As for handicrafts and small industry production, the state on the basis of recently-adjusted retail prices on consumer goods and wholesale prices on supplies and raw materials, has issued directives to redefine the income levels, contractual prices, and product purchase prices of these two production sectors.

[Question] Please tell us about the impact of the current price adjustment on production and the people's livelihood?

[Answer] First of all, we should affirm that the central goal of our party and state economic policies is to step up production, develop the national economy, and ensure and stabilize the people's livelihood.

A new thing in the current price policy is to gradually eliminate the price support system, to encourage individuals and units to do excellent production work, achieve high productivity, overfulfill state plans and strictly honor economic contracts with the state. This is a positive effect of the price adjustment, and it contributes to promoting production development.

The state has also carried out synchronized measures to raise salaries, improve distribution and circulation, increase purchase prices on agricultural products, handicraft products, etc. These efforts all have the effect of encouraging production and ensuring stable living conditions for the people.

Price policy is very important, but it can generate favorable effects only on the basis of an evenly and securely developed national economy, and with the simultaneous implementation of other economic policies of the party. Especially in the present situation of our country, carrying out that price policy involves a complex struggle, which must be tied closely to proper distribution and circulation, market management, and fighting crooked merchants and speculators who hoard goods, raise and dictate prices, etc.

Members of the Youth Union and other youths are assault combatants on the productive labor front, and also on the front of struggle for price stabilization and market management.

STATE PRICE COMMISSION CHAIRMAN EXPLAINS RETAIL, SERVICE CHARGE CHANGES

Hanoi NHAN DAN in Vietnamese 26 Oct 81 pp 1, 4

/Interview with Doan Trong Truyen, Chairman of State Price Commission, by NHAN DAN: "Concerning Changes in Retail and Service Changes"; date and place not specified/

> /Text/ NHAN DAN interviewed Doan Trong Truyen, Chairman of the State Price Commission, concerning a number of problems involving changes in retail and service charges. Below are the questions and replies:

/Question/ Would you let us know your opinions on the policy basis for changing the retail and service charges during the past few months?

/Answer/ Our system of consumer goods retail and service charges was formed during the years from 1958 to 1960. To the present time (before the recent charge adjustments), they have basically remained stable and have had an active effect in assisting to stabilize the lives of the laboring people. This was an extremely great effort by our party and people under the conditions of a still undeveloped economy, protracted war and continuous natural disasters. However, they are no longer suitable and have caused many negative effects. Therefore, the recent improvement of the consumer goods retail and service charge system was an urgent requirement. This adjustment was closely coordinated with other methods aimed at developing an active effect on production, stabilizing living conditions, redistributing the national income on a total society scale, assisting in gradually resolving supply and demand relations and struggling to stabilize the market, prices and national finance.

Directive 109 of the Political Bureau stated: Price adjustment relies on the principle of "consumer goods retail prices must be limited to the extent that they cancel and compensate for losses of the consumer goods in general and assure the state a business profit; and must originate from a policy of use consistent with actual conditions at the present time depending upon each group of products and each consumer for which the state sets retail prices along a course of little accumulation or at cost for essential goods and a higher accumulation for other types."

Based on the directive of the Political Bureau, the Council of Ministers issued Decision 220-CP on 29 May 1981 to adjust retail prices as has been recently achieved in accordance with the following primary policy:

Essential goods supplied the armed forces, workers, civil servants (consisting of retired individuals and those unable to work due to poor health), and students of high-level colleges and vocational schools will remain as before. These types of goods are those supplied at a fixed quantity or not at a fixed quantity. Goods at a fixed quantity are those such as grain, fish sauce, meat, fish, sugar, monosodium glutamate, fuel, cloth and laundry soap. Goods not supplied at a fixed quantity are those such as bicycle spare parts (tubes, tires and sprocket wheel chains), straw mats, waterproof nylon cloth, small table fans, thermos bottle liners and tea.

The supply of vegetables and salt will be assured but the selling price will be adjusted and they will be counted as part of the grain subsidy as previously done.

A number of types of essential goods such as grain, milk for children and the sick, writing paper, textbooks, etc. will be sold at cost by the state and many types will be sold at a loss.

For other consumer goods, the price will generally assure compensation for production and circulation expenses with great or little accumulation in accordance with each type aimed at assuring the requirements of expanded reproduction.

High-level goods will be sold at a price with a high accumulation level in order to regulate income and guide consumption.

/Question/ Under conditions in which the economy is still encountering difficulties, we also have many types of prices applied to other recipients. Would you let us know about those types of prices?

/Answer/ The state is carrying out a policy of distribution to consumers in accordance with three different types of prices (as pointed out by Directive 208-CT on 20 October 1981 of the Chairman of the Council of Ministers concerning retail and service charge directed price system management):

a. The supplied price is closely connected with wages and is applied in the retail sale of essential goods supplied at a fixed quantity or not at a fixed quantity to the armed forces, workers, civil servants, students and other recipients supplied in accordance with policy as stipulated in Decision 218-CP of the Council of Ministers.

The amount of trade in these goods accounts for a fairly large percentage of the expenditures of worker and civil servant families.

b. The new retail directed prices of the state are applied to those types of goods essential to the lives of all the people; goods used for exchange in two-way economic contracts with producers (farmers, salt producers, fishermen, handicraftsmen, etc.); goods supplied for the requirements of enterprises, hospitals, state agencies and recipients receiving in-kind subsidies precisely in accordance with the system; and important goods sold the armed forces, workers, civil servants, students, etc. in excess of those goods sold at the supplied price.

The level of these types of prices for primary goods was recently stipulated in the appendices of Decision 220-CP on 29 May 1981 and has been stabilized. Commerical organizations must sell to the recipients above at precisely the stipulated price. This matter is extremely important because the actual income of the workers and civil servants as well as the farmers and other levels of labor depends to a decisive degree on the supplied price and the state retail price for about 40 goods of types a and b for which the prices have been stabilized. We will announce the names and specific price levels for these types of goods in order that everyone will know and join in coordinated efforts for good achievement.

c. The commerical business price is applied to a number of types of goods which are not essential or important such as high-level expensive types (good wrist watches, velvet, silk cloth, good shoes and sandals, etc.). These prices must be actively supervised depending on the supply and demand situation and the actual price fluctuations on the market.

Application of commercial business prices is extremely essential under conditions in which the incomes of the various levels of peole still vary greatly; because part of the people have incomes from private economy and trade on the free market, their buying power is high. These prices are used to regulate income, control consumption and increase state revenue while simultaneously having an effect of resisting speculation and illegal trade.

The state advocates reserving essential and important goods to production and life to supply and sell the armed forces, workers and civil servants, and to exchange with producers in collective areas and individuals by two-way contracts. Under conditions in which these goods are still scarce, the state does not advocate normal sales at the commerical business price because in such a manner, speculative resale would occur. An extremely important problem is that distribution must be made to commodity funds in order to answer other requirements and to apply other types of prices. In the spirit of that instruction of the Standing Committee of the Council of Ministers, responsible sectors at the present time are coordinating to classify the commodity funds above and to assure proper achievement of pricing policy as well as the commodity distribution policy in general of the state.

/Question/ How have the price changes been handled in comparison with the incomes of the different classes of the people?

/Answer/ Adjustment of retail prices goes hand in hand with calculation of the cost of living and the actual wages of the workers and civil servants to assure there is no reduction on the basis that the prices of supplied goods remain unchanged and the prices of other important goods are adjusted upward and maintained with no sales at a variable commercial business price. In accordance with this method of calculation, the cost of living index doubles after price adjustment and consequently, the government advocates a one-time basic wage subsidy.

Resolving the problem of the basic standard of living is on the basis of developing production with increasing productivity and efficiency. In accordance with Directive 109 of the Political Bureau, along with wage compensation, in order to assure the standard of living of the wage earner, an initial important problem is how to assure that workers have sufficient jobs and to expand the scope of the contract and piecework wages system in a proper manner in order for the workers to have productive jobs and from there to raise incomes; at the same time, we must assure the supply of a sufficient fixed quantity at stable prices of essential goods as stipulated; and management must be strengthened with efforts made toward stabilizing market prices because a portion of the wages of the workers and civil servants must still be used to buy goods on the free market.

Concerning the farmers (or fishermen and salt producers), the primary problem is the relative value between the purchase price of agricultural products and the sales price of industrial goods. During more than the past 20 years, agricultural goods prices have increased about 2.5 times but basic industrial goods prices have not increased and the relative value is excessively reduced. It is now necessary to adjust this relative value by returning nearly to the years between 1960 and 1964, a period in which the economy and production were relatively stable, the living standards of the farmers and workers were assured with a rational difference, the national economy had an internal accumulation (about 16 to 17 percent of the national income), the state budget was basically balanced and the market and prices were stable.

/Question/ How is adjustment of wholesale prices related to retail prices?

/Answer/ Wholesale prices are a type of price applied within the national economy and improvement of the wholesale price system is aimed at:

Allowing wholesale prices of various types of products, especially production materials, to compensate for production and import expenses, to produce the necessary accumulation and to create conditions for supporting production development. Depending on the type of material, such as material to support agriculture, the state under necessary circumstances can compensate for losses.

Strengthening management and economic accounting, encouraging the use of materials in an economical and effective manner, using replacement materials and replacing imported materials with domestic materials.

Encouraging promotion of the scientific and technical revolution, increasing product quality, replacing equipment and machinery, etc.

One of the important principles presented while establishing a new wholesale price system is to assure that the state's new directive retail price system is not changed, creating a complex adverse effect on all other price systems.

The Council of Ministers has assigned responsibility to ministries and local government echelons for leading primary level production and business units in actively striving to reduce production costs and circulation expenses in order that with the new directed retail prices, the new wholesale prices will generally compensate for expenses and produce an accumulation. Under cases in which efforts have been made in many methods but losses still occur, the business agency must formulate plans suggesting that the state examine loss compensation. Therefore, regardless of the circumstances, first of all, the new retail prices cannot be changes without a decision from the Council of Ministers.

A problem requiring special concern here is to strengthen management, increase labor productivity and reduce production costs on the basis of well-achieving a system of conservation in production and business. The establishment and satisfactory achievement of economic and technical norms in material, labor and capital waste right in the primary level production unit is an extremely urgent requirement at the present time. Experience has indicated that wherever there is appropriate concern, it is possible to reduce a fairly high proportion of production costs.

The action of a number of primary level production and business units in adjusting wholesale prices to arbitrarily raise retail prices in excess of state-approved price levels is contrary to principle. On the free market, some merchants have taken advantage of the opportunity to raise retail prices and have not carried out the price posting system. These are erroneous actions and must be resolutely opposed.

/Question/ As we know, there are presently many cases in which the retail prices stipulated by the state are not being properly executed, creating harm to the interests of the consumer. How will this be overcome?

/Answer/ Generally speaking, sectors and local areas are striving to strictly comply with the various types of directed retail prices consisting of supply prices, new directed retail prices and commercial business prices in accordance with the spirit of decisions of the Council of Ministers. However, under conditions in which goods are scarce, the free market is still widespread, prices are unstable and uniform pricing methods have not yet been promptly implemented, the supervision of specific price types is still extremely complex and a number of shortcomings still exist. A number of cases have occurred in which the prices of goods within the purview of directed prices have been set in excess of state-improved prices and to nearly the level of market prices. This has created a harmful effect on the living standards of the laborer, especially the worker and civil servant. Therefore, the Standing Committee of the Council of Ministers has decreed: The prices in Decision 220-CP are approved prices; sectors and local areas must strictly comply with no changes made without a new decision from the Council of Ministers. When substantiating these approved prices, it is necessary to precisely follow price formation principles and assure that approved and specific prices are in harmony with each other with rational differences and no disguised price increases. Sectors and local areas which recently stipulated prices not in keeping with Decision 220-CP must make corrections. They must assure that the consumer can purchase state goods precisely in accordance with the retail prices stipulated and announced by the official echelons and agencies of the state. Business organizations guaranteed a number of rational discounts in the circulation steps can add no additional surcharges to the state retail price. If the state-directed price is still lower than the free market price, a study must be made in appropriate distribution formulas in which decision-making echelons assure that state goods are distributed to the proper consumer precisely in accordance with policy without speculation or unfair advantage.

/Question/ Price stabilization is always an important factor in stabilizing production and assuring the standard of living. Would you give us a number of opinions on the responsibility of state agencies and of every individual on what to do in assisting in this important work?

/Answer/ Prices are an integrated economic problem, extremely complex and related to all activities of the national economy. Conditions for firmly stabilizing prices are developed production, increased labor productivity and abundant quality goods to answer the requirements of society.

Under conditions of the economy at the present time while production is still difficult and the economy is still unbalanced, price stabilization is an extremely difficult and complex mission demanding the synchronized effort of all sectors and echelons and every individual aimed at the following primary objectives:

Promoting production and fully utilizing labor, arable land and explitable materials and supplies to produce much property for supplying the needs of society.

Strengthening and improving economic management, achieving conservation and assuring production with productivity, quality and efficiency.

On the basis of production development, balancing finance, banking, increased revenue, expense reduction and a balanced budget.

Carrying out good commerce; struggling to overcome every negative occurrence to concentrate the source of goods in the hands of the state; and through socialist commerce, firmly distributing goods precisely in accordance with policy to the proper recipient and resisting collusion, corruption and unfair advantage.

Strengthening market management, expanding the socialist commerce battlefield, resisting speculation, smuggling and illegal trade, well-achieving the market management systems and not arbitrarily setting prices and changing state-directed prices; and achieving the price discount system by selling goods at discount prices. Every individual has a responsibility to regularly supervise compliance with the price policies and directed prices of the state. The state applies strict disciplinary measures in cases of price discipline violation, etc.

The State Price Commission, ministries and provincial, city and special zone people's committees are assigned to set specific prices and when deciding prices, must totally weigh all production, life, political and social aspects while simultaneously following price formation principles and methods, assuring that the prices stipulated by the Council of Ministers and sectors and echelons form a system assuring unified accounting and develop the level effect of prices in economic leadership.

The State Price Commission is an agency assisting the Council of Ministers in unified management of the total retail and service charge system. We will increase inspection and supervision to promptly discover cases in which supervision or compliance are not precisely in accordance with state decisions; under necessary conditions, we can request suspension of compliance in order to report to the Council of Ministers for an appraisal and decision.

We will join sectors in studying the announcement of new directed prices in the retail and service charges set by state agencies in order to create conditions for cadres, troops, laboring people and organizations to participate in supervising compliance.

Every individual producer and consumer with the status of a socialist collective owner has the responsibility of assisting in establishing the new price system and stabilizing prices by: striving in production labor, working with productivity, quality and efficiency and actively participating in the struggle against every negative occurrence in society, especially in the state-commerce distribution system and market management to resist speculation and illegal trade.

SOC SON MARKET MANAGEMENT UNIT INSPECTS HOUSEHOLD MERCHANTS

Hanoi HANOI MOI in Vietnamese 17 Sep 81 p 1

[Article: "Ba Dinh and Soc Son Increase Market Management"]

[Excerpt] The market management unit of Soc Son Ward is still conducting regular checks on merchant households in the service industry in performance of its duty to uphold policy on pricing. When the unit arrives on site, it coordinates with the local market management team in order, with the team, to inspect, to instruct, and to deal with cases of law-breaking. Over the past month, the unit punished 526 violations. Among them were 226 cases of practicing business without registering; 186 cases of buying, selling, and transporting goods unlawfully; 83 cases of failure to post prices or selling at unposted prices.

The market management unit's inspections also uncovered nine violations that led to the arrest of trade personnel in Kim Hoa Pharmacy and Soc Son and Kim Anh sundry goods stores for illegally passing goods to merchants.

HANOI FOOD CORPORATION OFFERS TO PAY HIGH FOR PIGS

Hanoi HANOI MOI in Vietnamese 4 Sep 81 p 3

[Text] The Hanoi Food Corporation will pay high prices at State stores for pigs on the hoof.

Purchase Prices

Pigs weighing over 35 kg, but under 50 kg, will be purchased at 22 dong per kilogram.

Pigs from 50 kg to under 60 kg: 24 dong per kilogram.

From 60 to under 70 kg: 25 dong per kilogram.

From 70 to under 80 kg: 26 dong per kilogram.

Pigs weighing 80 kg or more: 27 dong per kilogram.

Place to notify that one has pigs to sell: Ngoc Ha, Chau Long, Nga Tu So, Kham Thien, Cho Mo, or Le Quy Don food store, or the office located at 10 Cao Thang Street.

The prospective seller should clearly write his name, address, and the pig's weight on a piece of paper and deposit the paper in the mailbox of one of the stores above. An employee of the store will come out to the house to arrange a time for the pig to be picked up.

DIRECTOR OF GRAIN SERVICE EXPLAINS NEW GRAIN PRICES

Hanoi HANOI MOI in Vietnamese 5 Sep 81 p 3

[Interview with the Director, Hanoi Grain Service: "What Will the New Methods for Supplying Grain Be Like?"; names of participants, date, and time not given]

[Text] A correspondent of HANOI MOI recently had the opportunity to interview the Director of the Hanoi Grain Service regarding procedures and methods of supplying grain in the near future. Following are the questions and answers.

Question: According to the new resolution of the Council of Ministers on procedures and methods of supplying goods, the State is maintaining the present supply price for grain, but there also will be a commercial price. Would you please explain this matter, Comrade?

Answer: With a view to constantly improving distribution and circulation, the Council and Ministers issued a resolution, on 20 May 1981, on procedures and methods of supplying goods for 1981. According to that resolution, the State guarantees that it will continue to supply grain at the present supply price to the following categories of people:

a) workers, State officials (including retirees, the disabled, and students in college, in the university, or in technical or vocational high school--in other words, those receiving wages and sustenance from the State);

b) fathers, mothers, spouses, or children of workers or officials (i.e., their dependents) who are no longer able to work or not yet of working age (or are going to school, or have just graduated and have not yet been placed in a job) and live with a worker or official, are completely or principally dependent on the wages of the worker or official, and are being supplied grain by the State at the supply price;

c) wounded soldiers; elderly parents, spouses, or underaged children of deceased veterans; orphans, the elderly, or the physically handicapped with nowhere to turn for support and shelter, and other persons being cared for socially in institutions administered by the State and being furnished grain by the State;

d) those to whom the revolution owes a debt, seriously wonded soldiers who have come home to be with their families; parents, spouses, or children who are survivors of deceased veterans and are too old or too young to work, have nohwere to turn for support and shelter, receive monthly support, and are being issued grain by the State at the supply price; the old and handicapped who have nowhere to turn for support and shelter, presently receive monthly support from the State, and are furnished grain.

To others who have been buying grain at the supply price for a long time, but do not belong to the category of persons qualifying for receipt of grain at the supply price, the State promises to continue to supply grain according to State procedures and standards, but at a newly prescribed price. Grain needed by agencies, enterprises, work sites and State farms, hospitals, etc., for production and operations also will be available at that price.

Question: Please tell us the reason for the price difference, Comrade.

Answer: The first observation to make is that the new prescribed price is the bottom price; it nearly exactly reflects the socialist labor costs of production and circulation of grain. Actually, workers and officials also pay those prices for grain from the State; but, because the wage system has not yet been improved, we are temporarily extending supply prices, which workers and officials consider an element of the wage system, in order to stabilize living conditions. Thus, only those living on a wage and living expenses or on monthly benefits, as described above, buy grain at supply costs, and others pay the new prescribed price. Among the latter are people engaged in handicrafts production and those raising vegetables or industrial crops in an economic relationship with the State.

Question: What assurance is there that this will not have an adverse effect on the income of people engaged in handicrafts production and of those raising vegetables or industrial crops in an economic relationship with the State?

Answer: To stabilize living conditions of the worker, the resolution of the Council of Ministers clearly stated, regarding people raising vegetables for the cities or engaged in handicrafts production, that, when the State adjusts the price of grain sales, it also adjusts purchasing prices and contract work rates accordingly. Based on calculations of the municipal agencies' contract work rates, prices paid by the State for products bought from handicrafts cooperatives and production teams and for industrial crops bought by the State from agricultural cooperatives will be adjusted up by multiples of the present price. Not only will this compensate for adjustments in grain prices; the producers will in fact make more profit. In other words, the producers will not be adversely affected.

Question: In your opinion, Comrade, what must all levels and sectors, mass organizations, and the people do to fully and precisely implement this resolution of the government?

Answer: Though all levels and sectors, mass organizations, and the people are responsible for carrying out this resolution, directly responsible are the grain sector at all government levels and those who buy grain for the State. In my opinion, there are three big jobs to be done carefully during the preparation phase as well as in the process of organizing and implementing this important resolution.

a) Concentrate propaganda work on clearly explaining to each person that the objectives of adjusting the price of grain are to accelerate production; stabilize living conditions; stabilize market prices; and, especially, stimulate the production of grain and stabilize living conditions of workers, officials, and other labor personnel. This job can be accomplished only if the government enjoys the active participation of mass organizations.

b) Correctly differentiate the category of personnel to whom grain is to be sold at the supply price, that of personnel to whom it is to be sold according to the new guidelines, and that of persons to whom it is to be sold at commercial prices. This is not the job of government at wards, districts, subwards, and villages nor is it purely the functional responsibility of the grain sector. Rather, it is primarily a responsibility of the masses. All aspects, from declaring the number of people in the household and the current standards of supply to realistically and accurately categorizing each household and each member, require active participation of mass organizations and the people, most directly in subwards, villages, and neighborhood cells.

c) Regulate the supply and business store network, preparing business operations and material conditions with a view to providing good service to the consumer as well as strictly managing the State's grain.

Under the direct guidance of the people's committees of the city, of wards, and of districts, the grain sector is preparing to promptly initiate the new supply procedures and methods, thereby contributing to an increase in production, stabilization of living conditions, stabilization of the market, and accomplishing the mission of improving goods distribution and circulation.

INCENTIVE POLICY FOR VEGETABLE PRODUCTION URGED

Hanoi HANOI MOI in Vietnamese 15 Oct 81 pp 1, 3

[Article by Minh Ha: "Problems Needing Solution in This Year's Winter-Spring Vegetable Crop"]

[Excerpts] Tu Liem District has many experiences in intensive cultivation of "high grade" vegetables. Dich Vong is the only cooperative in the entire district always taking the lead, not only in reaching the finish line ahead of schedule but, also, in helping other cooperatives. During the recent winter-spring vegetable season, Tu Liem District has strongly expanded the field cabbage area from 50 hectares (in 1979) to 100 hectares, and brought up watercress cultivation to one-half of the entire area planted in watercress in the suburban area. India mustard, bindweed, etc., are planted in great quantities and their yield is fairly high; however, district plans are not fulfilled. The main reason is that Tu Liem is still unable to manage its products. Although following the product contracting system, a number of cooperatives in the district have not fulfilled plans for supplying vegetables inasmuch as loopholes in management have led to their diversion to the free market.

In comparison with other districts, Gia Lam District has a big vegetable potential. Its tendency is to increase the vegetable area during the winter-spring season--30 more hectares of cabbage and 50 more hectares of carrot. As a result, it has overfulfilled the year's plan by about 3,000 tons, creating strong momentum for the coming year. But, owing to geographical obstacles, Gia Lam always encounters difficulties in shipping vegetables into the city. At places and times, fairly great quantities of vegetables have to be destroyed. This is a problem which the Vegetable-Flower-Fruit Corporation, as well as the district, is still unable to solve appropriately. During the first 6 months of this year, only more than 6,000 tons of vegetables--out of 12,000 tons sold by Gia Lam--reached the city.

What Needs to be Solved During this Winter-Spring Vegetable Season?

This year's winter-spring vegetable season arrived in the suburbs in a situation entirely different from that of other years. In terms of requirements, planting was slow. In general, weather was favorable at the beginning of the season; and, in spite of drought, not many young plants already planted have been lost, giving impetus to winter-spring vegetable cultivation. Favorable weather notwithstanding, sowing and planting were slow. Cooperative members worked sluggishly, displaying a wait-and-see attitude, because a number of new policies on prices and material supplies in vegetable areas have not yet been proclaimed. Some cooperatives even destroyed entire vegetable areas to plant rice or planted rice in paddy fields and vegetables outside the fields. The tendency to grow short-term vegetables is clearly visible. Delays in supplying and distributing vegetable strains caused delays in the planting schedule. Sales of turnip-cabbage seeds began in July, but the planting season ends by the end of October. As of now, cooperatives have received just 5 quintals of seeds--instead of the expected 2 tons. Only 1 ton of butter bean strains has been sold--instead of 10 tons as planned. Carrot seeds enjoyed the briskest sale with all 12 tons being sold.

Below are figures reflecting delays in production: Cabbage sowing-planing, 50 hectares behind (the planting season ended by 5 October); carrot sowing-planting, 100 hectares behind; green cabbage, about 70 hectares behind; tomatoes, just more than 10 percent of last year's area. At the end of September, Gia Lam counted only 30 hectares of field cabbage, instead of 100 hectares as planned. Delays in transportation were amplified by snags over weighing at reception centers, classifying vegetables, etc.

A look at the main vegetable species in this vegetable season shows that short-term crops are increasingly numerous but not diversified. This is contrary to Decision 16 of the Party Municipal Committee calling for ensured plan fulfillment in terms of quantity, quality, categories, and time.

So, what needs to be solved during this vegetable season? In our opinion, the important thing is policy. Recently, the Thanh Tri People's Committee issued a directive on adjusting vegetable purchasing and selling prices and on supplying materials and grain to vegetable growers. This directive should be promptly disseminated into basic installations so that the people can produce with confidence. The new policy will be a lever for stepping up production. And all of this will come true if guidance is resolute and well oriented and if a propaganda effort is conducted to urge cooperative members to show strict compliance.

MEKONG RIVER DELTA AGRICULTURAL DEVELOPMENT ENCOUNTERING DIFFICULTIES

Hanoi NHAN DAN in Vietnamese 26 Oct 81 p 2

/Article by Huu Tho: "The Mekong River Delta in 1981"/

/Excerpts/ The farmers in the Mekong River Delta to the present time are still primarily individual farmers. Cooperatives and production collectives account for only 7 percent of the area and 9 percent of the families while transitional organization forms are not yet expanded. Slowly implemented agricultural cooperativization will divide the classes in the rural area and fail to open the way for rapidly introducing technical advancements to production. The coordination process between transformation and construction is producing many theoretical and practical problems such as: how should planning be conducted? How should technical advances be introduced to production? How should lever policies be applied?

Advances and Difficulties

Those with the opportunity to visit this area since the day of liberation see clear advances in agricultural production. Although capital construction investment is not great but restricted and floods, insects and the southwestern border war have created obstacles, achievements have been made in all three aspects of intensive cultivation, multicropping and land clearing. A crop structure consistent with each area is beginning to be defined with little of the previous "leopard-spotted distribution." An agricultural material and technical base system is beginning to form. Multicropping is conducted on 38 percent of the annual rice growing area. Rice output has increased by 14 percent over 1976, a bumper crop year.

Beginning the 1980's, the weather is unfavorable and materials are scarce but rice output according to estimates can equal that of 1980, a bumper crop year. Industrial crops, especially soybeans, have found a proper place, do not compete with rice land and have increased 3.4 times over last year. The number of domestic animals has increased. The marketing and grasp of agricultural goods sources after a period of difficulty have for more than a year clearly changed. By September of this year, 81.9 percent of the grain level for the entire year has been mobilized, handicrafts had achieved 151 percent of the planned level, live-weight pork had achieved 67.2 percent and soybeans achieved 2.28 times over the same period last year. The state is purchasing much more beans, peanuts, eggs, chickens, ducks, tobacco, etc. The total value of agricultural products and food purchased by the Ministry of Home Trade since the beginning of this year in this area is equal to 3.37 times the same period last year, not counting price increase factors. It is clear that fairly good changes have been made in the production, distribution and circulation aspects.

However, those engaged in planning and calculating the balance nationwide are not satisfied with these figures. If compared with plans, there are many aspects not answering requirements and some worthy of concern. Rice output is only equal to last year, that is a few hundred thousand tons less than the planned level. Susidiary food crops have achieved low levels and are developing slowly. Industrial crops have primarily achieved only low levels; even soybeans although strongly developing have only achieved 70 percent of the annual planned level.

What is the reason for this situation?

A factor easy to see is that the weather this year has been unfavorable. At the beginning of of the winter-spring season, the water receded nearly 1 month late compared with the same period last year and during the best period for sowing and transplanting, the water levels were high. During the summer-fall season, serious drought occurred in the coastal area at the beginning of the season, the floods arrived early, the Ba Chang drought occurred 1 month early and the hot dry period was prolonged. The early tenth-month rice and tenth-month rice seedlings were affected by serious drought while the Tien and Hau rivers rose 45 days early and some tenth-month rice area was flooded. It is increasingly recognized that the favorable aspects of natural conditions in the Mekong River Delta have only a relative significance. A meteorologist evaluating the natural conditions of this area with agricultural production requirements chose these words to tell us, "Comparing the favorable and difficult factors, the favorable aspects are much greater for tropical crops." While the material and technical base still has insufficient strength to limit the harsh conditions of the climate, difficulties must always be calculated when supervising production and formulating plans.

But what about the subjective factors? Many locations complain that material supply does not assure planning, causing the local area and primary level units to be passive. In agricultural production development in the Mekong River Delta area, a major ideology mentioned since March 1981 is to, "develop the spirit of self-reliance of the people and of each local area at the highest level in order to overcome the overall difficulties of the entire nation, first of all difficulties in capital, materials, fuel and equipment." However, this is not to neglect the responsibility of all sectors and the entire nation to this key area. Many sectors have not carried out the plan and along with the objective difficulties have had many subjective shortcomings. By August of this year, only 47.3 percent of chemical fertilizer in the annual plan had been supplied and a factor worthy of attention is that this supply was not in keeping with the season. In February, the winter-spring rice fertilization period had ended but only 28.5 percent of the required level for the entire season had been issued. As we write this article, harvest of the summer-fall rice has ended and the tenth-month rice fertilization period has nearly ended but only one-third of the planned level of nitrate fertilizer has been issued. Phosphate is a type of fertilizer extremely needed in the Mekong River Delta and someone said that "only spread phosphate in the fields and yields are assured" but only 30 percent of the planned level has been issued. It is possible to relate many of these situations. The material and capital balance is a common difficulty of the entire nation. However, clearly transportation is mentioned by many as a key factor creating obstacles to production development. Without synchronized implementation, the expansion of agricultural production with the desired rhythm is impossible--this is the complaint and also the paramount concern of many.

Once again, it is necessary to recognize the difficulties in the program for exploiting the Mekong River Delta in accordance with a new concept right from the very first year of the third 5-year plan.

INADEQUATE DISTRIBUTION OF FERTILIZER, INSECTICIDE DISCUSSED

Hanoi HANOI MOI in Vietnamese 15 Oct 81 p 3

[Article: "Straighten Out the Material Supplies Mess"]

[Text] In this short newspaper article, the writer will not relate [all that took place at] the conference recently held by the Agricultural Service on straightening out the material supplies mess. The main issue raised here is how to supply materials speedily, conveniently, and on time. In a narrow sense, material supplies include nitrate fertilizer, insecticide and spraying tanks, which cooperatives now urgently need. These are materials for which Hanoi depends entirely on the central echelon to supply and they are usually unavailable or come late or not in keeping with plans. But when materials are available, the problem which should be discussed is how to make them available, especially to seed producing areas.

The principal task of the Crop Seeds Corporation is to produce and purchase each year from 1,000 to 1,200 tons of seed rice and from 110 to 118 tons of vegetable seeds. With the 34 cooperatives that agree to produce the above amount of seeds, the corporation must sign contracts to supply them in reciprocity with from 170 to 180 tons of nitrate fertilizer and with more than 5 tons of insecticide. These contracts notwithstanding, the corporation carries none of these supplies, which come entirely from the Agricultural Supply Corporation of the Agricultural Service. To ensure planing on schedule, the Crop Seeds Corporation regularly sends official letters to the Agricultural Service, asking it to supply nitrate fertilizer three times a year, so that the corporation can settle debts of the previous planting season and, at the same time, make a temporary and partial advanced contribution to the following season. But usually these requests are not met in full because nitrate fertilizer arrives late and irregularly. And that is just one of many reasons. Let's look into a number of other problems. First of all, it must be affirmed that the amount of material supplies going to seed production is not very large. The city plan invests annually more than 18,000 tons of nitrate fertilizer in crops, of which only 1 percent is for seeds (180 tons), 5 percent for insecticide, and 3 percent for spraying tanks. Although it takes a tiny percentage, investment in seed production is usually not given due attention. For instance, this past January in the recent nitrate fertilizer supply phase, the Crop Seeds Corporation sent an official letter, requesting 61 tons for seed producing areas in the four old districts. The Agricultural Supply Corporation also sent an official letter down to district supply stations, asking them to supply nitrate fertilizer to seed producing cooperatives. But the corporation did not know whether or not these 61 tons of nitrate fertilizer were sent to seed producing basic installations, because, thinking that such an official letter was enough, they investigated no further. This is a way of doing things from which experiences should be drawn.

Second, the relationships between the Agricultural Service and districts as well as cooperatives, and their ways of doing things still have unmistakable difficulties. For instance, in Dong Anh District, the planning committee manages nitrate fertilizer, instead of the agricultural committee. A vice chairman of the district agricultural committee said that the Agricultural Service has not concretely guided the plan for supplying nitrate fertilizer for vegetables and seeds. In consequence, the district itself must ensure a balanced supply of materials to seed producing areas. The important thing is that plans for supplying nitrate fertilizer must be clear and specific for each target, be it vegetables, seeds, rice, etc. Only in this way can we distinguish which targets have received enough fertilizer and which targets are still short. And also owing to the above mentioned snag. Thanh Tri District has not received the Agricultural Service's plan for distributing nitrate fertilizer. After receiving 1,900 tons of nitrate fertilizer--but not the plan for distribution to individual recipients--the district agricultural committee, on its own initiative, supplied 6 tons to Dong My Cooperative, clearly mentioning in writing that the allocation has been set aside for seed production. In spite of not having received a plan, the district agricultural committee has set technical parameters on the basis of having 1,900 tons of nitrate fertilizer. For instance, 1 kg of vegetable seeds receives an allocation of 8 kg of sulfate-nitrate fertilizer. Establishing a rationally set parameter serves as regulatory norms for cooperatives to follow. At the above meeting, the use of nitrate fertilizer in cooperatives was not discussed; nevertheless, the issue is raised here to remind cooperatives of the need for strict compliance. In general, cooperatives still use nitrate fertilizer in an unrestrained and makeshift manner, not yet concentrating on important points or supporting their main tasks. A cooperative received nitrate fertilizer for seed rice production (50 hectares), but has not used it up. Or a cooperative has been supplied nitrate fertilizer for producing vegetable seeds but used it to produce rice, etc.

Clearly, this way of doing things and of using material supplies, as we have seen, will lead to more serious shortages of supplies. So, what should be done to straighten out that mess, allowing material supplies to be promptly and conveniently supplied? Participants in the conference have proposed many remedial measures, and finally one of these was adopted: The Agricultural Service planning bureau will draw up plans for each different category of materials by area and time period, in accordance with specific norms. The districts must adhere to these plans; and, on that basis, the Agricultural Supply Corporation will distribute supplies to district supply stations (Supply Provision Enterprise) under the supervision of the district Agricultural Committee.

Norms for supplies for each category and each time period should be strictly achieved. The Rice Corporation and the district Agricultural Committee should see to it that materials be rationally supplied to seed producing areas.

All of this is just a first step; nevertheless, it reflects a concentrated and unified way of doing things, causing conditions for unceasingly improving management, control, and supervision.

POLICY FORBIDS PRIVATE USE OF ELECTRIC POWER TO MAKE ICE

Hanoi HANOI MOI in Vietnamese 22 Sep 81 p 4

[Article: "The Electric Power Service Makes and Announcement']

[Excerpt] Scarce sources of electric power are presently inadequate for industrial and agricultural production and the minimum needs of daily life. At the direction of the Ministry of Electric Power and of Electric Power Corporation 1, the policy is not to supply electricity to any individual, collective, school, enterprise, cooperative, etc., for use in producing ice cream or ice. Electricity is only supplied for the production of ice or ice cream to specialized production installations of the State. The Hanoi Electric Power Service will conduct investigations and treat violations according to regulation.

LIGHT INDUSTRY

MASSIVE RESIGNATION OF TECHNICAL WORKERS FROM COOPERATIVES

Hanoi HANOI MOI in Vietnamese 5 Oct 81 p 3

[Article by Minh Hoang: "Things Must Not be Allowed to Drift in Handicraft, Small Industry Production Installations"]

[Text] In recent days, in the face of difficulties in production and living conditions, good examples have been set by hundreds of cooperatives and tens of thousands of cadres, party and cooperative members who know how to develop the spirit of collective ownership and self-reliance, to initiate changes in business orientations, and to maintain and develop production. However, we cannot help but think about quite a few members of collection production installations who, tempted by personal gains, have allowed production to stall and have left the collective for outside personal work or lucrative trade. At the H.T. pottery cooperative (Gia Lam), more than 40 cadres and cooperative members have applied for resignation from the cooperative after building 40 kilns at home and getting well prepared for private business.

The "dropping out" of technical workers, especially the most skilled ones, has become beyond doubt a widespread negative phenomenon in cooperatives.

As everyone knows, promotion of handicraft industry requires, first of all, proper organization and guidance. For the entire sector to properly carry out recently proclaimed party and state policies, concentrate on stepping up production, and concretely contribute to improving distribution and circulation, and to struggling to stabilize market prices, we believe that the task of consolidating cooperatives must now be considered the most pressing one and that we must not belittle political and ideological education nor allow the positive task of organization and guidance to drift.

WIDESPREAD BRIBERY, THEFT AT HAIPHONG PORT REPORTED

Hanoi LAO DONG in Vietnamese 8 Oct 81 p 3, 6

[Article by Thai Thuyen: "Negative Phenomena in Loading, Unloading, Delivering and Receiving Goods at Haiphong Port"]

[Text] In recent days, while grain continued to pile up as usual in Haiphong Port warehouses, Hanoi and a number of other provinces have not had enough grain for timely distribution to cadres, workers, civil servants and the people. Why that contradiction?

A fact which is evident to everyone is that transportation has stalled. To analyze the causes of that stagnancy, first of all we should see how people work at two work centers--loading and unloading at the port, and receiving goods at warehouses and grain stores.

On the morning of 17 July 1981, when we arrived at Vat Cach Port we saw 12 trucks from Goods Transportation Enterprises 4, 6 and 20 lined up outside the warehouse gate. The time was 0840 hours. The drivers told us that although most of them had been there since 0630 hours, they still were hesitating, not yet ready to drive up their trucks alongside the loading rack, because longshoremen had demanded excessive bribe money--35 dong for flatbeds and 50 dong for trailer trucks.

Later, we proceeded to the main harbor, just in time to see 2 trucks from Goods Transportation Enterprise 6 leaving warehouse 13. Wondering why these trucks were empty, we asked driver Le Ngoc Lan who said, "Enterprise 6 sent 7 trucks here to pick up sugar, but after we pulled them in the loading workers demanded bribe money--50 dong for flatbeds and 70 dong for trailers. Because of such a 'high price,' we must now go home with empty trucks to report to the vehicle dispatch station."

We then entered the warehouse where we saw 5 trucks still waiting in line while loading workers were seated shooting the breeze. We asked the warehouse custodian, a woman, "Why did these two trucks pull our instead of hauling sugar?"

She nonchalantly replied, "They refused sacks that were not full and wet sugar!"

"Do you have full sacks and dry sugar here?"

"We do."

"Why didn't you give them full sacks and dry sugar?"

"That's something the drivers must discuss with loading personnel."

"Is it true that 'discuss' means giving them a tip?"

"I don't know."

We then decided to interview some loading workers, but they steered clear of us.

Adding evidence to this fact, leading cadres of the Haiphone Grain Receipt and Deliver Corporation gave us the following data: At the end of April 1981, 30,000 tons of grain were held up at Haiphong Port; but a great many trucks sent there were unable to pick-up the grain because drivers had no bribe money for loading workers.

It can be said that demanding bribe for loading and unloading at Haiphong Port takes place at its warehouses and loading racks on a widespread and regular basis. Haiphong Port leading cadres are striving to devise effective measures by strengthening management and consolidating the organization so as to gradually overcome these negative phenomena, and are doing their utmost to unceasingly boost loading and unloading capabilities.

We think that it is necessary to study ways to rationally improve both policy and procedures toward loading workers in order to create a basis for altering the work pattern at Haiphong Port.

The routine of weighing, measuring, delivering and receiving goods at warehouses, grain stations and stores does cry out for review. First of all, there is an irrationality which has persisted for years--at pickup points, goods are delivered in sacks, but at receiving points, they are delivered in kilos, instead.

To illustrate this, we cite below some data provided by Goods Transportation Enterprise 4: In the second quarter of 1981, grain wastes and losses during transportation at this enterprise ran to 25,437 kg. Of this amount, the drivers were charged for 4,652 kg, however, records on reception of goods at warehouses and stores attributed responsibility for the remainder--20,787 kg--to no one; in other words, the drivers did not have to pay, the owners of these means of transportation (Transportation Enterprise) did not have to pay either, and Haiphong Port was not held responsible for the losses. As a result, the state must stand the loss of 20,785 kg of grain. After looking closely into the case, we could not help raising this question, "In fact, were these wastes and losses true as recorded?"

Data, documentary evidence and records on goods quality control show the following:

From 2 July 1981 through 7 July 1981, Goods Transportation Enterprise 4 sent 34 trucks to haul grain from Haiphong Port to the Hanoi Grain Service. Of this fleet, 20 trucks delivered grain to Doc La warehouse in Yen Vien; 8 trucks delivered to the Sai Dong bakery and 6 trucks delivered to Xuan Quang store. Each of the above places used its own weighing and measuring method. Doc La warehouse weighed a 15 percent sample, the Sai Dong bakery weighed a 30 percent sample. Xuan Quang store weighed the entire shipment.

Use of partial weighing to check the total weight of a shipment is just an estimate. This way of calculating was practied during the war owing to lack of conditions for accurate weighing and measuring. But it is now irrational to persist in using it. It can be said that this is an arbitrary way of doing business--a way that created loopholes in management work. In addition to methods of weighing and measuring while delivering and receiving goods, the way with which records confirming the quality of goods were written also raised doubts. For instance, of 20 records confirming the quality of goods at Doc La warehouse, 14 were entirely identical in terms of wording, "Sample weighing, 15 percent, each sack is .7 kg underweight, multiplied by 150 sacks, the entire shipment is 75 kg underweight. Sacks are intact."

All records on confirming the quality of goods included the names of drivers, warehouse custodians and representatives of loading workers.

At the Sai Dong bakery, of 8 records on confirming the quality of goods as many as 5 were entirely identical, "Sample weighing, 30 percent; on the average each sack is 1.1 kg underweight, multiplied by 150 sacks, the entire shipment is 165 kg underweight. Sacks are intact."

The above notation incited us to raise another question, "Why did losses differ strangely from one truck to another? More strange is that despite the losses "sacks are intact"! This way of writing records clearly amounted to holding no one responsible for the losses and to leaving the state holding the bag! We have also learned that while delivering goods the drivers are much concerned about being held responsible for losses by warehouse custodians. If the records say that sacks are torn, or sewing threads are broken, etc., the drivers must make up any loss. That is why while delivering goods drivers pay most attention to attribution of responsibilities, and simply ignore the size of the losses. The reason is that, in fact, misdeeds committed by some drivers--slitting sacks open to steal rice and noodle--are passed up by warehouse custodians with the assertion, "Sacks are intact!" (sic!).

Now, we raise another hypothesis: If the losses do not really take place as recorded, who stands to gain from the surplus? The Warehouse custodians, of course!

The bad practice of demanding bribe while loading and unloading has had a sizable impact on transportation. Arbitrary weighing and measuring while delivering and receiving goods has contributed to considerable losses of state grain.

We hope that responsible organs clearly see negative phenomena at the two main components of the grain transportation system, so as to promptly take the most effective steps to gradually eliminate the old work pattern, create a new one, and strive to unceasingly increase loading, unloading and transportation capabilities.

NATURE OF OBJECTIVE MILITARY LAWS DISCUSSED

Hanoi TAP CHI QUAN DOI NHAN DAN in Vietnamese No 9, Sep 81 pp 41-49

[Excerpt from speech by Lieutenant General Hoang Minh Thao at a conference on military methodology organized by the Editorial Board of TAP CHI QUAN DOI NHAN DAN: "Objective Military Laws: the Conditions of Their Existence and the Subjective Efforts of the Commanders"]

[Text] Military science has the functions of understanding the nature and laws of war, national defense, and the army; understanding the conditions of their existence and operation; and on that basis setting forth the operational principles and methods, developing those principles and methods into an art, and contributing to guiding war in correct accordance with its laws and winning victory. Understanding the objective military laws and the conditions for the existence and operation of those objective laws, in order to transform things and phenomena in accordance with our subjective desires, is a very important matter that is not simple. That is also a matter of understanding (and resolving) the relationship between objective laws and subjective dynamism, and achieving the unification of objectivity and subjectivity on the basis of grasping laws and the conditions of the existence and operation of those laws.

Since I have not had the opportunity to prepare carefully, I will only contribute a few main ideas regarding the comprehension of the specific conditions, including military things and phenomena, which operate in accordance with certain laws, in order to, on that basis, transform and change the specific conditions, so that military things and phenomena operate in accordance with the desires of the commanders and in order to win victory in development and combat.

As everyone knows, things operate in accordance with laws and under the specific conditions of their existence, in a certain space and time. Therefore, after comprehending the operational laws of things, man, with his subjective dynamism, can further or hold back the development of things by affecting the conditions of their existence. Only thereby can man hold back or improve the world for his benefit. The operational laws and conditions of things result from many combine factors, so there are coinciding and conflicting relationships, and there are unities and contradictions. Marxist methodology requires, and assists, us to comprehend the laws and their conditions of existence, and to find methods to resolve the contradictions and cause things to operate in accordance with objective laws, to our benefit. There have been many examples of that, both in the past and in the present, and in the economic, military, and other spheres. We have also seen that in the economic sphere, our failure to carry out certain tasks well during the recent period was due, from the point of view of methodology, to failure to clearly comprehend the economic laws and the specific conditions of their existence, failure to clearly realize the objective and subjective conditions, and failure to resolve the contradictions in order to unify the objective and the subjective.

We may offer historical proof in the military sphere. How did Nguyen Trai view and apply the conditions for the existence of things? He paid much attention to the objective and subjective conditions for the existence and development of things. He said, "we must know ourselves and others, and when to be hard and when to be soft." Thus he had correct, very dialectical methodology. He believed that there must be certain conditions for things to arise and develop according to laws. For example, "when weak forces attack strong forces they should launch surprise attacks; when there are few of us and many of the enemy we must often use ambushes" shows correct comprehension of the strengths and weaknesses of theenemy and of ourselves, and appropriate organization of combat activities in order to create and develop the objective and subjective conditions for winning victory. Those conditions are space and time. "When weak forces attack strong forces, often launch surprise attacks" is a method of fighting that utilizes the factor of time. "When there are few of us and many of the enemy, often use ambushes" is essentially a fighting method that utilizes the factor of space. Furthermore, it is necessary to realize the unity of the conditions of space and time. The concept of time is related to the concept of space and vice versa.

Nguyen Trai also delineated the relatively independent nature of the concepts of space and time, so that it would be necessary to deal with both aspects. He often said, "having both time and space transforms loss into gain; without time and space, safety becomes danger in an instant." For example, when we use sappers to attack the enemy we can use few to attack many. That is principally utilizing time. Or if we set an ambush at a pass or on a mountain top, one of our squads can rout an enemy company. That is essentially making use of space. Thus the laws of winning victory are put into operation.

Nguyen Trai said, "defeating few with many is ordinary," i.e. that is something everyone knows is an ordinary law. But he also dared bring forth an entirely opposite law -- "using weakness to fight strength and few to defeat many " -- a very severe law which he thought would not become a law. But that law has appeared many times in the course of the wars to liberate and defend the Vietnamese homeland, in ancient times, in the middle ages, and even in the modern era.

Things are created by many factors. Therefore, in guiding war, in guiding development and training, etc., first of all we must realize that there are many factors at work. Those factors are material and spiritual, space and time, position and strength, time and position, capability and art, the nation and the era, etc. Among those factors, real strength is the basic material condition, one with a decisive, permanent nature, of the operation and development of things. But from the point of view of that real strength, it must be realized where and how it exists and operates, and the specific space and time in which it operates. It also operates by means of the influence of man, in accordance with the guidance of man, and we must not allow it to operate spontaneously. Therefore, things result from many factors and conditions which affect one another. Among them, the subjective dynamism of man plays a very important, decisive role.

Today, in order to clearly understand that the Chinese aggressors are numerous but are not strong, and that we are capable of defeating them, we must have correct methodology. We must have accurate, specific knowledge of them. As everyone knows, they still emphasize the infantry, in combination with their air force and navy. The Chinese army travels principally by land, i.e. move by motorized vehicles, on foot, on mules and horses, and by nonmotorized facilities. They must travel in that way because that is their actual capability and is their forte and tradition. If,in the future, they develop along the lines of modernization, they may travel more by other means. If they wage a war of aggression against our country and we defeat their infantry, then although the law of "the superiority of large forces" will operate it cannot develop because we restrict and limit it. But how can we defeat their large army? If we are to do so, we must wage people's war and create a strong, flexible people's war battlefield position. Without people's war we cannot defeat a large army.

In our Vietnamese people's war the entire population achieves mastery and attacks, combining the various fighting modes and methods. That is the common guidance thought and principle. People's war must today develop to a higher degree than during the wars against France and the U.S. We cannot be satisfied with only the old experiences: if we say and do as we did in the past, we cannot win. Specifically, today we must make good preparations in advance with regard to many aspects -- political, military, economic, and social, and forces, battlefield positions, and fighting methods. On that basis, in combination with clever fighting methods we can prevent the Chinese army, although large, from fully developing its strengths and strong points. Ultimately, it will be defeated by our soldiers and troops. One of the principal contradictions between ourselves and the enemy is that there are many of the enemy and few of us. "Many" and "few" apply only to the regular armies: the Chinese troops cannot outnumber our people. Furthermore, our people are united as one, are steadfast, resolute, and determined to fight and win, have much experience in fighting aggression, have strategic skill, and have people's war that has developed under the conditions of our country undergoing changes and advancing. Thus we can resolve that contradiction by means of highly developing people's war in order to create greater fighting strength than that of the enemy. We have truly broad and strong people's war and know how to divide and disperse the enemy, while the enemy, although numerous, are spread thin. We make use of war-waging modes, fighting methods, etc., which are closely combined. That is a very high military art with a very scientific methodological basis.

We must comprehend the enemy and ourselves -- the strength, position, and fighting methods, the material and morale matters, the present and future, etc., of both sides -- which is comprehension of the objective conditions. Then we must combine that comprehension with the development to a high degree of our subjective dynamism and the setting forth of principles and methods, as mentioned above. That is scientific, revolutionary, correct, and sharp methodology. We must know the laws, and the conditions of their existence and operation, of the enemy and of ourselves; i.e., we must grasp the necessary objective and subjective conditions and know how to forsee their developmental tendencies. On that basis, we must develop the subjective dynamism and find appropriate modes for winning victory. If not, the results will of course be completely contrary.

Even when evaluating the comparison of forces between ourselves and the enemy, in order to determine the specific situations of the forces of the two sides and their specific operational laws, in order to have appropriate policies and measures, in addition to the other requirements we must have a scientific, accurate methodology. We may give as an example Tran Hung Dao. Why, when the Mongol-Yuan troops invaded our country, did Tran Hung Dao abandon Thang Long and withdraw his troops to Ninh Binh, Thanh Hoa, Thai Binh, and Quang Yen? Was that a strategic retreat? I don't think so! Tran Hung Dao evaluated the specific comparison of forces between the enemies and ourselves at that time, and studied the enemy's operational laws and our capabilities, in order to find appropriate fighting methods. His fighting method at that time was based on the thought "fight the long with the short, fight fatigue with rest." Therefore, when fighting the Mongol-Yuan troops he adopted the policy of preserving his forces and taking the initiative in rationally moving his strategic forces, deploying an effective strategic position, using a strategic fighting method which the enemy could not forsee, and gradually force the enemy into a passive position. That was a matter of using strategic forces and deploying a strategic battlefield position.

Under the conditions of that specific comparison of forces and the above-mentioned guidance thought, Tran Hung Dao did not strike the hard with the hard or match the enemy one-for-one. If he had done so, it would have been difficult to defeat the Mongol-Yuan troops. He sought all ways to eliminate the enemy's strengths. The wanted to attack swiftly, but we prevented them from doing so. They wanted to fight on a big scale from the very beginning, but we would not allow them to. His battlefield position and fighting method resulted in the enemy becoming cut off and dispersed, tired and weakened, and fatigued, in order to defeat them. That was a fighting method which enabled subjective capabilities to match objective reality; i.e., it was based on the specific conditions which were correctly overcome by correct methods. Thus within a few months the Tran soldiers and people defeated the Mongol-Yuan troops.

That was an active, mobile strategic fighting method which was very appropriate for the objective and subjective conditions; and which was appropriate for the laws and conditions. It was not a strategic retreat or strategic passivity. If he had been passive strategically he would have beeen in a confused position, would have easily been smashed, and could not have won complete victory in a major war within a few months. Therefore, we may affirm that in addition to other reasons, at that time Tran Hung Dao had correct methodology, which means that he knew how to "use the short to defeat the long and rest to defeat fatigue."

To speak of the Central Highlands Campaign in the spring of 1975 is also to speak of objective and subjective matters, of laws and conditions. On the battlefield, our forces and those of the enemy, but if the enemy were able to send their strategic general reserves their forces could equal, or be greater than, ours. We had to prevent the enemy from changing that comparison of forces. As for the enemy's operational laws, if their bases in the Central Highlands were to continue to exist they had to hold the lowlands to serve as the strategic rear area. With regard to military geography, the Central Highlands were a jungles-and-mountains region easily separated from the lowlands. The Central Highlands were connected with the lowlands by means of two main roads, routes 19 and 21. Other than those two roads, movement would have to be by air. At that time, the puppet army had very few airplanes, so its air transport capability was very limited. Therefore, when the Central Highlands were attacked the enemy had to send reinforcements and supplies mainly by land. The laws of operational activity are determined by the objective and subjective conditions. We also know in the past, every time we fought the enemy, if their on-the-spot forces could not cope with us they could be reinforced, for they still had considerable reserve forces. That was the enemy's normal operational law. So what did we have to do subjectively in order to be appropriate to the objective conditions? This time, we had to prevent the enemy from acting in accordance with their usual law, but enable our combat activities to be carried out in accordance with our victory-winning laws.

If that were to be accomplished, first of all we had to cut route 19 and 21, while also interdicting the airfields. But that would not be sufficient. In order to cut the enemy's ties between the Central Highlands and the lowlands, and strike them with a terrible psychological blow that would make them afraid of being surrounded and wiped out, as at Dien Bien Phu, it was essential that we prevent the enemy troops in the lowland area from reinforcing the Central Highlands. Thus we had the 2nd Corps and 1st Corps in the Tri Thien Hue-Ben Hai bridge area remain in place and carry out positive diversions, along with forces of Military Region 5, to pin down the enemy's airborne division and marine division in the north. It was also necessary that 4th Corps be active in order to occupy the enemy forces in the Saigon-Bien Hoa area so that they would not dare abandon their positions and go to reignforce the Central Highlands. If we had not been able to cut the roads in the Central Highlands or pin down the enemy in the Hue-Da Nang and Saigon-Bien Hoa area, the enemy troops in the Central Highlands could not have been routed so quickly.

Because we clearly and accurately understood that the laws of winning victory would operate in such a manner, at the very beginning we resolutely concentrated all of the 3rd Division (Military Region 5) to interdict Route 19 (it temporarily suspended its mission of attacking the enemy's pacification plan), while also concentrating all local forces of Phu Yen Province in the area of Route 7 to attack the enemy troops in the Central Highlands when they were evacuating. We did not spread out our forces but concentrated them on the most important objectives. If those key objectives could be attained, the other objectives could also be attained. If we spread out our forces, we could attain none of the objectives and everything would be half-done. That became evident in the course of the anti-U.S. war, especially during its victorious concluding phase. Only by striking decisive blows and annihilating large numbers of the enemy could we win the war. That was possible because we knew the operational laws of the war.

Methodology demands that we find the principal contradictions of things and phenomena. Then, on the basis of the actual conditions and capabilities we must determine the best methods and measures and concentrate forces to resolve those contradictions, in order to guide the things and phenomena in accordance with our subjective intentions. The basic, permanent, and essential contradiction in previous resistance wars between ourselves and the enemy was that the enemy were superior to us with regard to weapons, ammunition, POL, and mobility (in general, with regard to material conditions). In the Central Highlands we had to resolve that contradiction by isolating the enemy from their strategic rear area and cutting them off from their sources of supply. We knew that a law of the puppet army was that it wasted resources in order to live; one of its conditions was that it had to have a large volume of materiel in order to exist. Without plentiful material forces, it could not live. If they could only fire a few hundred shells a day, the puppet troops could not fight. Every day they had to fire thousands and tens of thousands of shells a day, and they had to be supported by sufficient airplanes, tanks, POL, and the other facilities. And only if they ate a good deal could they continue to exist. Therefore, in order to defeat the enemy in the Central Highlands we had to resolve that contradiction -- the contradiction of the enemy being superior to us with regard to material conditions -- by cutting the Central Highlands off from the lowlands and not allowing them to live by means of their plentiful material supplies in the lowlands.

In all ordinary tasks, correct methodology demands that we always examine conditions objectively and scientifically before making a decision. Objectives should be appropriate to the material conditions. Policies, plans, objectives, and missions must also be based on the specific objective and subjective conditions so that they can be appropriate. We cannot exceed those objective conditions. Furthermore, we must develop subjective dynamism to the highest degree in order to attain the greatest effectiveness allowed by the objective conditions. In many places, the norms that are set are usually too high and are not appropriate to the objective conditions. But in attaining those norms they do not fully exploit subjective dy dynamism. That is contrary to laws.

The same is true with regard to the training in our Institute. Our Military Institute has the mission of training and supplementing cadres. The quantitative and qualitative norms for the training and supplementation of cadres cannot depend on subjective, arbitrary desires. We must carefully and scientifically calculate the specific conditions. The norms should be based on the actual capabilities for attaining them, and then gradually raised. They should not be set too high, for if they are they usually cannot be attained, or if they are attained quantitatively they are not attained qualitatively, which in turn affects many other aspects of the school, such as limiting the results of the training of instructors, the waste of time and effort, etc. The actual situation demonstrates that if there are good conditions (instructors, curricula, text materials, equipment, dining, housing, and service facilities, etc.), the study time can be shortened while still attaining high quality. If we do not carefully calculate the conditions and want to accomplish more than capabilities allow, then even if the supplemental and basic training classes are longer they cannot attain higher quality. And because the instructors will have little time to study and train they will gradually become "dull" and ultimately the quality of training will be very deficient.

The experiences of a number of other schools also clearly demonstrate that fact. Therefore, in training it is also necessary to calculate the conditions and carefully weigh the various aspects if it is to be carried out well.

Plans must be appropriate to the objective conditions and must be balanced and complete, but actions and measures must surpass the material conditions. That is the subjective role of man with regard to the objective conditions. The same is true with regard to the principles of using few to defeat many, using the small to defeat the large, and using half one's strength to achieve twice the merit. We must have good skills, know how to use space and time, know how to create good positions and opportunities, and thus know the laws, conditions, and balanced nature of things, know how to unify the objective and the subjective, and resolve the contradictions in the relationships among things. Armed struggle is an all-round, very fierce s struggle between two social blocs and their material forces; it is also a very fierce struggle between two wills. That struggle is very lively and urgent. The situation changes often and rapidly, in a very complicated, sudden manner, and many things may not be forseen, for the two forces are alive and in opposition to each other. Therefore, we must forsee many situations, especially those that are complicated and difficult. When thinking of those situations, it is of course necessary to have ways to deal with them. It is also necessary to know how to select, filter, and limit the situation, for only thereby can we take the initiative. That is also a matter of methodology in armed struggle. If the commander wants to take the initiative he must forsee many complicated situations, but he must also go all-out to use many methods to prevent excessively complicated situations from occurring, or to limit them. They must forsee and predict how many situations will arise, and how many of them will be complicated, and forsee the optimal methods for resolving each of those situations. That is a matter of the art of command. If the situations are forseen, even the complicated ones, but many complicated situations are allowed to occur, which result in the loss of much effort, the attrition of many forces, and the waste of much time in the fulfillment of missions, then the command art is not yet high.

During the Central Highlands campaign of the spring of 1975, we foresaw that the most complicated situation would be that the enemy would move their general reserve forces, which were stationed in the lowlands, to reinforce the Central Highlands, such as the airborne and marine divisions in the Tri Thien Hue-Da Nang area; the 18th Division and a number of Ranger Groups in the Saigon-Bien Hoa areas; and the 22nd Division in the Binh Dinh-Nha Trang-Cam Ranh-Quy Nhon area. That was the most complicated situation. If the enemy could move in those forces they could change the comparison of forces on the battlefield to our disadvantage, and we would have a difficult time fighting them. The second complicated situation would occur if, when we attacked Buon Me Thuot, the enemy's main regular forces concentrated in Play-Cu were sent down to reinforce Buon Me Thuot, which would create additional difficulties for us. Furthermore, we would have to be on guard against the U.S. imperialists returning -- by means of their air force -- although they were encountering many difficulties and were confused. So we also had to be prepared to cope with the U.S. Air Force (there was little likelihood that that situation would occur, but in war such a possibility cannot be ignored). We had to consider the difficult situations, but we also had to select those situations, and by means of real actions eliminate the complicated situations and prevent them from occurring, or see to it that if they do occur they would be fewer and less complicated. Only thereby could the command take the initiative, master the situation, and command the situation.

In order to eliminate the possibility of the enemy's 22nd Division on Binh Dinh from relieving the Central Highlands, we used the 3rd Division (Military Region 5) to cut Route 19. In order to eliminate the possibility of the enemy in Play Cu going down to relieve Buon Me Thuot, we sent the 320th Division to cut Route 14. In order to reduce the possibility of the enemy's airborne and marine divisions in Da

Nang-Tri Thien Hue from going to the Central Highlands, the High Command ordered 2nd Corps and Military Region 5 to act and launch strong attacks against Thuong Duc, and ordered 1st Corps, north of Ben Hai, to prepare to act, which prevented the airborne and marine divisions from leaving the Da Nang-Hue area, for at that time Hue and Dan Nang were more important to them than the Central Highlands. In order to actively guard against the possibility of the U.S. attacking with its air force, we had to deploy good anti-aircraft defense, including missiles to shoot down enemy airplanes flying at high altitudes. Thus we not only had to very accurately predict many situations but also know how to select, limit, and eliminate situations advantageous to the enemy and disadvantageous to us. Only then can we completely take the initiative and master the situation.

Taking the initiative in war and in strategy is extremely important and is essentially up to us. If we are to do so we must grasp the laws and conditions and unify the objective and the subjective. Only then will things operate in accordance with our desires, and only then can we win. The law-like nature of the unity of the objective and the subjective is something about which we often speak, in places and at times we have not paid adequate attention to it and have not firmly grasped the conditions of the existence of objective things and the development of subjective dynamism in order to unify the subjective and the objective. Therefore, in providing guidance we often want to accomplish many big things but do not have the conditions for doing so and cannot create those conditions. Thus we usually do not attain good results, and quality is not high.

In brief, we must adopt policies, make decisions, draft plans, and set norms on the basis of the specific conditions of things. They should not exceed those conditions, or if they do should not exceed them by much. But when acting we must develop our subjective dynamism to a high degree, know how to create conditions, and have sufficient art to create conditions to enable the attainment of the highest effectiveness with such objective conditions, perhaps two or three times greater than with the previous conditions. To do so is to be dialectical, scientific, and revolutionary.

ARMY, PUBLIC SECURITY UNITS MAINTAIN SECURITY IN HA SON BINH

Hanoi QUAN DOI NHAN DAN in Vietnamese 23 Oct 81 p 1

[Article by Doan Phuong Dong: "Troops and Public Security Forces in Ha Son Binh Closely Coordinate to Maintain Security in Economic and Populated Zones"]

[Text] Army units stationed in Ha Son Binh have closely coordinated with the local public security, militia and self-defense forces to intensify the task of maintaining order and security, contributing to the managment of the natural resources and property of the state and participating in market management in strict accordance with the circulation and distribution policy.

In view of the actual situation in each locality, army and public security units have set up 16 control stations along important sommunication roads in order to ensure safety in economic, populated, forest and mountainous areas which abound in precious forest and local products.

Over the recent past, these control stations have inspected 22,586 passing vehicles and detected most of the violations of transportation regulations committed by drivers who illegally carried goods or connived with traders in stealing state property. By doing so, the control stations have aided financial organs to retrieve many kinds of precious goods such as grain, gasoline, oil, chemical fertilizer and many types of forest and local products of high economic value.

Owing to the assistance of the militia and self-defense forces and the people in various localities, the public security force and army units have caught and detained many inveterate hooligans who carried out activities along communication lines. While setting up control stations, Units B-08 and H-99 have cooperated with local public security, militia and self-defense forces in intensively patrolling and guarding important centers such as railroad stations, piers and bus stations in order to protect them and to provide safety for transportation trips. Since the task of protecting production and managing products has been satisfactorily carried out recently in the two ports of Ky Son and Hong Van, the quantity of stolen and lost goods has been clearly reduced and many negative practices prevented.

TUY HOA PUBLIC SECURITY FORCES THWARTED CRIMES, ESCAPES BY SEA

Hanoi QUAN DOI NHAN DAN in Vietnamese 26 Oct 81 p 3

[Article by Huynh Quang Nam: "Internal Solidarity, Satisfactory Fulfillment of Mission"]

[Text] After studying and thoroughly understanding the spirit of Directive No 92 of the Party Central Committee Secretariat on the building of wholesome public security forces and the joint directive of the Ministries of National Defense and Interior, the people's public security forces in Tuy Hoa City have effected new changes, achieved internal solidarity and satisfactorily fulfilled their mission.

Owing to the solidarity and assistance of the people and troops in the first 9 months of 1981, the people's public scurity forces in Tuy Hoa City neatly foiled 27 attempts to escape by sea and 1 case of reactionary activities, annihilated 3 renowned gangs of snatch-and-run robbers, uncovered, tracked down, caught and dealt with 100 persons involved in more than 60 criminal cases--thus reducing the number of criminal cases by 104 and that of escapes by sea by more than 50 percent as compared with the same period last year. This achievement represented the frustration of 100 percent of capital offenses and 93 percent of ordinary crimes and led to the retrieval of four motorboats, four Lambretta vehicles, objects in kind and hundreds of thousands of dong in cash and to the return of these items to the state and citizens. To intensify market management, the city people's public security forces coordinated with the tax and trade sectors to detect and deal with scores of cases of speculation and smuggling and retrieved for the state's benefit more thn 1 ton of cement, 3 tons of gasoline and oil, 100 kgs of insecticides, 2,000 meters of fabric and hundreds of kilograms of bicycle parts.

FORMER REPORTER-PHOTOGRAPHER ARRESTED FOR ANTIREVOLUTIONARY PROPAGANDA

Hanoi HANOI MOI in Vietnamese 7 Oct 81 p 2

[Article by Phan Tuong: "Against Enemy Psychological Warfare and Counterpropaganda Arguments: Impossible to Dodge the People's Ears and Eyes"]

[Text] Nguyen Van Chi, 45 years old, resides at 10 Tenth Street, Nghia Dung (Ba Dinh Precinct). Prior to 1960, Chi worked as a carpenter then followed a training course on press photography before being employed at a press organ. But immediately afterward he was expelled from that organ for lacking the qualification of a reporter.

In August 1963, Chi was arrested and sentenced by a court to 5 years in jail and 3 years of deprivation of citizen rights for antirevolutionary propaganda. Following release from jail, he committed a new crime--beating up his pregnant wife--for which the court sentenced him to 2 years in jail.

"Young brothers, listen to me," Chi once said, "there will be no golden era for communism. Trust no one, but yourselves, and act in accordance with your own 'ideal' (!). Thus, you must ponder and act...Tomorrow, young brothers, come to my home to 'wet your whistles,' and I'll tell you what we must do now." Bad elements enticed by Chi, including Do Trong Vinh, Ly Ngoc Anh, Dinh Quang Ngoc, etc., got together at the teahouse at 18 Hang Bun Street. They were won over to Chi's side. That day, there were two young customers in the teahouse. Chi read some reactionary verses of the Nhan Van-Giai Pham clique.

Outraged at the reactionary language, the two youths sternly warned Chi. But their warning fell on stony ground.

Chi's home has become a meeting place for the gang. Sometimes, pretending to be drunk he incited young followers to spread distorting propaganda aimed at maligning the state and creating dissention among local leading cadres. Chi gradually sank into antirevolutionary activities and debauchery. His home sheltered prostitutes.

We have read Nguyen Van Chi's own "Ideological Memoirs" found in the court records on his case. Chi passed on his memoirs to young followers, urging the latter to read them and "pick up his ideas"--as he put it--so that they would follow his example in acting against the people. His "memoirs" contain reactionary ideas, stir up hatred and opposition to our party and state.

In recent days, he has clearly seen his antirevolutionary acts, and has written the following lines in his self-criticism sheet: "My action has left noxious and lasting consequences on society, causing a number of youths..to lose trust in the party and state..."

Nguyen Van Chi was not only content to entice the people and disseminate reactionary propaganda, but he has also helped a number of traitors to the fatherland to carry out their activities. Chi enticed K to buy weapons and to flee abroad. At the investigating organ, Chi confessed, "My activities were aimed at disturbing political security, social order and safety, and at causing the people to have less confidence and a number of youths to lead a rotten and debauched life..."

Nguyen Van Chi's antirevolutionary activities have not escaped the vigilant eyes of the people. Sister V and Mr Q, as well as the two youths at the above teahouse, after hearing Chi spread reactionary arguments warned him and asked responsible organs to monitor his activities.

Certainly, during his stay in prison, Nguyen Van Chi will carefully ponder his last statement, "I have committed crimes against the fatherland and against the people."

MILITARY AFFAIRS AND PUBLIC SECURITY

ENEMY REMNANTS TRACKED DOWN, BANDITS CAUGHT IN TAY NINH

Hanois QUAN DOI NHAN DAN in Vietnamese 23 Oct 81 p 2

[Article by Nguyen Anh Tuyet: "Armed Bandit Groups Uncovered and Caught"]

[Text] Recently, militia and self-defense units in Tay Ninh Province unitedly and closely coordinated their activities to track down remnants of the enemy army and reactionaries in order to maintain order and security. At the same time, they cooperated with various sectors in managing the market and countering negative manifestations in society.

In conjunction with troops and the public security forces, militia and self-defense units uncovered and arrested many armed bandit groups and retrieved dozens of guns of various types together with 14 grenades. In addition, militia and self-defense units throughout the province educated thousands of illegal traders and induced them to return to the right path and directly partipate in productive labor.

EXHORTATION MARKS 30TH ANNIVERSARY OF POLITICAL ACADEMY

Hanoi NHAN DAN in Vietnamese 22 Oct 81 p 3

[Article by Major General Le Xuan Luu, director, Political Academy of the VPA: " Building the Political Academy To Make It Regular and Advanced"]

[Text] On 25 October 1981 the Political Academy will celebrate the 30th anniversary of its proud Day of Traditions.

In the past 30 years, along with the country's great changes, the Political Academy of the VPA has gradually grown up and little by little has successfully fulfilled the political tasks assigned to it by the party, people and army.

As we look back at those 30 historic years, the academy has made important contributions to training cadres for the armed forces and satisfying the need of the construction and combat task. The more than 20,000 cadres trained at the academy, through the tests of combat and regular work in the 2 wars of resistance against France and the U.S. and the 2 wars against the Chinese expansionist aggressors, have proved their sound abilities and the capacity to act in their assigned positions and have become the party's outstanding intermediate- and high-level cadres in the army.

In addition to the cadres-training achievement, the academy has also created for itself a definite potential in every aspect by first of all training teachers and research and management cadres at good scientific and pedagogical levels, who responded to a definite extent to the complex and changing political tasks of the academy in the recent historical periods and have a good basis for moving forward and fulfilling their task in the new period.

In the 30 years of struggle to fulfill its task, the Political Academy has acquired the basic strengths that helped to create the precious traditions of a political school in the people's armed forces.

Such major traditions are the following:

In the training of cadres, the academy always clings to and serves the politico-military task assigned by the party to the armed forces; as a result, the cadres it trained have satisfied the construction and combat need of the army in different periods.

In the struggle to carry out the party's educational line and task, the academy sustains the systematic and in-depth teaching of the basic theories of Marxism-Leninism, which is smoothly combined with the teaching of the politico-military line of the party; builds up and trains cadres in acquiring the communist outlook on the world and on life and faith, the scientific method of judgment and a thorough understanding of the revolutionary and scientific nature of the party line; and heightens its cadets' will and determination to carry out the revolutionary line and task, thus making them after graduation capable of developing themselves steadily and soundly in the face of any complicated changes of the situation.

In the 30 years of struggle and growth, the academy understands more and more keenly the party's educational principle and properly carries on the formula of relating theory to practice, study going hand in hand with practice and combining learning with total training in the training curriculum, as well as in the organization, form and method of training. As a result, it heightens the knowledge of cadets, improves their confidence and will power and provides them with an ability to act in conformity with the party line and policies.

Ever since its establishment the academy has been upholding the spirit of self-sufficiency and self-strengthening, showing strong solidarity, overcoming difficulties and continuously striving to raise the quality of training. In each historical period, it always made a great effort to overcome any difficulties in connection with the size and quality of the ranks of cadres and teachers, school facilities, training equipment and teaching and learning materials.

That tradition of self-sufficiency and self-strengthening which is closely linked with the tradition of solidarity and tight coordination helps to develop the overall strength of every force in the academy to raise the quality of cadres' training.

On the road to building a regular and advanced academy we still must overcome quite a few difficulties and complicated situation and resolve many great contradictions. But with precious traditions the academy will surely overcome any obstacles to fulfill its task in the new stage.

Our army is facing the great and urgent political tasks of building itself into a skillful-in-battle, well-trained, modern, regular and revolutionary people's army ready both to combat and to fight to defend the fatherland and to contribute to productive labor for national construction while fulfilling the long-term and complicated international obligation. The task of the academy also enters a new stage.

The academy has the main task of training two kinds of specialized cadres of highly specialized capacity. One is the political cadres for the combined arms and a certain branches of service and arms of tactical and campaign levels. The other is the military pedagogical cadres specialized in the social sciences and teaching at two levels, the advanced military schools and the military academies.

On the other hand, in the capacity of an academy, its cadres-educating and -training task cannot be separated from the task of doing scientific research, for the need to develop scientific research originates from the need to raise the quality of its education, the need to promote development of cadres and teachers and the need to train military pedagogical cadres having a high degree of scientific knowledge, the ability to work independently, creative thinking, skills, learning habit, the ability to conduct research by themselves and growth potential in the course of their work.

To step up the effort to build itself into an advanced regular school and to properly carry on the two basic functions mentioned above, the academy must understand more thoroughly the party guidelines on educational reform and quickly create strong and simultaneous changes in all of its activities.

First of all, it must ceaselessly understand more thoroughly the objective of the party's educational principle.

Whom does it train? What kind of man does it train? Those are always questions of topmost importance for any school. To determine the right training objective and need means to set the correct direction, to understand the entire teaching-learning and educational process, to gather all pedagogical efforts to obtain the desired model man and to satisfy the army's immediate and long-term revolutionary needs. The more the objective and need are clarified and identified, the more clearly the direction will be set for the pedagogical efforts of the school to create great capabilities and to raise the output and quality of training. The training objective must be made practical to suit the great changes in many aspects of the army in the course of its becoming regular and modern -- the changes in connection with staff organization, equipment, leadership and command procedures, the military art, etc. These changes are giving rise to very high new requirements from the cadres of the party in the armed forces, including the political cadres and the pedagogical cadres specialized in the social sciences.

In addition to the training objective and need, the academy must adhere to the educational principle of the party and all of its teaching-learning and educational activities ranging from organizational pattern, curriculum and operation plan to teaching-learning methods, managerial work and educational activities, which must be in conformity with the modern educational scientific laws and ensure to the highest extent the fulfillment of its training objective and need.

To apply the correct understanding of the educational principle to the entire teaching-learning and educational process is not a simple matter. We must always be creative and constantly guard against and overcome two tendencies. One is to teach and to learn in a dogmatic way or strictly by the book, to stop at the common knowledge, not to go into the realities of the transitional period nor into the realities of the revolutionary struggle and the military realities and to shape qualities and abilities to act to the requirements of occupations and responsibilities. The other is the tendency to be pragmatic and simple, to reduce the requirement for scientific knowledge affecting the formation of a perfected world outlook and to limit the development of creative scientific thinking on the part of students.

The new development in connection with the training objective and need unavoidably creates the need for renewal of the educational program. We must quickly build a program system having a scientific base, being in touch with the modern knowledges, being rationally balanced and conforming with the training objective and need and the time allowed while avoiding overloading and stuffing students with too many knowledges, nor the tendency to be too brief, simple, unbalanced and unscientific.

To build a curricular system must be closely linked with an effort to perfect the teaching subjects and activities and the outlines of teaching and learning for each subject and classroom. All of the documents having the nature of a program of action in the teaching-learning and educational activities of the academy and each scientific component must be perfected and stabilized.

The renewal of the training objective and need and of the educational program urgently requires a corresponding renewal of the teaching and learning methods in the academy. On the basis of a thorough understanding of the educational principle of the party, the direction for such a renewal of methods is as follows: with limited time and reduced costs, to ensure the largest volume of information and to shape in the most effective manner the scientific and revolutionary world outlook, the view of life, the faith in communism and the skills and ability to act in accordance with the training objective and need. The nature of the modern scientific methods requires the finest interaction between teachers and students, with the former being in the central position of guidance in the teaching-learning and educational process. Students are true masters and highly dynamic active subjects. We must turn the training process into a process of self-training and self-teaching, the process of ceaselessly developing a creative and independent thinking on the part of students.

The renewal of methods must be achieved simultaneously in all the links and steps of teaching-learning and each of these links and steps must be materialized to become a definite pattern that contributes in the most active manner to the common quality of the entire system to ensure the highest educational results.

The renewal of curriculum and the system of training methods requires that we improve the organization of management of the teaching-learning and educational process in the academy to make this process take place in accordance with and by its plan, in accordance with and by strictly defined and unified procedures.

The teaching-learning forms and methods are to go hand in hand with the organization of training that is further developed and gets more scientific and strict everyday and with a volume of scientific information that gets larger everyday. All of this requires a strong renewal of the material base, equipment, auditorium facilities, training means and gymnasium in the direction of modernization. We must gradually renew and strengthen the material and technical training base to go from a low to a high level, on the basis of the need for raising the quality of training and the actual conditions of our economy.

The educational and research task of the academy depends to an important extent on the scientific potential of its teachers and cadres. Therefore, to build a strong and homogeneous body of cadres consisting of teachers, research cadres, academy unit management cadres, organ cadres and technical cadres is a permanent basic need and at the same time an urgent one.

We must build a balanced and homogeneous body of cadres that is of sufficient size, has a reserve for itself and a source of regular reinforcement, has high qualities in terms of both political quality and scientific knowledge and responds to the educational and scientific research task of the expanding and developing academy.

The academy must further step up its scientific research. For a school of college and higher-learning level, the regular task of stepping up scientific research originates from the need within itself to raise the quality of training and scientific research. It determines the scope of theory and practical application in providing answers to the problems of social life and the army, as well as the teaching components, and creating vigorous changes in the students' ideological concept, feelings and action.

The quality of scientific research helps to strongly improve its teaching-learning and educational activities and to make these activities conform with the educational and scientific laws and bring about good results.

The quality of scientific research also helps to realistically strengthen the potential of the body of teachers and cadres and to make each of them capable of becoming an outstanding pedagogue and talented researcher. That is why education and scientific research always require an organic link and encourage each other to develop.

Celebrating the 30th anniversary of the proud Day of Traditions, the cadres, combatants, workers and civil servants of the Political Academy are looking back at its achievements, reviewing its traditions and at the same time seeing clearly the road that lies ahead. On the road that leads to building the academy into a regular and advanced one there still are many difficulties and hardships that require great efforts and strong determination. Under the leadership of the party, Ministry of National Defense and Political General Department; consciously learning from other schools, academies and units; and further developing the existing traditions, capabilities and experience, the Political Academy can move forward and fulfill even better its task in the new stage.

PARTY ACTIVITIES AND GOVERNMENT

STANDARDS FOR ACCEPTING, EXPELLING PARTY MEMBERS CLARIFIED

Hanoi HOI VA DAP VE CONG TAC DANG in Vietnamese Vol 1, 1980 pp 52-265

[Selected questions and answers from book entitled "Questions and Answers Concerning Party Work" published by Su That Publishing House, Hanoi, 1980; 20,200 copies printed at the Tran Phu Printing Plant in Ho Chi Minh City, printing completed 20 June 1980]

[Excerpts] 24. What are the present guidelines concerning party development?

The Political Report at the 4th National Congress of Delegates of the Party pointed out: "We must attach importance to quality and combat the tendency to place sole emphasis upon numbers; the development of the party must always go hand in hand with strengthening the party. On the one hand, we must accept truly outstanding persons who meet all standards; on the other hand, we must promptly expell from the party elements that have degenerated or become deviant. We must guard against and prevent decadent, reactionary elements and opportunists from infiltrating the party."

On this basis, the Organization Department of the Central Committee has provided the following guidance:

1. In party development work, we must always attach importance to quality, use standards as our foundation and provide close guidance through specific plans and measures. The number of persons accepted into the party is only of significance when these persons meet all qualitative requirements. We must struggle against the tendency to lower qualitative requirements and place sole emphasis upon numbers and struggle to correct the narrowminded attitude of not taking positive steps to create the conditions needed to develop the party.

2. Developing the party in exact accordance with standards and guidelines makes a positive contribution to strengthening the party and improving the party's corps of cadres; wherever the party is developed, it must be strengthened and the quality of party members must promptly be raised through education and training. Firmly strengthening the party is the basis for developing the party well. Therefore, party development must always go hand in hand with strengthening the party.

3. Regularly accepting into the party the most outstanding and enlightened persons and promptly expelling from the party persons who are not worthy to be party members,

persons who have degenerated or become deviant, persons who are speculators or are serving their own interests, are designed to strengthen the party and increase the fighting strength of the party. These are normal practices in party life, are laws of the exitence and development of the party.

4. In view of the fact that the party is in political power, opportunists try to infiltrate the party in order to serve their own interests; on the other hand, enemies of the class are always looking for ways to infiltrate the party in order to sabotage it. Therefore, we must be vigilant and prevent decadent, reactionary elements and opportunists from infiltrating the party; we must conduct regular inspections and promptly expell them from the party.

5. Through the revolutionary movements of the masses, we must carry out political tasks, especially the productive labor movement and the movements to fight and protect the fatherland, carry out the three revolutions, establish and uphold the right of collective ownership of the working people, maintain political security and social order and strengthen the national defense system; on the basis of the observations made by the mass organizations, we must correctly select the most outstanding and enlightened persons among the masses for training as party members. We should not evaluate a person seeking admission to the party in a onesided, superficial manner that is divorced from the realities of the revolutionary struggle.

The various party committee echelons must formulate and implement plans for developing the party in a "positive and sound" manner as set forth in Party Secretariat directive number 72 dated 8 May 1979.

31. In the development of the party, how are the objectives regarding building the organizations of the party established and achieved?

In party development, specific objectives regarding building the party organization must be established for each area, each field of activity and each type basic party organization.

1. The lowlands and midlands of the North: it is necessary to establish basic party organizations at basic units, such as villages, enterprises, schools, hospitals, village sized cooperatives, specialized corporations, airports, seaports and basic units of similar size. Party chapters and party cells must be established in factory shops, hamlet sized cooperatives, the various faculties within schools, the various clinics within hospitals, the production units in village sized cooperatives and similar units. Each party chapter must have from three to five party members who directly engage in productive labor, work and actual activities. There must be enough party members to establish a party cell or at least one or two party members in each production team, work team, sales counter and so forth.

2. The southern provinces: it is necessary to establish basic party organizations or party chapters in villages, wards, enterprises, cooperatives, hospitals, schools, specialized corporations, airports, seaports and similar units. Party chapters and party cells must be established in hamlets, housing clusters, production collectives, production units within village sized cooperatives, factory shops, faculties, clinics,

stores and similar units. There must be party members in the smallest component of the basic units, such as the production team, work team, sales counter and so forth.

3. In a number of special areas, such as the areas in which many religious followers live, the Khmer areas, Nam Bo, the Montagnard areas of the Central Highlands, the highland areas in the northern mountains and so forth, it is necessary to establish party chapters in villages, subwards and production and work units. Every party chapter must have enough party members to take charge of the important areas of work within the locality or unit, such as a secretary, chairman (or unit commander) and persons in charge of organization, propaganda-training, inspections, public security, military activities, the hamlets, production collectives, hamlet sized cooperatives and so forth. It is necessary to have a party cell or one or two party members and establish a nucleus group in the various components of basic units.

However, as regards those areas in which a policy has not yet been established regarding party development (such as the areas in which religious followers live in the South, the areas in which persons of Chinese ancestry live and so forth), it is necessary to transfer party members from other places in order to establish basic organizations of the party and necessary to take positive steps to build and develop nucleus cells and the contingent of core cadres outside the party.

4. Within the armed forces (which include the army, the armed people's public security force, the people's police and so forth): it is necesaary to establish party chapters in companies and at posts (and similar units). Each party chapter must have at least seven party members. On the platoon level and in similar units, there must be a party cell or one or two party members.

47. How are the prerequisites for joining the party applied to members of the ethnic minorities, especially persons in the highland areas?

In keeping with the instructions from the Organization Department of the Central Committee regarding persons of the highland ethnic minorities and on the basis of the stipulations regarding the prerequisites to be met by persons seeking to enter the party, the organizations of the party must select persons who:

1. Have been forged and challenged in work and proven themselves to be among the most progressive persons in the locality;

2. Are always confident in and loyal to the party, to the socialist Vietnamese fatherland.

3. Set examples in implementing the policies of the party and state regarding the ethnic minorities and the highland areas;

4. Have good relations with the masses, desire to learn and desire to make progress.

As regards members of the ethnic minorities in the mountains, our party does not accept into its ranks the following:

--"Persons who specialize in superstition and religion" (Party Secretariat regulation number 12 dated 4 February 1978);

--"Persons who are gamblers, alcoholics or are addicted to opium"(Party Secretariat directive number 121 dated 7 April 1966);

--"Persons who are illiterate"(guidance from the Organization Department of the Central Committee, April 1978).

49. May religious followers be accepted into the party?

The party does not accept "persons who specialize in superstition and religion"(Party Secretariat regulation number 12 dated 4 February 1978) and persons who still believe in Christ, still believe in Buddha, persons who still hold an ambivalent attitude regarding church and persons who participate in the ceremony of confession.

It is necessary to clearly distinguish between the mass of working people who are religious followers and "persons who specialize in superstition and religion." As regards outstanding persons among the mass of religious followers (persons who are cadres, manual workers or personnel of the state, collective farmers or members of the other strata of laborers), the party organization will examine their qualifications on a case by case basis if they meet all the prerequisites for joining the party.

These persons must be persons who:

1. Possess clear awareness of the working class, the party and the tasks of the party member and clearly understand the nature of religion and the essence of the church;

2. Have been forged and challenged in labor, production, combat and work and comply with the lines and policies of the party and the laws of the state;

3. Actively struggle against counter-propaganda arguments, distortions, deception and demagoguery by reactionaries masquerading as religious persons;

4. Desire to learn, increase their knowledge of the lines and policies of the party, increase their knowledge of science, technology and management, actively apply this knowledge in the realities of production and the work within their units, try to cultivate revolutionary qualities and virtues, have a close relationship with the masses and have the trust of the masses...

51. Which persons may not be accepted into the party?

The Party Statutes stipulate: "Persons joining the party may not have violated the regulations set forth by the Central Committee concerning their political background" (Article 4).

Secretariat regulation number 12 dated 4 February 1978 set forth the following cases in which persons may not be accepted into the party:

--"Persons who personally serve as lackeys for the enemy, are counter-revolutionary reactionaries or are persons who have committed crimes against the people"(such as espionage agents, spies, secret service agents, CIA agents, intelligence agents and so forth; persons active in political parties and reactionary organizations; persons active in the organizations that have the purpose of suppressing the revolution or in the executive committees of organizations of a broad mass nature established by the enemy in hamlets and housing clusters or on higher levels; persons in the armed forces of the enemy who hold command positions and persons who have engaged in acts against the revolution, committed crimes against the people, etc.).

--"Persons who specialize in superstition and religion."

--"Persons who once participated in the revolution but surrendered to the enemy and betrayed the revolution."

--"Persons whose political background is unclear."

--"Persons who, although they have not served as lackeys of the enemy, have a father, mother, wife, husband or dependent who is a reactionary, who owes a blood debt to the people and who has been dealt with by the people."

--"Persons who belong to the strata of exploiters (landowners, wealthy farmers, bourgeoisie and so forth) may not be accepted into the party even if they become members of another stratum of society."

--"Persons who truly specialize in superstition and card worship, persons who are gamblers, alcoholics or addicted to opium" may not be accepted into the party (Secretariat directive number 121 dated 7 April 1966).

--Generally speaking, from now on "persons who are illiterate" may not be accepted into the party (guidance from the Organization Department of the Central Committee, April 1978).

In accordance with Party Statutes, no one less than 18 years of age may be accepted into the party (Article 1); at places where there is a chapter of the Ho Chi Minh Communist Youth Union, no one who is a youth but not a Youth Union member may be accepted into the party...(Article 4).

122. In the present situation, what kind of person is a fully qualified party member?

Every party member must endeavor to forge himself so that he acquires all the qualifications of a communist soldier as stated in the resolution of the 4th National Congress of Delegates of the Party and in the report summarizing party building and revising Party Statutes. In the present stage, the fully qualified party member must embody the following several basic points:

1. He must be more politically enlightened than the masses, possess a clear and unswerving revolutionary stand and ardently support the socialist revolution and

socialist construction. He must clearly discern between friends and enemies, especially be clearly aware that our immediate enemy is the Beijing expansionists, actively struggle against the Beijing expansionists, against the imperialists and their lackeys and consciously protect the militant solidarity between ourselves and the Soviet Union, the fraternal socialist countries and, especially, the militant solidarity among Vietnam, Kampuchea and Laos. He must totally agree with and must, on his job, actively endeavor to implement the lines and policies of the party, set examples that manifest the role of collective ownership in production, combat and work and set examples in complying with policies, protecting public property and being ready to accept any job assigned by the party; he must not operate on the basis of "averages," must not solely concern himself with his personal interests, the interests of his family...

2. He must possess a high will to fight, actively protect that which is correct, struggle against mistakes and negative phenomena, possess a sense of organization and discipline and not be a person who places compromise above everything else or struggles in an unprincipled manner.

3. He must respect the right of collective ownership of the masses, not engage in acts of suppressing or intimidating the lower level and the masses and have the trust of the masses.

4. He must possess the spirit of struggling against himself, possess the spirit of practicing self-criticism and criticism well, not be complacent or satisfied, accept the criticism offered by comrades, fellow workers and the masses well and take positive steps to rectify his shortcomings while wholeheartedly helping his comrades and fellow workers rectify their shortcomings so that they can make progress. When encountering antagonisms between common interests and personal interests, he must struggle with himself in order to overcome difficulties and place common interests, the interests of the collective above everything else.

5. He must study in order to raise his level of knowledge so that he can perform his job well and must maintain a wholesome, pure and diligent lifestyle, must be close to the masses...

In summary, the fully qualified party member is a party member whose outlook, thinking, actions and so forth fully reflect the essense of a revolutionary vanguard soldier, have the effect of leading the masses and are recognized as good by the majority of party members and the masses. Qualified party members might also make mistakes and commit shortcomings but they must not be so serious that they cause them to lose the nature of a party member; and, party members must adopt a positive attitude and rectify their shortcomings in order to make progress.

From among the qualified party members, it is possible to select outstanding party members who embody the sense of collective ownership, the will to fight, the spirit of dedication and the initiative to overcome difficulties and excellently complete all tasks assigned to them, including international tasks; they possess the spirit of struggling against mistakes, against the violation of policies, suppression of the masses, factionalism, actions that cause the loss of internal unity and actions that cause a loss of democracy with the people; in terms of their qualities and ethics, they have much that is deserving of praise...

124. What kind of persons are unqualified party members?

The resolution of the 4th Party Plenum pointed out that unqualified party members are the following types of persons:

1. Persons who have clearly violated political standards and elements who support enemies of the revolution.

2. Persons whose unorganized and undisciplined actions create serious factionalism, cadres who have position and authority but degenerate or become deviant and elements who steal, engage in bribery, suppress good persons, intimidate the masses and fail to comply with the policies of the party.

3. Persons whose political awareness is very low, who have been educated many times but still not made progress and who are not insistent about remaining in the party.

In the new situation, in keeping with the spirit of Party Secretariat directive number 72 dated 8 May 1979, unqualified party members also include: persons who have lost the will to fight, abandoned their task or are unwilling to accept tasks at places where difficulties and hardships are experienced; and, party members of Chinese ancestry...

As regards unqualified party members, the party organization must make the following distinction based on the seriousness of their mistake: persons who must be immediately expelled from the party and persons who can be allowed to remain in the party for a given period of time in order to be further educated.

125. Which types of unqualified party members must be immediately expelled from the party?

Persons who belong to the following types of unqualified party members must be examined by the authorized agencies of the party for immediate expulsion from the party:

1. In cases in which there have clearly been violations of political standards as set forth in the regulations of the Party Central Committee, the concerned persons must be immediately expelled from the party. In cases that are not clear, it is necessary to conduct an investigation and determine the truth in order to resolve the case before issuing party membership cards.

2. Party members who have degenerated, become deviant or committed serious mistakes.

3. Party members who have been classified by directive number 192 and circular number 22 of the Secretariat as having a very low level of awareness: those who join the party but do not understand the party, those who do not fulfill their tasks within

the party and those who have been educated many times but have not made progress, are not better than the masses; these party members should be encouraged to voluntarily ask to leave the party or the party chapter should decide to remove their names from the roster of party members.

The expulsion of unqualified members from the party must be carried out in exact accordance with the policy stipulated in the various directives of the Secretariat and the guidance provided by the Central Inspection Commission and the Organization Department of the Central Committee and must comply with the procedures stipulated in the Party Statutes.

126. How are party members who are politically unqualified to be party members and profiteers who infiltrate the party dealt with?

--Persons who are politically unqualified to be party members are persons who have political problems and should not have been accepted into the party as stipulated in Political Bureau directive number 91 dated 1 March 1965, directive number 121 dated 7 April 1966 and regulation number 12 of the Party Secretariat dated 4 February 1978 but who were mistakenly accepted into the party by a party organization.

--Profiteers who infiltrate the party are persons who join the party not for the sake of fighting for the revolution, for the ideals of the party but are decadent elements who infiltrated the party for personal gains. They usually employ various deceptions in order to be accepted into the party, such as concealing their decadent nature, lying or bribing a number of party members in order to be introduced to the party or sponsored for acceptance into the party. After becoming party members, they acquire a certain position within the party through deception in order to take advantage of their position, engage in speculation and profiteering and satisfy the interests of themselves, their families and the members of their faction; they look for ways to bring their family, neighbors and other members of their faction into the party, into state agencies, causing much harm to the party, the state and the people.

Party Secretariat directive number 192 dated 26 October 1971 pointed out: "If persons of the two types mentioned above, although they only comprise a very small number, were allowed to remain within the party, it would be contrary to the line, guidelines and principles of party building, adversely affect the reputation of the party, harm the implementation of the position and policies of the party..."

"Our party must routinely conduct thorough internal investigations, rely upon the masses and organize, mobilize and encourage the masses to inspect the qualifications and activities of party members in order to determine which party members must be expelled."

In the two cases mentioned above, once an unqualified party member has been discovered, the concerned organizations of the party must conduct a thorough inspection, conduct thorough research, resolve all unanswered questions, deliberate and immediately take action in exact accordance with the policy of the party.

127. What kind of persons are party members who have degenerated or become deviant and how are they handled?

In accordance with Party Secretariat directive number 192 dated 26 October 1971, party members who are degenerate or have become deviant are not persons who were unqualified to be party members when they were first accepted into the party. However, in the course of revolutionary activities, either because of their inherent weaknesses or adverse influences from the outside, they have failed to meet the challenges of the revolution, gradually lost their will to engage in revolutionary struggle, gradually lost their qualities and ethics, their sense of organization and discipline. They are persons who, although they have been criticized and helped by the party and the masses, are unwilling to accept this criticism and help, unwilling to rectify their mistakes and who have become ever more deeply mired in mistakes. These persons have lost all of their qualifications to be party members, have done much that is wrong, have damaged the reputation of the party, hamred the interests of the state and the people and are disdained and hated by the people.

Politically, because they have lost their will to engage in revolutionary struggle, they have deserted, have abandoned their combat position and do not comply with the directives and orders of the upper level; because they are very selfish, they do not comply with the positions and policies of the party or the laws of the state, set bad examples among the masses and even take acts against the implementation of these positions, policies and laws; because they are personally dissatisfied or hold viewpoints that are contrary to the lines and viewpoints of the party, they encourage party members and the masses to oppose the resolutions and directives of the party in a conscious manner, even maintain contacts with foreigners, conduct clandestine activities against the party...

As regards their qualities and ethics, they are degenerate to the point of becoming persons who engage in misappropriation and smuggling, commit crimes against the property of the state and the cooperative, are seriously and systematically depraved and so forth; they are very dictatorial, arbitrary, bureaucratic and arrogant, intimidate the masses, suppress forthright persons, seriously violate the right of collective ownership of party members and the masses and are hated by party members and the masses; they seriously violate the principles of organization and discipline and undermine the solidarity and oneness of mind within the organization of the party, which leads to factionalism and the undermining of the organization; they intentionally submit inaccurate reports, conceal mistakes, falsely accuse others and inflict serious harm upon the interests of the party and the masses...

In summary, they are "persons whose unorganized and undisciplined actions cause serious factionalism. They are cadres of position and power who have degenerated or become deviant. They are elements who steal, engage in bribery, suppress good persons, intimidate the masses and do not comply with the policies of the party" as stated in the resolution of the 10th Party Plenum dated 27 July 1978.

In the present situation, party members who have become degenerate or deviant or committed serious mistakes are the following:

1. Party members at places where fighting is occurring who long for peace, completely lose their will to fight, surrender to the enemy and abandon their task.

2. Party members at places where all the necessary conditions stipulated by the upper level have been prepared and socialist transformation is being carried out who intentionally do not join production collectives or cooperatives, do not pay their agricultural taxes and do not fulfill their obligation to sell grain and food products to the state.

3. Persons who commit the crime of murder or use force to threaten and intimidate the masses and are hated by the masses.

4. Persons who steal public property or property belonging to the collective, even one time if the offense is serious; persons who only steal by pilfering from the people many times and who have been educated and helped but have not rectified their shortcoming and are despised by the people.

5. Persons who use their position or authority to steal, engage in bribery, embezzle, issue false papers and protect decadent elements who steal property from the state and earn a living illegally.

6. Persons who use merchandise and property of the state or collective to engage in conspiracy, barter and satisfy their personal interests, thereby harming the state and the collective.

7. Persons who, due to a lack of responsibility, allow property of the state or collective to be seriously harmed or lost or inflict major harm upon the life and property of the people.

8. Persons who pool capital with capitalists and protect bourgeoisie in order to engage in smuggling or earn a living illegally.

9. Persons who are alcoholics, addicted to opium or gamblers who have been educated and counselled many times but still refuse to change their ways and are ridiculed by the masses.

10. Persons who specialize in such superstitious crafts as sorcery, fortune telling, magic and so forth.

If, after comprehensively examining and evaluating the activities of party members of the types mentioned above, these mistakes are found to be more than temporary, to be systematic and these party members are found to have truly degenerated or become deviant, determined steps must be taken to expell them from the party.

Party Secretariat circular number 22 dated 5 September 1977 pointed out: "In cases involving persons who are degenerate or deviant, it is necessary to coordinate inspections by the party with inspections by the state agencies and the mass organizations in order to reach accurate conclusions. If, after examining these cases in a comprehensive manner, the persons involved are considered to no longer possess the qualities of a party member, determined steps must be taken to immediately expel them from the party." When taking action in a case, party chapters and responsible agencies and organizations must examine the case in a comprehensive, objective manner, must coordinate their action in the case with the strengthening of the basic level and launching a mass movement, must possess the necessary determination and must not act on the basis of personal feelings or an attempt to save face nor on the basis of prejudice or a onesided attitude. A conference of the party chapter must discuss and make a decision concerning each case and then suggest to the authorized agencies of the party that they make a decision in accordance with the provisions of the Party Statutes.

Our party has the policy of being determined to expel unqualified members from the party. Of importance, however, is that the party requires that its various organizations take mqasures to prevent and stop party members from degenerating and becoming deviant. The various organizations of the party must attach importance to education, self-criticism and criticism within the party; they must promptly struggle against every mistake and negative phenomenon of party members as soon as they appear, promptly take disciplinary action ranging from reprimand to expulsion from the party in necessary cases and be determined to maintain the strict discipline of the party.

133. How do the organizations of the party on the various levels exercise their authority to expel unqualified members from the party?

Party Secretariat directive number 192 dated 26 October 1971 stipulates: "The various party committee echelons, from the central level to the provinces and the districts, must routinely conduct thorough inspections and promptly detect deviations in order to promptly correct and rectify them.

"As regards the authority to expel unqualified members from the party, a conference of the party chapter shall discuss and decide the matter and suggest to the authorized agencies of the party that they make a decision in accordance with the provisions set forth within the Party Statutes. In order to insure close leadership of the action of expelling unqualified members from the party, the Political Bureau has decided that the provincial party committees and district party committees must, in the campaign to improve the quality of party members, provide more guidance to the basic level. The standing committees of the district party committees (or similar level) must closely guide and inspect the making of the decision to expel a member from the party. Cases involving expulsion from the party due to a member's political background must be examined and decided by the standing committees of the provincial party committees. In cases in which the action is being taken against party members who are cadres, the decision must be made by the party committee echelon that is responsible for managing the cadre in question. Cases in which action must be taken against party members who are cadres that hold the positions of secretary or deputy secretary of a district party committee, chief or assistant chief of a service or similar position or are party members who were accepted prior to the August Revolution and cases that could influence the front policy, the nationalities policy or the policy regarding intellectuals, the standing committee of the provincial party committee (or the party committee on a similar level) must exchange opinions with the

Inspection Commission of the Central Committee and the Organization Department of the Central Committee before making a decision.

"It is necessary to maintain the collective work procedures of the various party committee echelons when examining and deciding cases; these procedures may not be haphazardly applied."

Circular number 18 dated 21 July 1979 of the Organization Department of the Central Committee provides the following guidance: "When ratifying the expulsion of unqualified members from the party, it is possible to follow the same procedures employed when ratifying the acceptance of party members (prepared for by the inspection committee and the organization commitee)."

Directive number 192 also states: "As regards places at which the party organization is still making serious mistakes and places at which the base has 'crumbled' or leadership cadres are weak, the upper echelon must send cadres to help strengthen the party committee echelon and then carry out the expulsion of party members once the part committee echelon has been completely strengthened. It is necessary to guard against some decadent party members taking advantage of this measure to retaliate against good party members and undermine the organization of the party."

"As regards the form of expulsion from the party, many different forms must be employed, such as purging, removing the party member's name from the party member roster and advising a party member to withdraw from the party."

In order to perform the jobs mentioned above well, Party Secretariat directive number 72 dated 8 May 1979 also emphasizes: "It is first of all necessary to correct the negative phenomena and shortcomings of the party committee echelons themselves. If necessary, determined steps must be taken to replace key leadership cadres who have made mistakes so that the work of building the party can be carried out smoothly.

154. How are party membership cards issued to party members? What is done in the case of party members who have died or been expelled from the party?

Secretariat directive number 83 stipulates: "Party membership cards shall only be issued to party members who are fully qualified to be party members and who complete the tasks of the party member as stipulated in the Party Statutes and Secretariat directive number 72." These are party members who, in the special phase of activities to study and implement Secretariat directive number 72, have been evaluated by the party organization, which has concluded that they are fully qualified to be party members. All party members must be classified in accordance with Guidance Number 2078 dated 15 October 1979 from the Organization Department of the Central Committee concerning the evaluation and classification of party members.

The party organization must reclaim the party membership cards of party members who have died or been expelled from the party.

Deceased party members: in accordance with present regulations concerning party members who die while performing their task, such as party members who die in combat or combat support operations, die as a result of an accident on the job or other kind of accident, die as a result of old age, illness and so forth, if requested by the family, the district party committee or a party committee on a similar echelon may give to the family the party member's membership card with picture to keep as a remembrance. When a party member dies as a result of a negative action, such as suicide, the party organization may not give the party member's membership card with picture to the family regardless of how many achievements the party member recorded, how many contributions he made to the revolution.

As regards party members who have been expelled from the party (as a result of being purged, having their names removed from the roster of party members or being counselled to withdraw from the party), all organizations of the party must reclaim the party membership card. When the decision by the party committee echelon above the basic organization to expel a member from the party is made public, the party chapter committee or installation party committee must reclaim the party membership card. Absolutely no one who is expelled from the party is allowed to retain his membership card.

The district party committees, town party committees, precinct party committees and city party committees subordinate to the province, the ward party committees of municipalities directly subordinate to the central level and the party committees on similar levels must forward the reclaimed party membership cards to the Organization Department of the Central Committee through the organizational system of the party.

156. Which party members are not issued party membership cards?

Secretariat directive number 83 states: "Party members whose qualifications are being examined by the party organization and party members who are being kept within the party for disciplinary action may not be issued party membership cards; party membership cards may be issued to such party members when they are recognized as fully qualified party members or when their party member rights have been officially restored. When a party membership card has been received by a party member but the party member is disciplined within the party, his membership card must be temporarily reclaimed and will be returned to the party member once his party membership rights have been officially restored; the secretary of the installation party committee (or secretary of the installation party chapter) is responsible for safely storing these temporarily reclaimed party membership cards."

The Organization Department of the Central Committee has provided the following specific guidance:

1. Party members who are considered to be unqualified by their party organization may be kept within the party for a time in order to be re-educated. These are party members who committed shortcomings and were disciplined but not expelled from the party; party members who once recorded achievements in combat, production and work, who have contributed to the socialist revolution and the protection of the fatherland but whose will to fight has declined, who do not embody the exemplary vanguard role of the party member in many areas of life, who no longer have an impact upon the masses and who no longer have the trust of the masses but can still become good party members if they are forged and helped; party members whose level of

political asareness is low but who still fervently desire to remain in the party and who show prospects for becoming good party members; party members who, although they have not stolen public property or property belonging to the collective, know other persons who have violated the law but have not reported them to the organization, have not struggled to promptly stop them; party members who, although not personally involved, have allowed relatives in their family (wife or husband, child and so forth) to do things that are contrary to the lines and policies of the party and state, such as engaging in illegal trade, practicing sorcery, not joining a cooperative or not fulfilling their obligation to sell grain and food to the state but do not educate them, do not struggle against or try to stop them, do not adopt a clearcut attitude and so forth.

The party organization establishes a deadline by which the party members mentioned above must make improvement. If, by this deadline, the party organization recognizes the party member in question as being fully qualified, the party member is issued a party membership card. If, after being issued a party membership card, the party member shows himself to be unqualified in some way and must be expelled from the party, his membership card must be reclaimed in the same way as membership cards are reclaimed from persons who have been expelled from the party.

2. Party members being detained within the party for disciplinary action: party members who are being detained within the party for disciplinary action may not be issued party membership cards; if, at the end of this period, the party member rights of the party member in question are officially restored, he may be issued a membership card; if these rights are not restored, the party member's name must be removed from the roster of party members or he must be purged from the party.

3. If party members who are being detained within the party for disciplinary action intentionally fail to turn in their membership card, their name shall be removed from the roster of party members or they shall be purged from the party.

4. Party members who are suffering a serious mental illness (insanity) may not be issued a party membership card while they are ill. When a party member who has already received a party membership card becomes insane, his membership card is not reclaimed; however, the basic party organization must remind his family to carefully protect his party membership card.

In addition, there are cases in which it is necessary to postpone the issuance of party membership cards in keeping with requests by party members and the masses; such cases must be decided by the party committee on the echelon directly above the installation at which the request is made.

TEMPORARY ORDINANCE ON RESTRICTED USE OF ELECTRICITY

Hanoi HANOI MOI in Vietnamese 7 Oct 81 p 3

[Article: "Temporary Regulations on Use of Electricity in Production and Daily Life --Issued As an Attachment to Decision 3848/QD/UB on 13 September 1981 of the Municipal People's Committee"]

[Text] Purpose and Meaning. Electricity is an important and strategic material supply greatly influencing many economic and cultural sectors, which serve daily life, maintain political security and social order and consolidate national defense. In recent years, electricity production and supply has increased but has not met the requirements of economic development, production and daily life. Moreover, arbitrary use of electricity still is widespread, causing wastes, including many instances of serious damage. The Premier issued Directive 241-TTg on 26 April 1978 on strict conservation of electricity in production and consumption.

Article 35 (Chapter II--Economic System) of the 1980 Constitution of the Vietnam Socialist Republic states, "Speculation, hoarding, illegal business, disturbing the market, sabotaging state plans, and embezzlement, theft, bribery, or irresponsible waste that seriously damages the state and the people's interests, are strictly punished by law."

This temporary ordinance regulates levels of use of electricity for production and daily life, and at the same time establishes prosecution procedures against violations while using electricity.

Chapter I. Use of Electricity in Production.

Article 1. All enterprises, worksites and small industry and handicraft cooperatives ...working one and two shifts are prohibited from using electricity during peak hours. In case they work three shifts and need electricity during peak hours, they must arrange to rationally operate machinery to avoid overuse.

Article 2. Production installations must strictly comply with the rotating rest system as prescribed in order to fully utilize electric network output.

Both overload and underload are prohibited.

Based on assigned production plans, they must set norms in KW/h for use of electricity in making each product in their own installation and must set norms in KW for use of electricity in each work shift.

Article 3. Water conservancy pumping stations must strictly comply with schedules of operation as prescribed from 2200 hours to 0600 hours and from 1000 hours to 1800 hours, and are prohibited from using electricity during peak hours (in the evening, from 1800 hours to 2200 hours).

Pumping stations using network electricity pumping water to fight drought or waterlogging will be accorded top priority in accordance with a unified plan between the Hanoi Water Conservancy and Electric Power Services.

Chapter II. Use of Electricity in Daily Life.

Article 4. Norms for use of electricity in daily life are set by Circular 20-DT/VPI of 14 June 1978 of the Ministry of Electricity and Coal.

Article 5. It is strictly prohibited at all times to divert electricity from main power lines for household uses, such as boiling water, cooking bran for hogs, making ice cream and ice, etc. (including workers, cadres and civil servants of the electricity sector).

Organs, stores and movie houses, etc., are prohibited from using electricity for decorative purposes without authorization of responsible organs.

Chapter III. Prosecution of Violations.

Article 6. Units and individuals overusing electricity or violating procedures and regulations, in addition to paying for the excess at accrued prices, must--depending on the gravity of the violations--be fined an amount of money equal to 2 to 10 times the value of electricity used in excess.

Article 7. Production installations violating regulations on work shifts, and rotating rest, or overusing electricity will be:

- 1st time: issued warnings
- 2nd time: fined from 50 to 200 dong
- 3rd time: fined up to 500 dong, subject to revocation of contracts on use of electricity and to having electricity cut off. Electric current will be reinstated after the production installation has applied for a new contract and pledged to properly comply with procedures and properly use electricity.

Article 8. Diverting electricity from main power lines will be fined from 50 dong to 200 dong. Recidivism will be tried by a court of law.

Use of electricity for illegal business production (making ice, ice cream, etc.) will lead to electricity cut off, confiscation of pieces of evidence and a maximum fine of 500 dong.

Instances of illegal use of electricity causing serious damage will be fined up to 5,000 dong and may be prosecuted in pursuance of current law.

Article 9. Collectives and individuals discovering and taking part in drawing up proceedings for dealing with violations will be given a reward equal to 5 to 10 percent of the fines collected.

Article 10. Cadres and workers of the electricity sector refusing to accept money or material supply given in bribe, will be given a reward equal to 50 percent of the money or of the value of material supply which has been confiscated, while the balance will go to the budget.

Chapter IV. Prosecution Powers.

Article 11. Precinct, district, ward and village people's committees coordinage with the public security and electricity sectors to control the prosecution of violations, and at the same time have the responsibility to confiscate and administer pieces of evidence.

Article 12. The Municipal Electric Power Service is responsible for cutting off electric current, collecting fines and carrying out the reward procedures as prescribed.

Chapter V. Execution Provisions.

Article 13. This temporary ordinance is effective from the day of its issuance until replaced by an official ordinance. Previous regulations contrary to this text are void.

Article 14. The Director of the Electric Power Service and other concerned sectors in Hanoi are responsible for guidance and implementation of this ordinance.

For the Hanoi Municipal People's Committee

Deputy Chairman

Nguyen Dong (signed)

ECONOMIC PLANNING, TRADE AND FINANCE

SHOPS SELL OUT GOODS TO EVADE CONTROL

Hanoi NHAN DAN in Vietnamese 3 Nov 81 p 2

[Article by "Nguoi Quan Ly" [Manager] in "Tales of Economic Management" Column: "How Regulations Are Forestalled"]

[Text] It is hard to understand why certain activities are carried out as if they were subjected to some law. Each time a merchandise inventory and a retail price adjustment are announced, the atmosphere inside all shops is marked by feverish commercial dealings prior to the moment these actions take effect. This state of affairs has occurred several times since the beginning of this year. Many shops continue to sell goods beyond the working hours and until the evening. Many orders ratifying the distribution of goods are signed and invoices pile up in thick stacks. The amount of money received by each shop is several times and, for some of them, even 10 times larger than on ordinary days.

Who are the buyers? Very few consumers are given such a "priority" unless they are employees and cadres of the shops and corporations or belong to the sector concerned and unless they are close relatives or acquaintances of these persons and have entertained relationships based on a two- or three-way exchange of goods.

What kinds of goods are sold? They are staple ones such as inner tubes, tires and parts for bicycles, desk fans, fabrics, readymade clothes, wooden items and even construction materials. Unfortunately, most of these goods quickly fall into the hands of traders in markets and streets and are subsequently resold at very high prices.

Even if an inspection takes place, these shops and corporations will have enough reasons to justify and "legalize" this method of selling merchandises to circumvent regulations. If they are at a loss to indicate the "truly rightful consumers," they will mention "buyers who deserve consideration" or will allege that it is necessary to "display flexibility by making up for the too low salary of the personnel" and so on.

In fact, this is a major trick which results in eroding the state fund reserved for merchandises, not to speak of the usual leakages. All in all, the losses are heavy.

Consumers request that the trade sector--the housekeeper of the entire society--manage the common stock of merchandises very strictly. This stock must be distributed in equity to the rightful recipients to meet the real requirements and must not be cut back by anyone. What must be immediately stamped out is the abovementioned stealing method which has been going on for so long!

PRICES OF PRODUCTION MATERIALS, GOODS TRANSPORT COST REDUCED

Hanoi NHAN DAN in Vietnamese 3 Nov 81 p 1

[Text] On 30 October 1981, the Chairman of the Council of Ministers issued a decision modifying the wholesale prices of certain production means and the rate of goods transport cost.

By virtue of Decision No 145-TTg of 5 July 1981 of the Premier of the Government on the wholesale prices of a number of staple materials and Decision No 177-CT of 29 September 1981 of the Chairman of the Council of Ministers promulgating the application of a new system of wholesale prices;

Following an exchange of views and unanimous agreement with the ministries concerned and after considering the need for an overall balance;

At the proposal of the Chairman of the State Price Commission, the Chairman of the Council of Ministers decides on the following:

A number of prices indicated in Decision No 145-TTg of 5 July 1981 of the Premier of the Government are modified as follows:

--Automobile transport cost is reduced by 30 percent.

--Sea transport cost is reduced by 30 percent.

--River transport cost is reduced by 25 percent.

--Railroad transport cost is reduced by 25 percent.

--A reduction of 20 percent is applied to [the price of] metals of all kinds.

--A reduction of 16 percent is applied to [the price of] round lumbers of Group 1, 2 and 3; of 23 percent to round lumbers of Group 4, 5 and 6; and of 32 percent to round lumbers of Group 7 and 8.

The new transport charges will be applied from 1 November 1981 and the new prices of metals and lumber from 1 October 1981.

On the basis of the abovementioned changes in prices and transport cost, the State Price Commission will be responsible for materializing and publishing the present decision and for guiding its implementation.

LOSSES SUSTAINED IN GRAIN, FOOD PURCHASE IN MINH HAI

Hanoi NHAN DAN in Vietnamese 2 Nov 81 p 2

[Article by Hoang Minh: "Grain and Food Purchase in Minh Hai"]

[Text] Minh Hai is one of the Mekong Delta provinces with the highest percentage of agricultural and maritime products. Over the past years, Minh Hai has scored great achievements in purchasing agricultural and maritime products and grasping their sources and has thus provided the central level with a noteworthy quantity of goods. However, economic management and especially grain and food purchase in the province still have shortcomings which must be promptly overcome by taking various measures aimed at reducing circulation expenditures and decreasing and compensating losses at a time when budget difficulties are still rampant. A concrete example is the fact that out of the total quantity of paddy purchased in 5 years (1976-1980), nearly 20,000 tons were lost, deteriorated and wasted. This does not include the paddy which was purchased at the beginning of 1981 and for which money has been paid but which has been stored in the people's houses and has not been collected by the end of September 1981. In a certain agricultural season, the quantity of wasted and lost paddy represented nearly 20 percent of that delivered into warehouses. In matters of cash, the purchase budget suffered a loss of hundreds of thousands of dong in only the first 5 months of 1981. Moreover, the money intended for paddy purchase has been used in capital construction and for other puposes. Due to these losses, the Minh Hai Grain Service has sustained a deficit every year.

Concerning the purchase of hogs, in only the first 6 months of 1981, 16 percent of the total number of hogs purchased was left to die or waste away. A number of merchants acting as purchase agents pumped 2 or 3 kg of fresh water into each hog before delivering it to food shops. On the other hand, when the purchasing task was in full swing, it was impossible to carry away all hogs so that a number of them were left starving in crowded sties when the climate was hot; in addition, hogs were squashed together during transportation trips. These were the causes of the death and wasting away of many hogs. Moreover, the Minh Hai Trade Service allowed the Minh Food Service to let out on contract the raising of Category 5 hogs (worth 400,000 dong in the first 6 months of the year) to cadres, workers and office employees in the sector; some of these persons' families brought hogs to their houses to raise them for a short while and then sold tham at the free market and spent the money. This represented a complete loss for the Food Service.

We suggest that the principal sectors concerned and the economic management organs--such as the control, banking and financial committees in various localities--intensify their control and inspection activities and that they help basic units implement the economic management system and strictly carry out Government Directive No 224/CP on the need to strengthen the management of money, credits and payments.

It is unadvisable to completely entrust the grain purchase to the trade sector. Under the leadership of party committees at different levels and of the local administration, organs and units must cooperate and create conditions to support the grain and food sector by supplying it with all kinds of materials and capital--such as cash, transportation means, gasoline, oil, packing bags and building materials used in setting up warehouses and shacks--so that grain and food services may satisfactorily carry out their purchasing task and prevent losses and waste of goods.

Prior to each purchasing phase, the trade sector must draw up a specific plan covering the volume of goods to be purchased, cash, materials required to set up shacks and warehouses and the need for transportation means including gasoline and oil and for domestic animals' immunization so that the sectors concerned may prepare materials and capital to adequately promote the purchase of grain and food. Whenever any locality is found incapable of properly preserving goods and quickly moving them at the same rate as the purchasing task, it is necessary to promptly ask for the central level's assistance instead of purchasing goods in mass and at all costs and allowing them to spill out to the detriment of the socialist property. It is necessary to severely deal with cases of corruption, misuse of goods and cash or violation of the economic management principle and system which cause loss of socialist property. The same measures must also be taken against any leading cadre directly concerned with grain and food purchase whose irresponsibility in guiding this task has led to heavy losses of cash and goods.

AGRICULTURE

MISUSE OF LAND IN RED RIVER DELTA

Hanoi NHAN DAN in Vietnamese 2 Nov 81 p 2

[Article by "Nguoi Quan Ly" [Manager]: "Shortage and Waste of Land"]

[Text] Because its dense population has been living on a narrow land--over 700 people per square kilometer--a certain province in the Red River delta is launching a movement to expand the arable land on the spot and to send out part of its population to build new economic zones.

However, land has been wasted even where it is lacking. Over the past 20 years, this province has expanded the arable land by 9,000 hectares against a reduction of 11,293 hectares and has increased the agricultural land by 2,400 hectares while suffering a decrease of 19,000 hectares. The various organs and army units which have borrowed 1,100 hectares of land for production purposes have usually achieved only a low productivity and a number of them have even asked cooperatives to cultivate this land in their stead. The 3,300 hectares lent to individuals have actually been scattered; these persons have either dug ponds to obtain earth to build pieces of land for themselves or sold or transferred the borrowed land to make a profit. Moreover, 11 percent of the arable land has been used in capital construction and 17 percent for the purposes of communications and water conservancy.

An inch of land is as precious as an inch of gold. The land in the Red River delta is all the more valuable. The wasteful use of scarce land is a reprehensible act. If the land is used contrary to law, it must be taken back.

HAIPHONG STATE FARMS MISUSE PRODUCTS, SUPPLIES

Hanoi NHAN DAN in Vietnamese 2 Nov 81 p 2

[Text] VNA--Over the recent past, many state-operated agricultural installations in Haiphong have failed to deliver products in sufficient quantities and have used products and materials of all kinds according to their own convenience and contrary to principles. This situation has affected production. In only the first 6 months of this year, state farms and stations removed 7,300 breeding hogs from their sties but delivered only 615 of them to the state while selling out the remainder--87 percent--in violation of principles. While failing to fulfill the plan norms for product delivery concerning ducks and geese, these installations sold to their own personnel and other agencies 5,700 ducks, more than 2,200 geese and 155,400 eggs--which was five time the quantity delivered to the state. In particular, the Vinh Quang state farm sold 121,650 eggs to its own personnel and to other customers on presentation of recommendation letters.

Many stations and state farms have loosely managed the essential supplies such as gasoline, oil, fertilizers, insecticides and feed for cattle and poultry and have even used them at their own convenience in violation of principles.

TRANSPORTATION AND COMMUNICATIONS

TONNAGE RATING USED IN CARGO SHIPMENTS

Hanoi NHAN DAN in Vietnamese 3 Nov 81 p 2

[Article by Minh Son: "Cargo Shipping According to Tonnage"]

[Text] Over the past few years, the volume of goods carried by river and sea transport means has continued to increase and has included an ever higher percentage of bulk cargo. Because of faulty management, the quantity of goods lost and wasted has average 10 percent and as much as 20 to 30 percent in some instances. In April 1981, nearly one-fifth of the 5,500 tons of rice and paddy transported to Dong Hoi by the Haiphong Ship was missing. Of the 105 tons of rice loaded into the SM51 Ship af the Bach Dang Enterprise on 17 May, 31 tons were found mission on arrival at the port.

One of the principal causes of these losses is the fact that the carrying capacity of transportation means has not yet been standardized according to a scientific calculation method; at the same time, because of the need to quickly move goods away and to transport large quantities of merchandises, it has been impossible for the shipping and receiving places to carry out weighing, measuring and counting. A number of sailors have taken advantage of these shortcomings to steal goods.

To help overcome the abovementioned situation and satisfactorily preserve goods, engineer Dinh Van Khai, director of the Registration and Control Department, and a number of cadres have been entrusted with studying a shipping method according to tonnage. They have visited enterprises which own transportation means and a number of installations which build ships, boats and barges, and have carried out on-the-spot research, redetermined freight carrying capacities and nearly exactly assessed the volume of goods which each transportation means can carry. The Registration and Control Department has also opened on-the-spot refresher courses to teach more than 100 warehouse keepers and shipping and receiving cadres how to calculate the volume of goods according to tonnage. Detailed instructions have been given concerning the entire process of managing goods and the method of calculating the volume of goods onboard ships and barges. Sailors involved in the transportation task have also been educated with a view to heightening their sense of responsibility for the preservation of goods according to the new calculation method. After all these measures had been taken, cargo shipping according to tonnage has been experimentally applied by several cargo ships plying along the Vinh Phu line and by eight other transportation means plying along the Haiphong, Thai Binh and Hanoi line. These ships have carried goods including rice, wheat flour and nitrate fertilizer from two different points--the Ho Cong warehouse and [the] Bach Dang [Port] where ships berth alongside each other. As a result, the rate of loss at the shipping and receiving points has been only 1 percent and as low as 0.5 percent for some ships.

If support is obtained from the sectors concerned and especially from the owners of transportation means, it will be possible to broadly apply the shipping method according to tonnage, thereby contributing to eliminating the former habit of roughly "estimating" the number of bags in the shipping and receiving process.

MOONSHINING TO BE STAMPED OUT IN LANG SON

Hanoi NHAN DAN in Vietnamese 2 Nov 81 p 2

[Article by Thanh Nha: "Stamp out Moonshining in Lang Son"]

[Text] The use of grain in alcohol distillation is almost open and not forbidden in Lang Son, especially in the mountainous districts. To date, a number of districts such as Trang Dinh and Loc Binh have distilled alcohol by using rice of various strains. In particular, in the two towns of That Khe and Loc Binh, from 5 to 6 quintals of husked rice are put up for sale on each market day for use in distilling alcohol. If there are six market days each month, these two towns will use more than 4 tons of rice, not to speak of other kinds of grain, to distill alcohol. On reckoning, we find that nearly 1,000 tons of grain are consumed each year in Lang Son to distill alcohol for use at weddings and funerals, on holidays and new year's days, during local festivals and conferences of provincial agencies at all levels and also on other occasions.

At a time when the grain situation in Lang Son is tense and when the entire country is faced with difficulties, the use of hundreds of tons of grain in alcohol distillation aggravates the economic imbalance in the province, let alone the consequences of alcohol distillation and consumption. Since the state has already issued a decree prohibiting moonshining, it is necessary for party committees at all levels and the administration in Lang Son to take all the necessary measures to soon check this reckless habit of distilling alcohol. Beside carrying out propaganda and persuasive education with the objective of stamping out the bad habit of distilling and drinking alcohol, it is necessary to take administrative measures against persons who deliberately run counter to the decree prohibiting moonshining. Party and state directives on weddings, funerals, festivals and wasteful parties held on the occasion of conferences and receptions must also be strictly implemented.

BIOGRAPHIC

INFORMATION ON VIETNAMESE PERSONALITIES

[The following information on Vietnamese personalities has been extracted from Vietnamese-language sources published in Hanoi, unless otherwise indicated. Asterisked job title indicates that this is the first known press reference to this individual functioning in this capacity.]

Phan Anh [PHAN ANH]

Vice chairman of the National Assembly; *Chairman of the Executive Committee of the Vietnamese delegation to the Inter-Parliamentary Union; on 30 Oct 81 he attended the departure of a National Assembly delegation leaving for Japan, (NHAN DAN 31 Oct 81 p 1)

Nguyễn Minh Cảnh [NGUYEENX MINH CANHR]

*Deputy Director of the Urban Projects Service, Hanoi; his letter accepting criticism for disorderly conditions in a Hanoi market appeared in the cited source. (DAI DOAN KET 28 Oct 81 p 10)

Trần Văn Cẩn [TRAANF VAWN CAANR]

Secretary General of the Vietnam Fine Arts Association; on 30 Oct 81 he presented gifts to artist whose works won prizes at the Tokyo International Art Exhibit. (QUAN DOI NHAN DAN 31 Oct 81 p 1)

Nguyễn Hữu Chỉnh [NGUYEENX HUWUX CHINHR]

*Vice Chairman of the Foreign Relations Committee of the National Assembly; on 30 Oct 81 he attended the departure of a National Assembly delegation on a visit to Japan. (NHAN DAN 31 Oct 81 p 1)

Huỳnh Chứ [HUYNHF CHUW], Deceased

Born in 1908; member of the VCP; former head of the Wood Products Processing Department, Ministry of Forestry. He was in retirement at the time of his death on 30 Oct 81. (NHAN DAN 31 Oct 81 p 4)

Võ Chi Công [VOX CHI COONG]

Member of the Political Bureau of the VCP Central Committee; Vice Chairman of the Council of Ministers; Chairman of the Vietnam Committee Organized To Commemorate the 1300th Anniversary of the Founding of the Bulgarian Nation; on 19 Oct 81 he headed a SRV delegation that visited Bulgaria to participate in activities marking Bulgaria's 1300th Anniversary. (NHAN DAN 28 Oct 81 p 1)

Nguyễn Đức Đàn [NGUYEENX DUWCS DANF]

*Acting editor in chief of the arts and letters research journal NGHIEN CUU NGHE THUAT; his name appeared on the masthead of the cited source. (NGHIEN CUU NGHE THAUT No 3, May-Jun 81 p 1)

Nguyễn Thị Định [NGUYEENX THIJ DINHJ]

Member of the VCP Central Committee; President of the Vietnam Women's Union on 8-13 Oct 81 she attended the Congress of the Democratic Women's Federation of the World in Prague where she was elected vice president of the Democratic Women's Federation of the World. (NHAN DAN 28 Oct 81 p 1)

Hoàng Minh Giám [HOANGF MINH GIAMS], Professor

Deputy Secretary General of the Vietnam Socialist Party; publisher of the Socialist Party journal TO QUOC; on 24 Oct 81 he attended a seminar in Hanoi on developments in education. (QUAN DOE NHAN DAN 26 Oct 81 p 1)

Song Hào [SONG HAOF]

Secretary of the VCP Central Committee; on 24 Oct 81 he departed the SRV to attend the Eighth Congress of the Albania Workers Party. (NHAN DAN 1 Nov 81 p 1)

Nguyễn Thị Hằng [NGUYEENX THIJ HAWNGF]

Secretary of the Central Committee of the Ho Chi Minh Communist Youth Union; *Head of the Inspection Department of the Central Committee of the Ho Chi Minh Communist Youth Union; on 20-24 Oct 81 she attended a conference on improving Youth Union inspection departments at the provincial level. (TIEN PHONG 27 Oct-2 Nov 81 p 2)

Lê Quang Hiệp [LEE QUANG HIEEPJ]

SRV ambassador to Bulgaria; on 24 Oct 81 he attended the departure of an SRV delegation, headed by VCP Political Bureau member Vo Chi Cong, that attended Bulgaria's 1300th Anniversary celebration. (NHAN DAN 28 Oct 81 p 1)

Nguyễn Đăng Khôi [NGUYEENX DAWNG KHOOI]

Editorial secretary of the biology review TAP CHI SINH VAT HOC; his name appeared on the masthead of that publication. (TAP CHI SINH VAT HOC No 3, Aug 81 inside front cover)

Nguyễn Văn Kỉnh [NGUYEENX VAWN HINHR], Deceased

Form member of the VCP Central Committee (2d and 3d session); former ambassador to the USSR; former secretary of the Party Fraction of Solidarity and Friendship Associations; former deputy head of the VCP Central Committee Foreign Relations Department; vice chairman of the Central Committee of the Vietnam-Soviet Friendship Association; president of the Vietnam Esparanto Association in Defense of Peace; he was born on 28 Feb 1916 at Saigon. In 1932 he was active in the secret student association of the VCP at Huynh Cong Phat School, Saigon; from 1935 to 1937 he participated in activities in Saigon, Rach Gia and Thu Dau Mot. In 1938 he became a member of the Indochina Communist Party. From 1938-1944 he operated secretly in the Cholon and Gia Dinh areas participating in the Nam Ky uprising of Sep 41. He was arrested and received a death sentence which was commuted to life imprisonment. In Apr 45 he was released from prison and participated in the Aug 45 revolution becoming Saigon Party Committee secretary, member of the Nam Ky party committee and participated in a leadership role in the Saigon and Nam Bo uprising against the French. On 6 Jan 46 he was elected to the National Assembly from Ha Tien Province. At the 2d Congress of the VCP he was elected an alternate member and chief of cabinet of the VCP for COSVN. From 1955 to 1974 he served as deputy chief of the VCP Central Committee Propaganda and Training Department, Ambassador to the USSR and secretary of VCP Fraction of Solidarity and Friendship organizations. The 3d VCP Congress in 1960 elected him a full member of the VCP Central Committee. From 1974-1978 he was deputy chief of the Foreign Relations Department of the VCP Central Committee. From 1969-1980 he was chairman and, since 1980, he was vice chairman of the Executive Committee of the Vietnam-Soviet Friendship Association. He died following a serious illness in Moscow on 26 Oct 81 at age 65. (NHAN DAN 30 Oct 81 p 1)

Nguỵ Nhứ Kontum [NGUYJ NHUW KONTUM]

President of Hanoi University; his article "Hanoi University's 25 Years of Building and Maturation" appeared in the cited source. (NHAN DAN 26 Oct 81 p 3)

Hai Liên [HAI LIEEN]

*Secretary of the VCP Committee, Thong Nhat District, Dong Nai Province; recently she attended a seminar on agricultural accomplishments in the Mekong River Delta area in 1981 (NHAN DAN 28 Oct 81 p 2)

Thái Văn Liên [THAIS VAWN LIEEN], *Colonel

Of the Binh Tri Thien Province Military Organization; his article on recruiting activities in his province appeared in the cited source. (QUAN DOI NHAN DAN 28 Oct 81 p 3)

Hà Thị Quế [HAF THIJ QUEES]

Member of the Central Committee of the VCP; vice chairman of the Control Commission of the VCP Central Committee; on 24 Oct 81 she attended the departure of a delegation for the Eighth Congress of the Albania Workers Party. (NHAN DAN 1 Nov 81 p 1)

Ngô Thượng Thạch [NGOO THUWOWNGJ THACHJ]

*Chairman of the Fatherland Front Committee, Bac Thai Province; recently he participated in a congress of the provincial fatherland front committee. (DAI DOAN KET 28 Oct 81 p 2)

Đặng Ngọc Thanh [DAWNGJ NGOCJ THANH]

Publisher of the biology review TAP CHI SINH VAT HOC; his name appeared on the masthead of that publication. (TAP CHI SINH VAT HOC No 3, Aug inside front cover)

Xuân Thủy [XUAAN THUYR]

Secretary of the VCP Central Committee; Vice chairman of the Council of State; chairman of the Executive Committee [president] of the Vietnam-Soviet Friendship Association; on 1 Nov 81 he attended a Soviet geological exhibit in Hanoi. (NHAN DAN 2 Nov 81 p 1)

Nguyễn Thuyết [NGUYEENX THUYEETS]

Member of the Secretariat of the Vietnam Confederaton of Trade Unions; on 14-23 Oct 81 he met with a delegation from the Japanese trade union organization SOHYO. (NHAN DAN 29 Oct 81 p 4)

Hồ Trúc [HOOF TRUCS]

Vice chairman of the Central Committee of the Ho Chi Minh Vanguard Youth Union; his article "Some Remarks on the Work of the Young Pioneers and Children Organization" appeared in the cited source. (VIETNAM YOUTH No 142, Jun 81 p 7)

Trần Danh Tuyên [TRAANF ZANH TUYEEN]

Deputy head of the Foreign Relations Department, VCP Central Committee; on 24 Oct 81 he attended the departure of a SRV delegation for the Eighth Congress of the Albania Workers Party. (NHAN DAN 1 Nov 81 p 1)

Sáu Tường [SAUS TUWOWNGF]

*Standing member of the VCP Committee, Ho Chi Minh City; recently he attended a seminar on agricultural accomplishments in the Mekong River delta area in 1981. (NHAN DAN 28 Oct 81 p 2)

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

MAJOR GENERAL HOANG PHUONG ON POLITICAL WORK IN ARMY TECHNICAL UNITS

Hanoi TAP CHI QUAN DOI NHAN DAN in Vietnamese No 9, Sep 81 and No 10, Oct 81

[Article by Major General Hoang Phuong: "A Number of Problems Regarding Party Work and Political Work in the Technical Branches"]

[Sep 81, pp 23-34]

[Text] The technical branches and services of the Vietnam People's Army are a component of the people's armed forces of the party. Therefore, these branches and services embody the general characteristics of a revolutionary armed organization; they are led by our party and possess a fine revolutionary nature; they have a tight organizational system and strict procedures regarding political activities in order to raise the level of political awareness and guide the thoughts and actions of cadres and soldiers so that they can complete every task in construction and combat, in work and productive labor well.

However, due to the function and position in combat operations coordinated among the various branches and services and due to the fact that they are equipped with modern weapons and technology, attention, in the buildup and employment of the various branches and services, must be given to the following characteristics:

1. The various branches and services are units that fulfill a combat and combat support function by means of relatively modern or modern technical equipment. Fully understanding this technical equipment, being proficient in its use and employing it in a manner in which it is coordinated with the other equipment of our people's armed forces are very important requirements of the various branches and services, requirements that must be met so that they can build themselves and win victory in combat.

2. The majority of the technical equipment of our branches and services (at some places, all of the technical equipment) has been received through assistance from the fraternal countries under conditions in which our country's economic capabilities are still limited and the cultural, scientific and technical levels of our cadres and soldiers are still low. Therefore, maintaining the equipment that we do have well so that it can be used for a long time is a constant requirement that must be scrupulously met so that we maintain a high level of combat readiness and win victory in combat without depleting our fighting strength.

3. Our enemy today, the Beijing expansionists, are collaborating with the U.S. imperialists, an enemy that has modern technical equipment, a developed scientific-technical system and a strong industry. They usually rely upon their modern technology and try to use modern technical equipment, which they have in large quantity and which is always being improved, to inflict the greatest possible losses on us. Therefore, in order to win victory over such an enemy by using our technical equipment and in view of the practical circumstances of our people and our country, we must, in a decisive struggle with the enemy, have cadres and soldiers who are tenacious and brave, resourceful and creative, possess noble revolutionary qualities, have the ability to be the masters of technical equipment and have the ability to organize actions well; at the same time, we must have a strong, very tight organization that is consistent with our conditions in every area.

The above mentioned characteristics are thoroughly understood in the leadership of the buildup and combat of the branches and services in our army. The party has guided the gradual building of the technical branches under circumstances involving many difficulties and shortages and has won a tremendous victory. The various branches and services, as noted by the Military Commission of the Party Central Committee, have grown rapidly and steadily, made an important contribution to the victory over the U.S. expeditionary army and the armies of their vassals and lackeys and the victory in the first round of the fight against the Chinese expansionist army. In the process of leading the buildup and the combat operations of the branches and services, the various party committee echelons, political cadres and agencies within the branches and services have gained much experience. This profound reality proves that the line of our party on building a regular-force, modern, revolutionary army is totally accurate.

Party work and political work within our branches and services have tried to thoroughly implement the principles of party work and political work of our army in the new stage as set forth by the Political General Department; at the same time, the persons performing this work have delved deeply into their functions, tasks and special characteristics in order to adopt specific, suitable requirements and methods of activity. As a result, they have been able to avoid working in a manner that is general in nature, superficial and ineffective.

I. The Basic Problems Which Party Work and Political Work in the Technical Branches Must Resolve

1. Teaching cadres and soldiers as well as the entire unit to meet basic requirements.

The cadres and soldiers of every technical branch must:

+ Possess a very high spirit of ownership so that they can successfully perform their tasks using the technical equipment they have, so that they can be the masters in the use and maintenance of this equipment and achieve the highest possible effectiveness with each weapon and means of war.

+ Possess a strict, self-imposed sense of organization and discipline, closely adhere to principles and carry out regulations in a thorough manner, not in a liberal manner, not in any manner they see fit.

+ Possess close unity and cooperation: the modern technical branches generally have a complicated, sophisticated structure, consequently, when employing these branches, they must meet high requirements regarding coordination and balance. Therefore, the use of technical equipment as well as coordinated combat operations demand that personnnel have a very high sense of unity and cooperation.

+ Possess the spirit of practicing frugality in building the country and building the army: the technical branches possess tremendous power but their equipment is expensive, difficult to manufacture and very costly to use (jet aircraft, missiles, mechanized artillery, tasks and so forth are much more expensive than infantry weapons). For this reason, practicing frugality is a quality of the revolutionary, one that must be even more fully and regularly expressed within the technical branches.

Cadres and political staffs must always keep these basic requirements in mind when performing their work. Under the leadership of the various party committee echelons and party chapters, it is necessary to teach, mobilize, organize and guide everyone in deeply studying, learning and applying the laws of the natural sciences, the laws of the social sciences and the laws of ideology.

Political work has the task of researching and building spiritual strength, of turning spiritual strength into material strength in order to win victory. We must constantly concern ourselves with teaching and organizing personnel so that they know and act in accordance with the three types of laws mentioned above. Therefore, it is necessary to correctly evaluate the persons that one must teach and the organization that one must build and necessary, on the basis of the fundamental requirements stated above, to examine the gap between requirements and the present level of development of personnel and the organization. This is a practical basis for establishing a specific leadership plan.

2. Knowing the persons that one must lead and teach.

In the various branches, the various party committee echelons must lead many different forces: the forces that directly utilize technical equipment in the performance of combat tasks, the material and technical support forces (maintenance, repair, supply and so forth), the technical research forces, the command forces and so forth. The base of operation of each force is also different: combat units, combat support units, agencies, schools, warehouses, factories and so forth. The mode of operation of the technical branches is sometimes centralized, sometimes decentralized (these forces are sometimes decentralized into very small, widely scattered forces); sometimes they fight independently and, at other times, they coordinate with the other services and branches and fight within combined branch formations. Our technical branches possess some equipment that is very heavy and large and which has a complex structure, consequently, this equipment must be maintained very thoroughly. Our mode of employing this equipment demands that we be skillful, that we be mobile even though our roads pose difficulties and we are experiencing a shortage of mechanized means.

Under such conditions, our personnel and organization in the various branches must achieve a high level of development in every respect before they can fulfill their task of winning victory over the enemy. We have many types of modern equipment. To build a regular force, modern, revolutionary army we must have modern personnel. Modern personnel must, above everything else, be revolutionary personnel who live and fight for revolutionary ideals, communist ideals; they must possess revolutionary qualities and have a firm grasp of the viewpoints of the party; at the same time, they must possess deep knowledge of culture, science and technology and be skilled so that they can perform their duties well. These personnel must also have a strict, self-imposed sense of discipline that is specifically manifested in complying with the orders and directives of the organization and the upper echelon as well as in obeying the regulations and rules contained within orders and statutes; they must possess an urgent, precise, meticulous and specific style, possess a high spirit of vigilance and know how to maintain technical secrets and the secrets of the army and the state. All of these requirements of personnel are very necessary prerequisites to becoming the masters of technical weapons and proficiently using them in order to hit and win victory over every enemy.

Our cadres and soldiers in the various branches and services are persons of the socialist system who possess many very basic strengths, such as a thoroughly revolutionary spirit, absolute loyalty to the party and the people, the spirit of overcoming difficulties and enduring hardships, a readiness to sacrifice their lives for the revolution, absolute confidence in the correct line and talented leadership of our party, a profound love of Uncle Ho and the leaders of the party and state and intense hatred of national enemies and class enemies. Our cadres and soldiers have been continuously forged in the armed struggle and have gained much valuable experience. In the buildup and combat operations of the branches and services since their establishment and in the face of very obstinate, very crafty and cruel enemies possessing tremendous economic and military might and a developed scientific and technical system, our cadres and soldiers, under the leadership and with the education provided by the party, have shown themselves to be steadfast revolutionaries who possess high political qualities and are highly capable of being the masters of modern technical equipment. As a result, they have made many innovations, helped to establish many very unique methods of fighting for their branch or service, enriched Vietnamese military art, a creative, revolutionary military art, defeated the number one imperialists, U.S. imperialism, and won victory in the first round over the Beijing expansionists.

However, compared to the requirements of modern revolutionary personnel in the technical branches as well as to the very high demands of a people's war to protect the fatherland under the conditions of increasingly modern development, as is the case today, we are still hampered by certain limitations, such as the following:

--At some times and places, our understanding of the position and role of technology is incorrect, consequently, we fail to delve deeply into technology, hold a simplistic attitude regarding technology or only emphasize technology, only rely upon technology without correctly understanding the decisive role played by man.

--Training to provide knowledge in technical equipment, to achieve proficiency in its use, to maintain it carefully and so forth has not become universal among the masses in the various branches, consequently, there are still many cases in which equipment is used in a random manner, used carelessly, thus causing the equipment to break and causing accidents; there have also been cases in which the opportunity for winning victory has been lost or losses have been suffered.

--The discipline displayed in complying with rules and regulations on the maintenance, use, management and so forth of equipment is poor and has significantly affected the effort to maintain and constantly increase our fighting strength and significantly affected combat coordination. As a result, the strength of the technical equipment that we do have is not being appropriately utilized.

--The style being displayed is one of slowness and a lack of urgency and decisiveness. There is much work to do but, as a result of not conducting detailed research, not adopting a plan or only adopting a general, simple plan, not establishing coordination and not providing unified management, the efficiency of work is still low at many times and places. Some jobs are still being performed slowly. At times, the situation has not been assessed promptly, fully or accurately.

In the recent past, in keeping with the resolution of the Military Commission of the Party Central Committee and the directive of the Political General Department concerning improving the overall quality of the army, the various party committee echelons and party chapters as well as the political cadres and agencies within the various branches have focused many efforts on molding modern persons in keeping with the effort to build a conventional and modern revolutionary army. Experience has shown this to be an arduous struggle which the various party committee echelons must closely and constantly lead and in which party work and political work must be performed continuous. Because, this is a struggle to raise persons from the level of small-scale production to the level of fully understanding and being the masters of science, technology and modern equipment; this is an inevitable step in molding new socialists within the technical branches of a regular force, modern, revolutionary army.

As we know, only when people are strong can an organization be strong; however, an organization must be strong in order to train strong people. Therefore, in the relationship between personnel and organization, organization always plays the decisive role. For this reason, we must focus our efforts on building our organizations, from the party organization and command organization to the mass organizations within the branches, so that they are truly strong.

To accomplish this, it is necessary to attach importance to regularly building and strengthening the organization so that it is always streamlined and never cumbersome; fully and scrupulously fulfill stipulated duties and act in a way consistent with the nature and requirements of the task of the branch; implement on a regular basis all work regulations, such as situation assessment regulations, unit management regulations, material and technical base management regulations, reporting regulations and so forth, not implementing them in a liberal manner, in any manner seen fit; organize implementation in a planned and detailed manner involving a division of labor and coordination within each agency and sector and among the various sectors; promptly gain experience and regularly conduct reviews of high quality.

Some newly established units have immediately been assigned combat tasks. Therefore, they have had to build themselves up while fighting under very urgent combat conditions; full importance must be attached to making time to train cadres, rapidly correcting their weaknesses and constantly improving the ability of cadres to organize the performance of every job, thereby creating increasingly high work efficiency.

Our party work, our political work must reflect a full understanding of the situation surrounding the various types of persons mentioned above so that we can adopt specific requirements and methods consistent with one's branch with a view toward molding strong persons and building a strong organization in order to meet the basic requirements set forth by the various branches.

3. Thoroughly understanding the basic tasks, the basic contents and the basic methods of party work and political work and applying them in a manner consistent with the situation and tasks of the various branches and services.

The Political General Department has established the basic tasks of party work and political work within our army as insuring that the army is always loyal to the revolution, uniting every cadre and soldier around the party and the government, molding steadfast revolutionaries, building a strong, solid organization and increasing the fighting strength of the army so that it can successfully complete every task.

In order to perform these basic tasks, party work and political work must successfully carry out the fundamentals of political and ideological education and organizational work of the party within the army.

The basic method employed in political work is revolutionary mobilization, that is, progressing from molding awareness to remolding thinking and guiding revolutionary actions by means of propaganda and explanation, awareness and persuasion, by means of launching and organizing revolutionary movements.

All of the above mentioned basic matters regarding the tasks, contents and methods of party work and political work must be scrupulously and thoroughly implemented because they are matters of general principle. However, in order to scrupulously and thoroughly implement these fundamentals, we must always take the initiative and apply them in a manner consistent with the characteristics of the technical branch. We must delve deeply into understanding the ability of personnel to grasp the requirements regarding the use of the technical equipment of the unit, which include the specific requirements regarding their cultural level, their knowledge of the properties and function of equipment and their level of technical proficiency; requirements regarding their sense of complying with rules and regulations in the use and maintenance of equipment; requirements regarding their fighting morale when using modern technical equipment; national defense requirements; requirements regarding their sense of vigilance and the security of secrets; requirements regarding material and technical support, etc. They must not only know the requirements involved when using each separate weapon and piece of equipment, but also know the requirements involved when using many different types from many different units, which include tactical requirements, the requirements involved in coordination, in mobility, etc. Only by delving deeply into detailed study to learn this technology and, on this basis, learn the antagonisms between the modern level of development of personnel and the organization and the requirements involved in the use of technology in order to win victory over the enemy is it possible to flexibly apply the fundamentals of party work and political work within the technical branches.

The purpose of political cadres and staffs delving into technology and specialized fields is to perform good political work, to insure that political work fulfills its task of molding strong persons and building a strong organization that are fully qualified in every respect in order to win victory over the enemy using the technical equipment they have. For this reason, while delving deeply into technology and specialized fields, political cadres and agencies must fully concern themselves with the following jobs:

--Propagandizing and thoroughly explaining the viewpoints and line of the party, uncovering problems regarding viewpoints and thinking in the buildup of the unit and the utilization of technology and specialized equipment and guiding everyone and every organization in complying with the ideological line and viewpoints of the party;

--Molding revolutionary character and establishing methods of operation that are consistent with the special requirements of the technical branch or specialized sector;

--Mobilizing and inspiring everyone to make every effort to study, conduct research and firmly grasp technology and develop science and technology;

--Guiding the political agencies and mass organizations in conducting activities that are consistent with the functions, living conditions and combat operations of the technical branch.

It is necessary to avoid the phenomenon of not delving deeply into the various technical and specialized activities in order to perform party work and political work; as a result of this phenomenon, party work and political work become general in nature and have no force. At the same time, we must avoid delving into technology but assuming the work of the military commander, of the technical cadre, as a result of which we abandon the position and duties of the political cadre, create disorganization and sometimes impede each other's work, thus sometimes causing a lack of unity.

II. The Teaching of Politics and Ideology

1. The primary factors.

On the basis of fully understanding the fundamentals common to the entire army, such as revolutionary ideals, the revolution line and tasks, will and determination, boundless loyalty to the party and the people and so forth, in order to teach cadres and soldiers to fulfill their duties, importance must be attached to the following specific factors:

a) It is necessary to clearly understand the function and main characteristics of the branch and the requirements which everyone within the branch is responsible for fully meeting. It is necessary to teach and build the spirit of love of one's branch and contentment with one's work and mobilize everyone to deeply study his branch.

b) Making every effort to provide regular training in order to raise the political level, the ideological level and the command of technology and use weapons in a proficient manner that complies with the viewpoint of the party in order to build up the unit, support combat operations and fight victoriously while attaching importance to building the movement to make innovations and combating the thinking of being afraid to study, being too lazy to train and being satisfied with one's present level of development.

c) It is necessary to heighten the sense of organization and self-imposed discipline, which must be expressed by constantly and scrupulously complying with every rule, regulation and order when training or studying as well as in combat, when participating in collective life as well as when working alone. A high sense of organization and discipline is one of the basic prerequisites to a unity of will and actions and close combat coordination; the purpose of a high sense of organization and discipline is to achieve the greatest possible strength at the most favorable opportunities and attack the best target for winning victory in a campaign and in combat. It is also the basis for maintaining technical equipment well and maintaining the absolute safety of personnel and technical equipment in training and in mobile operations. It is necessary to combat undisciplined liberal behavior and the habit of acting on the basis of personal preferences.

d) It is necessary to have a firm grasp of the fundamental viewpoints of the party, such as the class and class struggle viewpoint, the collective ownership viewpoint, the practical viewpoint, the viewpoint concerning the practice of frugality, the mass viewpoint and so forth, in order to correctly establish the relationships between personnel and weapons, between politics and technology, between ideology and organization, between thinking and acting, etc. It is necessary to oppose the purely technical or specialized point of view, oppose the naive attitude of having disdain for technology and oppose the reckless, careless use of technology.

e) It is necessary to practice economy with and protect public property, protect the equipment and every piece of property of the army and state. It is necessary to combat the waste and theft of public property, the sabotaging of material and technical equipment of the unit and a lack of responsibility in the maintenance of weapons and other types of equipment.

f) It is necessary to display a high spirit of revolutionary consciousness, extraordinary bravery and close unity in the face of difficulties and dangers. This requirement is the result of the nature of technical work, of our use of modern technical equipment to win victory over an enemy that is technically strong. A high degree of consciousness, bravery and the spirit of close unity must be regularly and continuously forged and must be expressed in every daily job, such as by submitting accurate reports, correctly reflecting the situation, practicing sincere self-criticism and criticism, and arranging for others to work under favorable conditions while accepting difficult conditions for oneself. We must be determined to implement a coordinated plan, overcome every difficulty and be ready to sacrifice ourselves in order to successfully complete every task, protect one's weapons and equipment and fully implement the guideline of taking the initiative in attacking and annihilating the enemy with "every person, every piece of armor, every piece of artillery and so forth being determined to complete the task." It is necessary to combat the fear of difficulties, the fear of hardships, combat irresponsibility and vacillation in the face of difficulties and dangers and combat the habits of competing with others for achievements, blaming others, jealously, partialism and departmentalism.

g) It is necessary to fully comprehend the military line, viewpoints and thinking of the party in a people's war to protect the fatherland and to apply them in the buildup and combat of the branch. Everyone within the branch, most importantly the corps of cadres and party members, must be mobilized to study and improve their qualifications in every respect in order to become the masters of military science and art, constantly develop and create military science and art, use technical weapons and equipment proficiently and maintain them very well, thereby helping to improve the overall quality of the army, achieve high combat efficiency and achieve high campaign results.

It is necessary to combat any thinking or actions that are mechanical in nature and combat the unwillingness to conduct detailed research in order to flexibly apply the military line, viewpoints and thinking of the party in a manner consistent with the nature and characteristics of each branch. In order to apply them correctly, full importance must be attached to gaining experience; the effort to learn from experience must be closely guided in order to insure that it is of high quality and is regularly carried out.

2. The methods of teaching politics and ideology.

The objects of education and leadership are persons and organizations that come into contact with science and technology on a daily basis. Although their levels differ, the knowledge that cadres and soldiers have of the technical sciences and the social sciences as a result of being forged in combat, as a result of practical application in combat is gradually broadened. Therefore, many favorable conditions exist with regard to ideological activities directed toward these persons, for example, they learn well, engage in deep research, have a certain knowledge of science and so forth. However, ideological work must also be carried out in a scientific manner on the basis of fully understanding the laws of thinking in order to understand and analyze thinking, mold revolutionary thinking, correct thinking that is wrong and guide the ideological struggle in a sensitive and effective manner. For this reason, ideological work must involve all three factors: theory, militancy and guidance. It is necessary to fully understand and flexibly implement the basic methods of ideological work, such as the following:

a) Combining basic education with education concerning the immediate tasks.

This is a very accurate method. The basic subjects in the teaching of politics and ideology, such as the teaching of Marxism-Leninism, the teaching of the political line and tasks and the military line and tasks of the party in order to raise the level of political awareness and class awareness, mold ideals and establish combat objectives, teaching about the situation and tasks, the teaching of character and tradition and so forth, have the practical effect of molding the political skills of the cadres and soldiers in the technical branches. This basic education gives everyone a precise motive for fighting, correct methods of acting in order to delve deeply into the technical sciences in a bold manner and a strong will and energy in order to forge themselves, engage in research, make innovations and discover methods of utilizing technology that are consistent with our capabilities and actual conditions in order to win victory over the enemy.

However, basic education must be combined with education concerning the tasks at hand. Basic education must be used as the source of strength whereby cadres and soldiers gain a clear understanding of immediate tasks and complete them well. When teaching about any immediate task, it is necessary to raise ths student's command of basic theory through the subjects being taught. At the same time, the completion of immediate tasks must be used to further strengthen the results of basic education, further strengthen basic skills. Thus, the process of working and fighting is the process of utilizing and improving basic skills; at the same time, it is also the process of helping to implement the line of the party by means of completing specific, immediate tasks. This is a very important matter of great practical significance to which attention must be given in the teaching of politics and ideology in order to guide everyone in successfully performing these tasks. Because, the purpose of talking about being loyal to the revolution, about possessing a high level of political awareness is to successfully complete immediate tasks, to correctly and fully discharge one's duties. Only in this way does the teaching of politics and ideology have meaning, have a practical effect and only in this way does the study of politics and ideology benefit the revolution.

b) Molding thinking.

Teaching politics and ideology is a revolutionary campaign, the purpose of which is to raise the level of political awareness and transform and mold thinking. It is the process of struggle between that which is right and that which is wrong, between the desire to make progress and backward thinking. For this reason, it is necessary to mold thinking, to encourage everyone to clearly state his private thoughts, his attitudes and true thinking and necessary, on this basis, to discuss his thinking and differentiate between right and wrong so that positive factors are strongly developed and erroneous, backward outlooks and thinking are eradicated. The ideological struggle, the cultivation of oneself politically and ideologically must be carried out by the masses themselves with each person making his own effort under the leadership of the party organization.

Our party has achieved major success in leading all the people and the entire army in winning very large victories for the revolution. One of the reasons for this success is the fact that the party molded the thinking of all the people and the entire army so that everyone clearly understands and follows the revolutionary line of the party. In the buildup of the various branches, the method of molding thinking in order to raise the political awareness of soldiers is a necessary, correct and very powerful method. In the technical and natural sciences and in the social sciences as well as in the teaching of politics and ideology, in order to clearly understand and correctly deal with problems, it is necessary to fully understand the objective laws of these fields and the relationship among these various fields and necessary to scientifically establish these relationships. It is necessary to firmly grasp the essence of problems, detect and organize ways to resolve antagonisms, mobilize and struggle by means of every available strength and the highest possible subjective effort and successfully carry out the measures established for resolving antagonisms in order to complete the task at hand.

Molding thinking is "appealing to the positive factors in man (patriotism, the love of socialism, class consciousness, hatred of the enemy and so forth) so that these positive factors, even if they are small in number, blossom into strength and become the moving force behind determined revolutionary actions and overpower and eventually sweep away decadent, negative thoughts and actions. It is necessary to appeal to self-consciousness and self-respect in order to achieve a full understanding of and strict compliance with the revolutionary line and tasks of the party. We must encourage cadres and soldiers to use their will to fight and their revolutionary energies in order to make progress instead of standing still, instead of folding their hands in the face of difficulties and dangers. To accomplish this, we must display true freedom of thinking. We must trust that the masses, trust that our cadres possess good consciousness, have the ability to accept the truth and know how to forge and cultivate themselves in order to complete their tasks. The way to mold thinking is to lead the masses, to appeal to them to think, to discuss matters with the collective in order to differentiate between right and wrong, determine what should be done and what should be avoided and become resolved to do that which is correct and good.

We must oppose the vague style of teaching in which knowledge is merely handed down from above, crude criticism is practiced and sweeping attacks are made, which leads to limiting the freedom of thought and fails to uncover the true thinking, the correct and incorrect attitudes of the masses.

c) Combining general leadership and close guidance.

Within every technical branch there are many sectors and many different types of personnel to be educated: cadres, party members, the masses, leadership forces, command forces, technical research forces, combat forces, production and repair forces, storage and allocation forces, transportation and support forces and so forth.

Because the tasks, duties, environment in which they operate, level of development and so forth of these personnel differ, the teaching of politcs and ideology to them must be organized in a detailed manner providing basic knowledge to all personnel while teaching specific, suitable knowledge to each type. It is necessary to provide specific guidance and teach knowledge regarding the political and ideological qualities within each sector and for each different type of personnel. Methods must be employed that are consistent with each type of personnel under the different conditions that exist. For example, in an anti-aircraft artillery soldier, the spirit of bravery must be in manning his combat position and "aiming directly at the enemy and firing"; in the driver, it must be expressed in the actions of pulling artillery or safely transporting cargo to its destination and by the stipulated route on time despite heavy enemy attacks; in the mechanic, in performing skillful repair work when under heavy enemy attack, during the day or at night, when faced with difficulties or hardships and so forth.

In the various branches, every component, every job is part of a general, well coordinated and balanced apparatus in order to help insure victory in combat; no component can be lacking. Therefore, the teaching of politics and ideology is of equal importance in all components and jobs, even though, at certain times, one component or another might be performing specific jobs of more pressing importance. Consequently, if we do not delve into technology, do not clearly grasp the essence of the task of each sector, we cannot understand nor set forth specific requirements regarding politics and ideology. As a result, ideological work will be general in nature and not have the strength to lead and teach.

On the basis of fully understanding the line and tasks of the party, the task of the unit and the principles, requirements and basic methods of the teaching of politics and ideology, we must delve deeply into technology and closely observe the various activities of the unit, such as political activities, military training, scientific research, repair work, storage operations, the improvement of technology and the care shown for the living conditions of troops, in order to provide ideological leadership and build the spirit of emulating to overcome difficulties, make innovations, forge personal qualities, maintain materials and technical equipment well, etc.

d) Combining education with propaganda.

The teaching of politics and ideology must exhibit both breadth and depth. Primary emphasis must be placed upon encouraging everyone to make an effort to forge and cultivate the necessary qualities; at the same time, however, we must establish mutual support among personnel in order to create additional conditions and additional strength for each to make the required effort. Therefore, we must closely combine education with propaganda. In the various branches, the work involved in studying and in combat is work of a very urgent nature. The use of modern equipment requires much time for maintenance and repair work and raises many complex problems in the process of delving into and learning specialized technology, learning about weapons and equipment. In this situation, in order to meet the requirement of providing regular ideological leadership and education, it is necessary to employ many measures in ideological work. Propaganda is a very important, very effective broad form of education, if it is correctly and closely guided. Importance must be attached to employing many propaganda measures that involve direct observation and create lasting impressions; to using images, data and drawings to supplement report sessions; to improving the quality of political and ideological activity sessions; to the activities at clubs, libraries, etc. It is necessary to establish and regularly maintain the practice of praising and strongly inspiring good persons and good work, appropriately criticizing decadent thoughts and actions, violations of the revolutionary nature of the army and so forth. Importance must be attached to guiding propaganda activities in the basic units, guiding the effort to mold good public opinion, guiding the movement to respond to positive actions, struggle against incorrect actions and so forth.

In order to combine education with propaganda, it is necessary for the party chapter committee (party chapter) and the political agency to provide unified guidance and necessary to establish close coordination between the political agency and the other sectors in order to keep abreast of the requirements of the task during each period, the achievements in work and combat and the main strengths and shortcomings of the unit.

these are the prerequisite and the foundation for adopting a propaganda and education plan and a plan for combining education with propaganda.

e) Combining the effort to resolve problems regarding thinking with the effort to resolve problems regarding organization.

The teaching of politics and ideology has the objective of raising the level of political awareness and the revolutionary awareness of the masses and developing within everyone an invincible spiritual strength with which to take determined actions for the revolution. Vanguard actions are only the result of vanguard thinking. However, only through practical actions, through dealing with difficulties and dangers in order to win victory and achieve the objectives of the revolution is it possible to inspect the level of revolutionary awareness, possible to measure the strength of ideology and spirit. In the process of these practical actions, we must always achieve the combined strength of thinking, organization, available equipment and materials, etc. In the teaching of politics and ideology in the various branches, it is even more necessary to attach importance to combining the effort to resolve problems regarding thinking with the effort to resolve problems regarding organization, as this is the only way to have a practical impact in ideological work as well as in the completion of the unit's task. This is because, in order to complete their task, the cadres and soldiers within the various branches must not only possess a tenacious will, but must also be thoroughly organized and have a certain amount of material and technical support. By resolving problems regarding organization, in general, as well as permitted by conditions, the spiritual and ideological factors play an even stronger role in the completion of tasks and, as a result, are strengthened and heightened even more.

/Text/ Organizational Work

On the basis of thoroughly understanding the political line, the military line and the working class line in the organizational work of the party and the basic principles and requirements of organizational work within the army, those who perform organizational work within the various branches must have a firm grasp of the function and special characteristics of their branch in order to build the party well and build the mass organizations and the political agency.

1. Building and strengthening the party committee echelons.

The party committee echelon of a technical branch is the echelon that has the task of leading the buildup and the combat operations of a technical branch. For this reason, it is necessary to build the party committee echelon so that it is qualified in every respect to lead the personnel and the organization of the branch in successfully completing every task; these qualifications must be expressed in two areas:

--The ability to lead combat and combat support operations employing technical equipment and the ability to lead the research, development and implementation of the art of combat coordination among the various branches and independent combat operations by one's branch;

--The ability to lead the work of maintaining and managing technical weapons and equipment well and leading the research and development of the technical sciences in order to win victory over the enemy.

In the work of building the party and strengthening the party committee echelons, efforts must be focused on the following important jobs:

a) Providing advanced training to party committee members as well as the collective of the party committee. Party committee members must have a correct understanding of the position and role of the technical branch, the responsibilities of the party committee echelon and the requirements and methods involved in leading a technical unit; they must have a grasp of the natural sciences and the social sciences, provide good management and skillfully utilize technical equipment and weapons in accordance with the line and viewpoints of the party. The leadership of the work of forging the unit, the advanced training of cadres and agencies and the training of soldiers in technology, tactics, specialized fields, discipline and style must be researched in detail and carried out by means of thorough measures; they cannot be carried out in a general, simple or superficial manner.

b) Fully understanding and skillfully applying the principle of the party committee providing collective leadership and the commander organizing implementation.

--The party committee discusses and gains a thorough understanding of the tasks and the resolutions, directives and orders of the upper echelon; debates and issues resolutions, policies and measures for performing the task assigned by the upper echelon and the jobs that must be performed; discusses the specifics involved in providing ideological leadership to and guiding the lower echelon, deploying and utilizing forces (cadres, units, equipment and so forth). It puts members of the standing committee in charge when important, unexpected tasks arise. It sets forth regulations regarding inspections, the assessment of the situation and so forth.

--After a resolution has been issued by the party committee, the standing committee discusses a plan for disseminating the resolution, guiding its implementation and observing and supervising its execution.

The commander is the person who organizes the implementation of every order from the commander on the upper echelon, the resolutions of the party committee on his echelon and the directives and guidance of the agencies on the upper echelon (internal order 1980).

The commander must control and guide his staff in order to formulate specific plans for performing stipulated tasks. In guiding the formulation of plans, it is necessary to discuss and gain a full understanding of tasks; fully assess the situation surrounding units, agencies and the various types of personnel (with attention to assessing the situation surrounding material-technical bases); define the specifics involved in the jobs that must be performed gradually and the requirements that must be met; set forth methods for implementing these specifics; clearly state the forces that will be used and the deadlines by which jobs must be completed; clearly state the requirements of educational work, of the mobilization and training of cadres, of material-technical support and of the plan for inspections in the process of implementation, gain experience, evaluate results and make general observations.

c) It is necessary to provide regular, close leadership of basic units, cadres and the agencies on the various echelons. The party committee echelon and party chapter must not fail to provide leadership of the basic unit and agency in the performance of any task or at any time. Every party member must display a high spirit of responsibility and actively participate in the collective leadership of the party chapter (or party committee echelon). In the face of every task and at all times, it is necessary to assign tasks, put party members in charge of the masses and thoroughly implement work rules and regulations. Without close leadership, it is easy for loopholes to develop, weapons to be damaged or lost, accidents to occur and tasks to not be completed.

The party committees of the agencies on the various echelons must also have a full understanding of the functions of the technical branch, delve deeply into their technology, lead the agency in gaining a full understanding of the line and viewpoints of the party, learning the equipment in the unit's table of organization and equipment, learning the laws of the natural sciences and the social sciences, learning the laws of thinking that apply when using technology and so forth in order to fulfill their duties in a specific, effective manner that is consistent with the unit, not in a general, vague manner.

2. Building the party chapters.

Building the party chapters is a very important factor, a factor of decisive significance in the growth and victory of the army. In the technical branches, this significance is even more clearly evident because, in the final analysis, the learning and the use of technology are carried out on the company level. Whether or not each cadre and soldier meets requirements, such as possessing a high spirit of ownership, possessing strict, self-imposed discipline, uniting and cooperating closely with others, practicing frugality in the buildup and combat operations of his unit and so forth depends upon the leadership of the party chapter.

Generally speaking, as soon as the various technical branches were established, very much attention was given to building party chapters; the percentage of party members in the technical branches is usually higher than in infantry units. This is a major advantage. Qualitatively, all of the party chapters have the trust of the masses and have led the masses in fully implementing the resolutions of the party and successfully completing tasks in combat and the buildup of units. However, in the face of the requirement of improving the overall quality of the leadership provided by the various organizations of the party on the basic level, the party chapters in the technical branches must still make every effort to be strong in every respect and at all times, not simply be strong in a specific task or job, in a specific area or at a specific time or only be strong when a favorable situation exists and is developing as predicted and displaying confusion when difficulties and complications arise.

The quality of leadership of the party chapter is determined by the quality of party members, the leaders of the party cells, the party chapter committee and the party chapter secretary. All members of the party chapter must actively participate in the collective leadership of the party chapter through the position that they hold. In the technical branches, the company units have complex technical equipment, sometimes very many types, consequently, maintenance, use and coordination are very complicated and demand very detailed, concrete, close and constant leadership on the part of the party chapter. If the party chapter does not highly mobilize the political responsibility of each party member, the leadership of the party chapter will lack force. Therefore, in order to improve the quality of leadership of the party chapter, it is necessary to train party members, party cell leaders, party chapter committee members and party chapter secretaries while always being concerned with developing the party well.

a) Teaching and forging party members.

The party members in the technical branches must be educated in many areas so that they truly are persons who know how to lead the masses in struggle, possess the spirit and the ability to be the masters of technology, patiently forge themselves, possess a high sense of self-imposed discipline, unite and cooperate closely with others and know how to practice frugality in the buildup of the unit. For this reason, every party member must first fulfill his duties well and be skilled in leadership. This leadership skill originates in knowledge of Marxism-Leninism; in class awareness; in thorough knowledge of the work involved in mobilizing the masses and of party chapter work; in a full understanding of one's duties; and in thorough knowledge of the weapons and technical equipment of the unit. The party member must always set examples in his work, studies, daily life and combat and his work methods and style must be both revolutionary and scientific.

In order to organize the teaching of party members and the study performed by party members well, importance must be attached to providing two factors: teaching materials and instructors. It is necessary to organize the research and compilation of materials that are consistent with the level of development of party members on the basic level. At the same time, the political agency of the division or regiment must immediately select comrades within the various party chapters who learn well and are able to teach others what they learn for training as instructors for their party chapter. Organizing assistant instructors and maintaining study systems have a very good effect.

b) Training party cell leaders.

In the technical branches, the party cell plays a very important role. The organizational structures, staffs and equipment of the basic units are complex and different. When being used, these units must be coordinated; in combat, they are usually deployed in a decentralized formation or have many different components that operate independently (such as artillery observer stations, signal teams, technical repair teams and so forth). For this reason, the party cell must possess strong leadership ability, the activities of the party cell must be of high quality and the leaders of party cells must possess comprehensive abilities and qualities. The requirements of the leaders of the party cells in the technical branches are: they must possess firm political and ideological qualifications and firm viewpoints; fully understand the tasks and resolutions of the party chapter; possess a tenacious will to fight in order to always, together with the party cell, lead the detachment in successfully completing tasks; have the ability to guide the party cell in gaining a thorough understanding of tasks and being determined to forge themselves and scrupulously comply with the resolutions of the party chapter; and possess a good spirit of unity and discipline. Party cell leaders must be the persons who are most familiar with the technical equipment within the detachment, who are able to guide party members in leading the masses well and maintaining and using equipment well in order to complete tasks well, who set good examples and who proficiently fulfill their governmental duties and the tasks of the party member.

In the training of party cell leaders, in addition to the subjects taught to party members, importance must be attached to guiding party cell leaders in the following:

--Assessing the situation surrounding party members and the masses within the detachment and correctly analyzing and evaluating their strengths and weaknesses during each period of time;

--Organizing party cell activities well and working with party members to make good preparations for party chapter conferences under the guidance of the party chapter committee;

--Displaying a high level of responsibility with regard to building the party chapter and exercising the collective leadership of the party chapter while knowing how to perform party committee work;

--Adopting methods for operating independently in accordance with the resolutions of the party chapter and the directives of the upper level; being determined and knowing how to tap the strength of the collective of the party cell and mobilize the masses to take positive steps to overcome difficulties and dangers in order to successfully complete every task and fully comply with every position and policy of the party, state and army.

The training of party cell leaders must become a regular practice. If prepared and organized well, the following methods of training are suitable and effective:

--Contributing opinions to and training party cell leaders on the basis of observing the situation of the party cell and unit and listening to the cell leader's assessment of the situation and evaluation of party members and the masses;

--Participating in the activities of the party cell, offering opinions during discussions and, in this manner or after the party cell meeting, contributing additional opinions to the cell leader, thereby providing him with training;

--Providing training through meetings of party cell leaders;

--Providing training through the preparations made for party chapter meetings;

--The periodic phases of party inspections and the meetings held to gain experience, review work and review how well party members are meeting the five objectives of the major campaign being conducted at this time provide very good opportunities for training party cell leaders.

The deputy commanders in charge of political work and the political agencies on the regimental level and the battalion party committee secretaries are responsible for guiding the training of party members and party cell leaders.

c) Training party chapter secretaries and party chapter committee members.

Party chapter secretaries and party chapter commitee members are party members who are elected by the party chapter. This heavy responsibility demands that the secretaries and party committee members possess the qualities and abilities needed to organize the collective leadership of the party chapter well. Party chapter secretaries must be thoroughly familiar with the personnel, the work environment and the technical equipment of the unit. The deputy regimental commander in charge of political work and the regimental and division political officers are the persons who are primarily responsible for the training of party chapter secretaries. As regards the specifics involved in their training, attention must be given to both the revolutionary qualities and the work skills of the party chapter secretary, which include the leadership principles of the party applied in the collective leadership of the party chapter; the methods of assessing the situation, preparing for and guiding party members in preparing for party chapter meetings and holding party chapter meetings; organizing party chapter activities; guiding the plans for the implementation of party chapter resolutions; organizing the work involved in party development, the building of the party chapter ideologically and organizationally, inspections and so forth.

Ordinarily, the party chapter secretaries in the companies are the deputy company commanders in charge of politics. Therefore, it is necessary to coordinate their training with the training in the profession of political work on the company level. Because the corps of party chapter secretaries on the company level is constantly changing, the training of party chapter secretaries must be conducted on a regular basis. Only by making an effort to insure that each regiment always has skilled secretaries in 50 to 60 percent of its company party chapters will we have many stable conditions for building strong regiments.

Party chapter committee members must be skilled in party chapter work, be experts in party chapter committee work and know how to perform the work of the party chapter secretary. Every party chapter committee member must know how to work collectively, engage in research and debate with a high spirit of responsibility and possess a high sense of unity and struggle; know how to focus his efforts on conducting research and holding discussions with party members and the masses; know how to boldly and correctly perform the jobs assigned to him; know how to formulate work plans for the work of which he is in charge and guide the masses in the performance of this work; know how to inspect and supervize the work of which he is in charge; and gaining experience with regard to strictly maintaining the practice of exchanging opinions and holding meetings within the party chapter committee.

In the training of party chapter committee members, attention must be given to training comrades who are party chapter committee members as well as primary cadres in charge within the company, such as the company commander and deputy commander. Experience has shown that if these comrades possess a good spirit of responsibility, display ability and ethics in the fulfillment of their duties and know how to unite closely with others, the work of the party chapter as well as the work of the company can be carried out well.

If each member of the party chapter is trained and knows how to organize the collective work of the party chapter well, the collective strength of the party chapter will surely be developed. For this reason, we must regularly strengthen the unity and closeness within each party cell, each party chapter committee and the entire party chapter.

For each type cadre, it is necessary to establish specific suitable educational requirements based on the nature of their work, the activities of their unit and so forth. For example, with regard to agency party chapters that have many party members that are cadres and which perform very important work, importance must be attached to providing training in the basic viewpoints of the party as they are applied in research and in guiding the buildup and the combat operations of the unit; at the same time, attention must be given to forging within them the style of being bold and maintaining close contact with their unit, forging revolutionary ethics and so forth.

As regards party chapters at factories and warehouses, it is necessary to emphasize the spirit of collective ownership, labor discipline, etc.

3. Building strong political agencies.

The political agency is the organization that helps the party committee provide leadership and helps the commander organize the various activities involved in party work and political work. The political agencies within the technical branches must delve deeply into the technical sciences, research the principles involved in political work and the regulations regarding the organizational structure of the army and apply them in a flexible and creative manner within their branch. For example, how are the principles the party committee leads the collective and the commander organizes implementation applied under the conditions of a decentralized technical unit that is coordinating with friendly units? How are the masses in these branches organized? Therefore, the political agency must first have a thorough understanding of the basic principles of political work, the basic tasks, requirements and work regulations of a political agency, in general, and must delve deeply into the technology of its branch in order to fulfill its duties and help the party committee echelon and the commander lead the unit in meeting the four basic requirements of being the masters of technology, possessing strict, self-imposed discipline, establishing close unity and cooperation and practicing frugality in the building of the country, the buildup of the army and in winning victory in combat.

The jobs of the political agency can be broken down into three major types:

--Studying and understanding the lines, positions and policies of the party and state, the resolutions and directives of the upper level, the situation of the unit and the forms of organization related to the buildup and the combat operations of the unit;

--Researching and proposing policies and plans regarding the political work of the unit;

--Guiding the lower levels in organizing the implementation of the resolutions of the party committee and the directives and orders of the commander.

In order to perform these jobs, political agencies must skillfully organize the research and formulation of plans, the assessment of the situation surrounding preparations for a party committee meeting and the enactment of plans for political work in order to implement the resolutions of the party committee.

a) The formulation of plans.

In order to formulate good plans, the following specific requirements must be met:

--Fully understanding the resolutions, directives and orders of the upper level and of one's level and clearly understanding tasks; fully understanding the unit's situation;

--Determining the gap between the requirements of the task that must be completed and the immediate situation of the unit;

--Defining the steps that must be taken to close this gap in order to complete the task; setting forth requirements, norms and measures for carrying out each step;

--Using forces (personnel, units, material-technical means);

--Stating the jobs which other sectors and components must perform to help the unit complete its task;

--Defining the specifics and requirements involved in coordination among the various sectors;

--Establishing a deadline and reporting requirements;

--Establishing the inspection and supervision plan for the commander and agency.

In the formulation and implementation of plans, everyone from the comrades in charge of the agency and the various components to assistants must think and engage in research with a high spirit of responsibility. The comrades in charge, such as the director and section heads, must have even more time to think about plans so that they can guide the agency in making good preparations and contribute opinions to and adopt an effective plan that is not vague in nature or perfunctory.

Once a plan has been established and approved, it is necessary to scrupulously implement the contents of the plan; these contents may not be altered to suit one's convenience, compromised or reduced. The agency must supervise subordinate units and set good examples in implementing those portions of the plan that apply to it.

Reporting discipline must be strictly maintained. Once the plan has been completed, it is necessary to gain experience, conduct a review, evaluate results and reach a conclusion.

b) The filing of reports.

The filing of reports has the purpose of informing the upper echelon of the unit's situation, the work that has been performed, the work that has not been performed, the difficulties that are being encountered, the experience that has been gained and so forth so that it can provide prompt guidance and, at the same time, disseminate experiences and prepare for new plans.

The periodic reports (quarterly and monthly) on the overall situation and reports on the specialized work of the vertical sectors must be in written form, even though verbal reports can sometimes be made. This is because it is necessary to have a document to study and to review at a future date in order to avoid having to hear many verbal reports or submit reports through many different levels; it is also necessary in order to forge cadres and agencies and establish necessary reporting and administrative procedures.

Reports must be accurate and timely, present important matters, reflect the actual situation of personnel and the organization and reflect how technical equipment is being used. Reports must be concise but contain the necessary supporting data; reports must include an analysis and observation of results, and present strongpoints and weaknesses as well as their causes; and reports must propose the next steps to be taken.

In order to meet the above mentioned requirements, the experience of many units has shown that it is necessary to:

+ Establish regular procedures for assessing the situation and receiving information on the situation in many different ways: implementing the system of hearing direct reports from the unit, the messenger system, the reporter system, the duty section system, the inspection system of the various sectors and command echelons and inspections of party discipline. It is necessary to hear thorough reports on the situation in order to assess the essence of the situation. One must avoid rambling reports that lack focus, that fail to delve deeply into any matter; whenever a messenger is being sent to conduct an inspection or assess the situation, it is necessary to clearly inform him of his objectives and requirements and the specific elements involved; when a cadre returns from an inspection, the commander and political agency must set aside time to hear a thorough report from him.

+ Research and analyze the situation and uncover problems that must be resolved: after hearing a report on the situation, it is necessary to reach precise conclusions, determine which jobs must be performed next and adopt new measures for developing upon strengths and rectifying and correcting weaknesses and deficiencies.

In order to perform these jobs, we must have a firm grasp of fundamental matters, such as the line on the revolution, the tasks of the revolution, the nature of the army, the basic and immediate tasks of the unit, the basic characteristics of the branch, the resolutions, directives and orders being implemented and so forth and must use them as the basis for evaluating the present situation of the unit, reaching conclusions and adopting new measures.

c) Preparing for a conference of the party committee.

The command, political, rear service and technical agencies are responsible for preparing for a conference of the party committee to adopt a resolution for leading the unit. To accomplish this, it is necessary to perform the following jobs well:

--Observe and assess the situation of the unit throughout the process of implementing previous resolutions of the party committee and orders and directives of the upper level and one's own level in the recent past and, on this basis, thinking about and preparing for the work of the coming period;

--Study the resolutions and directives of the party committee and of the commander on the upper level, compare them to the unit's situation and think of ways to implement these resolutions and directives;

--Exchange opinions with the agencies, units and centers of one's party committee echelon (not necessarily all centers) regarding measures for organizing implementation;

--Within the political agency, the director, deputy director and the head of the organization committee are the persons who must exchange opinions in order to make the necessary preparations.

Each day, the deputy commander in charge of politics and the director must, while guiding party work and political work, exchange opinions and reach agreement concerning upcoming work. This is also a way to prepare for a conference of the party committee.

The preparations made by political agencies can never totally replace the preparations made by the secretary of the party committee, rather, they only involve supplying documents and projections of these agencies. The secretary must make his own preparations; ordinarily, the secretary of the party committee is the commander or the deputy commander in charge of politics, consequently, the secretary thinks about matters that must be prepared for a conference of the party committee in his job of observing and supervising daily work. Only when the secretary fulfills his duties well does he have the conditions needed to make good, urgent preparations for a successful party committee conference. The secretary must also exchange opinions with the members of the party committee, especially the members in charge of government work in the units on the lower levels. This is also a good way to prepare for a conference of the party committee.

Before a conference of the party committee is held, the standing committee of the party committee must hold a meeting in order to make very good preparations; in this way, the conference of the party committee will be concise and of high quality. After the meeting of the standing committee, an outline must be forwarded to every party committee member so that they can prepare their thoughts in advance.

The process of preparing for a conference of the party committee is also the process whereby agencies prepare plans for implementing the resolution of the party committee. If the important matters and the rough outline of the policy involved are thoroughly researched by the secretary and the agency and discussed in detail by the standing committee, they ordinarily provide a very good foundation upon which the agency can prepare the work plan of its sector for implementing the resolution of the party committee.

4. Building the basic units.

All echelons must attach importance to building the basic units and do so in accordance with their duties and position. The division is the echelon that directly trains basic level cadres and guides the buildup of the basic units.

To begin with, it is necessary to correctly understand the role and the characteristics of the basic units. They are the places that carry out specific tasks in order to turn the lines, positions and policies of the party into actual results. They are the places that directly and daily come into contact with cadres and soldiers as they perform their jobs, as they engage in productive labor or as they maintain combat readiness and carry out combat operations. They are the places that have and use the material and technical wealth of the army. They are the places at which cadres come into direct contact with soldiers, at which they teach, train and command soldiers. They are places at which the nature of work is generally very urgent and the situation is constantly changing. They are places which demand that the commander possess a specific, meticulous style, always set good examples and employ work methods that are suited to the soldiers involved.

The political work performed at basic units encompasses many areas; however, efforts must be focused on the following key matters:

Establishing unity and closeness among the various components under specific standards based on requirements for each team, each squad and platoon and up to the entire regiment both within the party (the party cells and the party chapter committees of the entire party organization) and the entire regiment. The objective of strengthening the unity of the basic units is so that they will help one another forge themselves, overcome their difficulties, complete their tasks, protect the organization, strengthen and improve their self-imposed discipline, organize collective life well, endeavor to make progress and become outstanding Youth Union members, party members and cadres.

In order to achieve this objective of unity, everyone must be in agreement that the combat objective is to fulfill his task and carry out the task of the unit; everyone desires to make progress and everyone has the responsibility of enhancing the tradition of unity and the other traditions of the unit, which is an effort in which party members and cadres must always set good examples. At the same time, it is necessary to combat such deviations as establishing unity but not waging a struggle, being in "collusion" with one another for the purpose of engaging in negative actions, attacking other persons, protecting one another, etc.

+ Teaching democracy and discipline, considering this to be routine work at basic units; opposing such backward attitudes as one-way consciousness, placing democracy into opposition with discipline and so forth.

+ Guiding the activities of the mass organizations at basic units in exact accordance with the nature and function of each organization;

+ Teaching the spirit of practicing frugality in the buildup of the army with importance attached to maintaining and protecting public property;

+ Organizing the spiritual and material lives of troops well and tightly managing the personnel and the material and technical bases of the unit;

+ Being especially concerned with forging the ethics and style of the cadres in the basic units so that everyone sets examples in his words and actions, is always close to the masses, displays a specific, detailed, urgent and precise style, is brave, courageous and bold, is modest, simple, honest and straightforward.

IV. Security Work

The branches and services of our army are a force that possesses high fighting strength and that contribute to the combined strength of our people's armed forces; therefore, the enemy observes them very attentively and wants very much to sabotage our branches and services by every malicious scheme possible and cause them to lose their fighting strength.

As soon as the branches and services were established, the Military Commission of the Party Central Committee and the Ministry of National Defense attached full importance to leading and teaching troops about security work. As a result, the buildup and the combat operations of the branches and services have developed smoothly and every task has been completed well. However, we still have many weaknesses, such as a lack of vigilance, the revelation of secrets, the loss of classified documents, the failure to comply with regulations on the recruiting of personnel, on protecting against spies, on maintaining secrets and so forth.

Below are some experiences in security work.

1. Guarding against spies and protecting secrets.

The technical branches usually have technical equipment that is cumbersome, difficult to camouflage and difficult to hide during mobile operations as well as when deployed at battle positions. Modern technical equipment usually consists of components that people like to see firsthand or which they like to talk about or try to understand. As a result, some of our troops brag about the equipment they have and reveal secrets. There are some comrades, including cadres, who simply think that their equipment contains nothing that is new, that it is equipment with which the enemy is already familiar, consequently, they have even less regard for maintaining secrets. For this reason, teaching everyone the spirit of revolutionary vigilance and the attitude of guarding against spies and protecting secrets must be carried out on a regular basis from top to bottom. It is necessary to strictly supervise and inspect compliance with the rules and regulations on maintaining secrets.

The organizational regulations and measures designed to maintain secrets must be specific and clear. The quantity, style and type of equipment and the technical properties of the equipment must be specifically stated; the methods of using equipment, methods of fighting, material-technical bases, reserve forces of the corps of cadres, technical research projects, troop billeting areas, battle positions, command posts, lessons learned from experience, from reviewing the way we use technical equipment and our methods of fighting, regulations regarding signal operations, the transmission of orders and so forth are secrets that must be kept.

Communications and work with other places and agencies must be carried out in exact accordance with the division of labor of the upper echelon; the habits of bragging and doing as one sees fit must be opposed.

The government agencies and local mass organizations must closely coordinate with one another in order to adopt plans for maintaining national defense secrets and protecting the army.

2. Protecting personnel, the organization, technical equipment and repair installations.

All branches have many material-technical bases and a specialized corps of command cadres and technical cadres. Insuring the safety of personnel and equipment is a constant requirement. The loss of one person, of one equipment component has a major effect upon combat operations. Therefore, thorough security must be maintained. It is necessary to thoroughly teach the specifics involved in being vigilant, in maintenance and the practice of frugality. Regular activities must be organized for the purpose of preventing backward, negative actions that would lead to the damaging of equipment, the theft of materials or the theft of equipment parts. It is necessary to regularly conduct good reviews and internally purify the organization politically by means of managing personnel well, managing the organization well and managing the implementation of work procedures well.

The branches and services are important forces of our army and have the function and task of fighting and supporting combat through the use of increasingly modern technical equipment. In order for the branches and services to be built up and fight victoriously, they must have revolutionary personnel, new, socialist personnel who are well versed in technology, are proficient, have a tight, efficient and balanced organization and are skilled in their duties. To accomplish this, we must, under the leadership of the party, tap the combined strength of every political, military, rear service, technical and other sector. Party work and political work play a very important role and must make positive contributions along with the other areas of work to constantly improving the overall quality and developing the fighting strength of the various branches.

Party work and political work must teach and mold personnel and the organization within the branches so that they possess correct and firm political and ideological qualifications, grasp the basic viewpoints of the party, possess the necessary knowledge of science, are skilled in taking action and possess a style consistent with the technical activities within a revolutionary army. Everyone must be closely linked to his organization; every organization must be a strong collective that is united in both will and action.

On the basis of firmly grasping the basic matters involved in the buildup of units, political work must delve deeply into the technical sciences, into each sector and trade in these technical sciences and in the activities within the branch in order to guide the thinking and actions of troops so that their thoughts and actions are profound, effective and flexible. Therefore, political cadres and agencies must fully understand the line, positions and policies of the party and the basic principles of party work and political work within the army; at the same time, they must diligently study in order to develop an increasingly deep knowledge of the technical sciences, of the equipment of their units so that party work and political work are strongly effective. They must adopt methods of operation that are consistent with the nature and characteristics of the branch and with cadres and soldiers, the majority of whom are persons who possess political awareness, are educated, possess knowledge of science, technology and a specialized field and have experience in many fields of work. They must have a firm grasp of the problems that must be resolved with regard to awareness and thinking and the guidance of the actions of others, must successfully implement the method of molding thinking, the method of persuasion, must differentiate between right and wrong, must guide and encourage others to do that which is right, to overcome and avoid that which is wrong, etc. Political cadres and agencies must attach importance to conducting research, formulating plans for the implementation of resolutions and work directives, gaining experience and conducting reviews in order to constantly improve their qualifications in every respect with a view toward fulfilling their duties well and helping to constantly improve the overall quality and develop the fighting strength of the branches and services, in particular, and our army, in general.

SEVERE SENTENCES HANDED DOWN IN DECADENT MATERIALS CASES

Hanoi NHAN DAN in Vietnamese 27 Oct 81 p 4

[VNA News Release: "Quang Nam-Da Nang Province Severely Punishes Persons Convicted of Storing and Circulating Decadent, Reactionary Cultural Materials"]

[Text] On 20 October, the People's Court of Quang Nam-Da Nang Province was in session to try Nguyen Van Phuc and codefendants Pham Mai, Duong Van Phuong, Hoang Van Hien and Tran Thi Diem being accused of having stored and circulated decadent and reactionary cultural materials.

Nguyen Van Phuc, 57, resides at 204 Dong Da Street, Da Nang. From 1952 to 1973 he was a mercenary of the French colonialists and U.S. imperialists. He had received from the U.S.-puppet money and building materials to build a place to house prostitutes catering to their need. In 1973 he was discharged from the army and organized dance lessons in his home. He also established there an organization called "center of research on the occult science" which he headed himself. He studied and experimented with many kinds of pictures that would corrupt the youths and wrote love novels that would appeal to their prurient interest. He stored many kinds of decadent cultural materials like pornographic movies, music tapes, film projectors and reactionary and lewd pictures of U.S. imperialists. In spite of repeated warnings from the administration, he still maintained the same unlawful activities. Although he had registered his occupation as electrical repairman, he actually did business in prostitution and decadent cultural materials. He was arrested, with many evidences of his activities consisting of 17 film projectors, 78 pornographic movies, 60 other decadent films and many pictorial books of reactionary contents being confiscated.

Pham Mai and Duong Van Phuong had been puppet soldiers who owed the people a blood debt. They received leniency from the revolution in the wake of the liberation. However, with their reactionary nature, they had been consciously using and disseminating decadent cultural materials. Mai himself contacted Tran Thi Diem, a vendor in the Da Nang open-air market, who served as a go-between for him to buy a movie projector and seven pornographic films which were shown for his wife's and Phuong's viewing. Later he sold them to Phuong and Hien, who showed the movies for many other people's viewing. In addition to circulating pornographic movies, Thi Diem and Hien also stored many music tapes which had been banned from circulation.

Considering the harmful nature of the acts committed by Phuc and members of his gang and the attitude of each defendant, the People's Court of Quang Nam-Da Nang Province pronounced the following sentences: Nguyen Van Phuc, life imprisonment and confiscation of the house he had been using for his unlawful activities; Pham Mai and other defendants, sentences ranging from 2 years of suspended sentence to 4 years of imprisonment.

HANOI DETERMINED TO KEEP FOREIGNERS AT ARMS LENGTH

Bangkok BANGKOK POST in English 18 Nov 81 p 4

[Text]

WHEN you land at Hanoi airport, water-filled bomb craters, peppering the paddy-fields, flash upwards in the sun — sudden reminders of the terrible decades of war in Vietnam.

On the ground, a couple of shabby nissen huts serve as the air terminal — early warning to travellers of this nation's new priorities. Then a narrow tarmac road leads for 40 kilometres — over a perilous chain-bridge and the long Red River bridge, and finally past a flood-dyke into the city.

"What's Hanoi like?" I asked on the plane of a little Swedish boy whose father works at a pulp mill. "Very dirty, very poor, and watch your pockets," he said.

"Has the situation in Vietnam improved since you came?" I asked a smooth-haired French diplomat who was leaving after a three-year term.

"Hardly at all," he said, then: "Well a little."

The Vietnamese — even in the austere north — are a warm and hospitable people. They welcome foreigners, especially those who have come to help. But creature-comforts are not items which they can often afford.

Foreigners do not easily fit into Vietnamese life. They do not often get the chance to mingle with "ordinary" Vietnamese. Embassy staff and technical experts, such as they are, live mainly in flats or hotel rooms in styles to which they are unaccustomed, relying heavily on the aeroplane from Bangkok for packages.

One diplomat had waited months for his typewriter to arrive by sea, concluding that it had got mixed up in the port of Haiphong with typhoon-relief goods. Another found he had to put his kitchen equipment in the bathroom. Another had apparently received an official reprimand for offering a soft drink to a workman.

The small foreign community in Hanoi meet one another often since their contact with the Vietnamese is so limited. Morale is not high. Illness has caused early departures, especially among the Asian diplomats; others are given only a short term. Only half-a-dozen senior diplomats have brought their wives to Vietnam, which they consider a rough posting.

The window display outside the British Embassy in Hanoi's still colonial-style city centre is filled with photographs of Knightsbridge fashions and smiling, elegant ladies modelling furs — an inappropriate but honest symbol of the West's wealth.

Yet the frugality of the lifestyle here has certainly impressed itself on some. The British Ambassador says that his embassy has no dustbin. This is because every item of waste paper, pieces of glass and empty tins, are instantly seized and either saved or sold by the embassy's local staff — a telling sign of the acute shortages all over the city.

The ambassador, Derek Tonkin, like several of his Western colleagues, regrets the limitations of diplomacy in Vietnam. Without being "sympathetic" — which even today almost amounts to a term of abuse in diplomatic circles — he knows well that the country is desperately in need of aid and investment, especially of raw materials and spare parts, but that the political climate over the Atlantic is against it.

Even humanitarian aid to Vietnam today, in the wake of last year's disastrous typhoons and crop-failures in the north, is frowned on as a possible contribution to the Vietnamese involvement in Kampuchea. In the

United States, so much as a tractor given to Indochina as a component of disaster-relief may be an offence against the "Trade with the Enemy" Act.

The EEC foreign ministers have also recently turned down a proposal for humanitarian aid. From Britain, the only aid of any kind comes in small grants from such agencies as the Catholic Fund for Overseas Development, Christian Aid, the Committee for Medical and Scientific Aid to Vietnam, and Oxfam.

Britain's aid programme in Vietnam was run down rapidly by the Callaghan government after December 1978, when Vietnamese troops first entered Kampuchea -- ironically just before British voluntary agencies and the media generated enormous public interest in the Kampuchean disaster and in the needs of Indochina as a whole.

One of the casualties of the aid programme was the British Council's English-language teaching programme, which had provided 18-month courses for post-graduate students, civil servants and teachers of English in Vietnam. At least one young interpreter in Hanoi, who said he would have applied for the course, keeps up his English by listening to the BBC World Service on a friend's radio. Others still have the alternative of learning Russian or of applying for a French course, which is still available under France's aid programme.

But what Vietnam really needs from an aid programme is still post-war reconstruction, help to rebuild agriculture and industries, the improvement of supply-lines and port facilities. The US$3,200 million in aid, which Nixon is said to have promised Vietnam during the signing of the 1973 peace treaty, has not materialised.

Today, almost the only Western countries directly helping Vietnam — apart from UN agencies and companies involved in offshore oil exploration — are Scandinavian.

The Soviet Union is, of course, financing the Vietnamese military presence in Kampuchea and along the Chinese border, and has been the only large supplier of aid to Vietnam since China pulled out in 1978. This aid comprises about US$3 million a day, and is falling. Russian food aid fell to 800,000 tonnes last year, compared with 1.2 million tonnes the year before . — GEMINI

READER DEPLORES ILLEGAL GASOLINE SALES FROM TANK TRUCKS

Hanoi NHAN DAN in Vietnamese 27 Oct 81 p 3

[Readers' Opinions column by Xuan Hong, Nghe Tinh Province: "Let Us Stop Illegal Roadside Gasoline Sales"]

[Text] At 1900 hours on 16 September 1981, on our way from Hanoi to Vinh we stopped at the town of Cau Giat (Quynh Luu District in Nghe Tinh Province). As we got off our vehicle, we were surprised to see around us many people busily going back and forth holding jerrycans, carrying at the ends of bamboo poles plastic containers of 20-liter size, carrying galvanized iron containers or holding in their arms large pots of 40-liter size. About 20 meters from our vehicle there were about 10 people also having containers and cans in their hands and gathering around 2 vehicles. As we came closer, we found that they were fighting with one another as they tried to buy oil from the drivers of 2 tank trucks, tags No 37A-17-23 and No 37A-02-90, of Nghe Tinh Gas and Oil Corporation. Taking advantage of the near-darkness of the evening, the drivers stole oil from the state to sell to private business people. The quantity of oil that they sold as we observed then was 600 liters. According to some local people, drivers of the Nghe Tinh Gas and Oil Corporation usually arrived here at about the time of darkness and repeatedly stole gasoline and oil from the shipment they were transporting from the central point of delivery and sold it to private business people at the price of 4 dong a liter. The latter would resell it at Cau Giat Market for 7 dong a liter.

Gasoline and oil is a strategic line of goods under the management of the state to be distributed to organs, units and cooperatives according to the state plan for use in production. As the agricultural cooperatives in such districts as Do Luong, Nam Dan, Yen Thanh, etc., where rice plants fail to grow while being in boot, currently do not have oil to run water pumps for the fight against drought, drivers of the above-mentioned tank trucks stole hundreds of liters of oil to sell to private business people. We wonder how they can have the right quantity of oil delivered to the warehouse of the corporation when they come back!

BRIEFS

MODEL SECURITY UNIT--Reporting on the mass movement to defend the fatherland's security, the 18 November issues of DOC LAP weekly carries an article by (Huynh Quang Nam) which depicts the second ward of Tuy Hoa town as an outstanding unit under the movement. The article says: Implementing the movement for 5 years from 1976 to 1980, the cadres and people of the second ward have increasingly heightened their revolutionary vigilance to promptly smash all the enemy's psychological warfare tricks. They have detected and denounced two large-scale reactionary organizations called J-31 and S-21, whose members have all been arrested. They have also detected those who have taken advantage of religion to engage in counterrevolutionary activities. They have helped educate and persuade the faithful and Vietnamese people of Chinese descent to remain absolutely confident in the leadership of the party and state, by not listening to the instigative propaganda of the Beijing expansionists who are colluding with the U.S. imperialists and international reactionaries, and by uniting their efforts to build the country. The people's collective mastery groups have promptly struggled against such social evils as gambling, superstition and prostitution. They have taken the victims of these evils before the public for criticism, helping them return to the honest way of earning their living. INTERNATIONAL RELATIONS, TRADE AND AID

HANOI SEES ITS ROLE AS BUFFER BETWEEN CHINA, SOUTHEAST ASIA

Kuala Lumpur NEW STRAITS TIMES in English 30 Oct 81 p 14

[Article by Brian Eads]

[Text]

HANOI: Travelling north out of the Red River delta, through the mountains of Vietnam's border provinces, is like climbing into an early Sung Dynasty scroll painting.

The jagged peaks, coated here and there with clumps of sparse vegetation, have the same rugged simplicity and stark beauty captured by Chinese painters a thousand years ago.

It is not a comparison the Vietnamese would welcome. To them, this is the frontline in the latest of an apparently interminable succession of wars. Indeed, the conflicts with France and the United States were but brief interruptions in the central national issue for the last 4,000 years: battling China.

"China has dominated Vietnam twice," Foreign Minister Nguyen Co Thach told me in an interview. "Once for 1,000 years, once for 20 years. They have invaded Vietnam 12 times. The longest period of peace between Vietnam and China has been 200 years."

In Lang Son, nine miles south of the abandoned "Friendship Pass" border post, the local party chief catalogued Chinese

"aggression". Like Thach in Hanoi, he now realised that Chinese "betrayal" had begun at the Geneva Conference in 1954, he said.

At present, the border conflict that has continued since the Chinese invasion 32 months ago stops short of full-scale war — but only just.

According to military sources in Hanoi, Vietnam has 160,000 frontline troops along the Chinese border, 90,000 more between the border provinces and Hanoi, and additional militia and reservists to be mobilised in the event of war.

The Chinese strategy, officials say, is to keep Vietnam off-balance, to squeeze it and bleed its resources. "But," said Thach, "Vietnam is not squeezed."

It is less than the whole truth. The suspension of Chinese and Western aid that came with Hanoi's intervention in Kampuchea further disrupted a national economy which, in both north and south, has subsisted on foreign aid for 35 years.

Factories lie idle or work short-time for want of spare parts, raw materials and fuel. Last year, rice rotted in warehouses while cases of malnutrition multiplied.

Allowing for the vagaries of the weather, the failure to ensure the supply of sufficient rice was a blow to the government's prestige.

The joke in Saigon is that when Hanoi urged people to tighten their belts, the reply went back: "Please send us some belts."

For all the hardship and failures to deliver a prosperous peace, the notion that Vietnam can be bludgeoned into submission, then revived and seduced with economic co-operation and aid, does not stand up to scrutiny in the dappled sunlight of Hanoi's broad tree-lined boulevards.

Soviet bloc aid is central to Vietnam's survival and is put at US$2,000 million a year. But the intimate relationship with Moscow is rooted more deeply in a shared perception of ideology and the ultimate insurance policy against Chinese might than in economics.

At present, benign weather and a wide-ranging reappraisal of agricultural policy, with greater rewards for enterprise, promise self-sufficiency in foodstuffs for Vietnam this year.

Eighty per cent of the population live in the countryside, and this year has seen a perceptible improvement in their standard of living, even if only the chance to build a brick house.

Ironically, those hurt most are the honest cadres in the cities seeking to cope with an inflation rate of up to 70 per cent, with a cloth ration of two-and-a-half yards a year, and a monthly income of perhaps US$16.

Vietnam, said Nguyen Co Thach, would welcome improved relations with its non-communist neighbours and the West. Moscow was recently denied oil-prospecting rights in certain choice areas of the country's continental shelf, leaving the door open for Western companies and their superior technology.

The price being asked — total Vietnamese withdrawal from Kampuchea — will not be paid. "Our forces in Kampuchea are linked to the threat from China," said Thach.

The task Hanoi appears to have set itself on the diplomatic battlefield is to drive a wedge between China and the non-communist South-East Asian countries, with Vietnam cast as the invincible buffer between them and an untrustworthy, expansionist Peking.

In Indonesia and Malaysia, they have won many adherents already. — Observer.

MASS MEETING SUPPORTS PALESTINIAN STRUGGLE

OW261725 Hanoi VNA in English 1527 GMT 26 Nov 81

[Text] Hanoi, November 26 (VNA)--A mass meeting in support of the Palestinian people's just struggle was held here today in celebration of the International Day of Solidarity With the Palestinian People (November 29).

It was sponsored by the Vietnam Committee for Solidarity and Friendship With Other Peoples, the Vietnam Committee for Afro-Asian Peoples' Solidarity and the Vietnam Peace Committee.

The Presidium of the meeting included Hoang Quoc Viet, member of the Communist Party Central Committee and president of the Presidium of the Vietnam Fatherland Front Central Committee;and Sa'id Khalil al-Masri, acting representative of the Palestine Liberation Organisation (PLO) in Hanoi.

Addressing the participants, Tran Hoai Nam, general-secretary of the Committee for Solidarity and Friendship With Other Peoples, hailed the Palestinian people's valiant and staunch fighting spirit and vehemently condemned U.S. imperialists and the Israeli Zionists for using the Camp David and the Egyptian-Israeli treaties to divide the Arab countries, isolate, weaken and eventually liquidate the Palestinian resistance movement and the national liberation movements of other Arab nations.

He reiterated the Vietnamese people's full support for the struggle of the people of Palestine and other Arab countries for the recovery of their territories occupied by Israel and for the Palestinian people's fundamental national rights, including the right to return to their homeland and establish an independent Palestinian state.

In his speech, the acting P.L.O. representative, Sa'id Khalil al-Masri, thanked the Vietnamese people for giving the Palestinian people a valuable, strong and selfless support.

RECEPTION OF GOODS FROM ABROAD MADE EASY

Paris DOAN KET in Vietnamese 14 Nov 81 pp 1, 8

/Article written by P.V. and V.V. in Ho Chi Minh City in August 1981 and in Montreal in September 1981: "Reception of Goods Sent to Vietnam from Abroad"/

/Text/ (DOAN KET Note: To date, the most convenient way to send gifts from Western Europe to Vietnam is through the agency of Vina-Paris. Relatives in Ho Chi Minh City receive these gifts at the Distribution Station, 10 Co Giang Street. According to an agreement between the editorial staff of DOAN KET and that of DAT VIET (Canada), a reportage on this distribution station has been made by special correspondents of DAT VIET. We are publishing below the reportage (excerpted from the October 1981 issue of DAT VIET). Based on a separate investigation of the DOAN KET correspondent, we are adding some footnotes concerning the goods shipment time and the loss percentage).

In Ho Chi Minh City, the gifts sent by overseas Vietnamese from Canada and the United States through the medium of the Laser Express Corporation and from France and Western Europe through the medium of the Vina-Paris Corporation are received at the Goods Distribution Station (abbreviated as GDS), 10 Co Giang Street. GDS is a spacious, 30-meter wide and 50-meter long four-storied building. The first story is used as a warehouse and a goods distribution place. The task of distributing goods is assumed by a special management board set up by the People's Committee of the First Precinct and composed of 70 persons. In April 1981, GDS began its activities (formerly carried out by an organ called Imex-Saigon which distributed goods at a station located at 51 Dinh Tien Hoang Street).

We had many occasions to visit GDS in June, July and August. We went there twice to directly receive goods. On another occasion, we accompanied our relatives who came there to receive goods and finally we dropped in to directly talk with the goods recipients and the Management Board. Early in the morning and at noontime (about 0100 pm), there were about 100 people in the station to receive goods. They were either standing and waiting, paying storage fees or verifying goods. There was absolutely no jostling.

The goods withdrawal procedures were relatively easy. The customer came in with a goods withdrawal notice and a citizen certificate (equivalent to an identity card) or a household registration book. After reporting to the documents receiving section, the customer had to wait for about 5 or 10 minutes and was then called in to receive a goods statement (if this had already been made abroad). He then proceeded to a counter to pay the storage fees (about 15 to 30 dong for each case of merchandises) and to the warehouse to receive the case which should still be intact and closed. Again, he had to wait for 10 minutes before having the goods verified. This phase proved to be the lengthiest one and was carried out by the customs authorities assisted by the GDS personnel. Merchandises were taken out of the case and displayed and rolls of fabir unwound and measured. The customs officer reexamined the goods statement and jotted down the amount of tax to be levied. If the customer did not have the goods statement, he would have to make it on the spot and this would take a long time. After repacking the goods, the customer went to the last counter to pay the tax (which was usually between several ten and several hundred dong). Before leaving the station, he had to go through the last control desk to make sure that he was carrying exactly the case of merchandises addressed to him.

The GDS personnel was divided into many teams to retrieve goods withdrawal notices, to collect storage fees, to issue goods, to help customs officers verify goods and so on. In addition, there were many employees standing ready to guide customers. The GDS personnel wore uniforms to differentiate from customers coming to receive goods. If they were displeased with something or if they wanted to lodge some complaint or protest, customers might ask to see the station chief who was sitting in his office near the waiting room.

Between their arrival at the station and their departure, customers spent from 45 minutes to 2 hours before they could take out their merchandises.

In our capacity as DAT VIET correspondents, we went there to talk with people coming to receive goods. Generally, they were ready to answer our questions. Most of them were residents of Ho Chi Minh City but a number of them came from remote areas such as Nha Trang,Minh Hai and Dong Nai. No matter whether they came here for the first time to receive goods or were regular customers, all of them affirmed that GDS did its job openly and properly, that it provided a clear guidance, that goods were delivered quickly and that there was no loss. But some customers complained mildly that the tax (levied in late August) was much higher than in the past. They also wondered whether they could have an opportunity to express their views to the responsible organs. Almost all customers said that it took about 2 months from the goods shipment date to the reception day. /DOAN KET footnote: Since many months, it takes about 3 weeks for the goods sent from France to reach Ho Chi Minh City--reckoning from the day they were consigned to Vina-Paris to the day they were received by the senders' relatives at the Goods Distribution Station.7 Many customers said that the merchandise packages usually arrived before they received the letters sent to them by their relatives through the post office (so that there were times when they did not know in advance the contents of the cases). People living in remote provinces received gifts 1 or 2 weeks later /than people in Ho Chi Minh City7 but enjoyed more priority in withdrawing goods: On receipt of a notice, they would go to Ho Chi Minh City and might come to the station to receive goods on whatever day and at any time (of course, during the working days and hours) instead of having to wait until the day and time indicated in the notice.

Interview with the Management Board

Before returning to Canada, our correspondents paid a last visit to GDS to meet with its management board and personnel and to ask them some questions about the problem of receiving goods. Following is a succinct report on the gist of the talk between DAT VIET and GDS:

DAT VIET: Will you please tell us when this installation began its activities, what is its basic mission and whether it receives goods only from the Laser Express Corporation in Canada.

GDS: GDS, 10 Co Giang Street, began its activities in April 1981 in order to continue the job formerly done by the distribution station which was located at 51 Dinh Tien Hoang Street and which belonged to Imex-Saigon. It must be said that the organizational method and personnel of the present GDS are different from those of the former distribution station in Dinh Tien Hoang Street. Our station has established contracts not only with the Laser Express Corporation in Canada but also with the Vina-Paris Corporation in France and with certain overseas Vietnamese corporations in Japan, West Germany, Australia...Thus, we distribute goods sent to Ho Chi Minh City through the medium of these corporations no matter whatever their origin.

/DAT VIET/ Will you please tell us about the volume of goods.

/GDS/ In the past, goods from Canada amounted to more than 70 percent of the total volume of goods received. Since a few months, the volume of goods sent home through the Vina-Paris Corporation has grown bigger than in the past. Our station has been distributing about 250 to 300 packages each day and it can distribute more than the present number.

A week is the longest time it takes us to solve problems from the day we receive the goods to the day we distribute them. Immediately after carrying goods from Tan Son Nhat Airport to our office, we start sorting them out and compiling the relevant documents. If the goods recipients reside in the Ho Chi Minh City, we will order our liaison team to go and directly hand goods withdrawal notices to them; if they live outside the city, we will mail the notices to them. In the notices, we always specify the day and time for the recipients to come to take delivery of goods. Armed with the notices and some essential documents such as citizen certificates, customers come to the station, present these papers, pay storage fees, receive the goods, verify them and sometimes have to pay tax to the customs authorities. Our work is relatively simple. Almost all problems are solved in less than 2 hours. In special cases when customers do not possess citizen certificates or when their names and ages are not fully accurate, we try to solve their problem in a flexible manner while making sure that the goods are delivered to the right recipients.

/DAT VIET/ Some people said there have been losses of goods received from this station.

/GDS/ After carrying out activities for 4 months, our station has uncovered the following special cases: some packages of merchandises had been stolen (we immediately opened an inquiry and solved these cases) and a number of packages had been torn (and perhaps part of their contents lost) before reaching our station. We drew up official reports on the spot. There were some instances when customers claimed that the goods received did not exactly match the lists given in their [overseas] relatives' letters. In these cases, we presumed that the senders might not have specified all types of goods very accurately and that sometimes they listed their exact quantities and sometimes not. In short, ever since our station started working, real cases of loss can be counted on the fingers of one hand. [DOAN KET footnote: Investigations by DOAN KET revealed a number of cases of extraction of goods (especially western medicines) from packages in July 1981. A number of cases of loss or substitution occurred in September 1981. However, the ratio of loss or substitution of packages in each consignment batch was not high--not more than 5 per thousand. Of course, the Vina-Paris Management Board had indemnified its customers according to regulations.]

We must add that GDS has paid great attention to the working manner of its personnel. For example, we have clearly ordered our employees to treat customers courteously and we have told them that the carriers of goods withdrawal notices are forbidden to receive "tips" from the relatives of overseas Vietnamese and that the employees working at the station are not allowed to make their addresses known to customers. All that is aimed at preventing bribery and underhand dealings.

[DAT VIET] A number of customers have complained about the too high tax.

[GDS] The tax had been fixed by the customs service. GDS has no hand in it. As far as we know, it is true that recently the city has imposed a higher tax on certain consumer goods and luxury articles. However, the tax on staple goods such as western medicines has not increased.

[DAT VIET] Please give some concrete examples.

[GDS] We confirm what we have said, which is based solely on our own experience but does not fall within our competence. For instance, 1 meter of French silk is now subjected to a tax of 15 dong instead of 5 dong as in the past, a Dutch beauty cream box is taxed 20 dong instead of 10 dong as in the past, a pair of "jeans" of ordinary quality is taxed 45 dong instead of 9 dong as in the past and a Peugeot bicycle 2,400 dong instead of 800 dong as in the past.

[DAT VIET] Finally, does GDS have any suggestions to make to overseas Vietnamese who send goods home?

[GDS] We have two principal suggestions: First, the more solid the goods containers, the better and it will be much better if they are fastened with strings If they do not contain cakes and candies, there will be less risk of spoilage. Second, the sender must take some time filling in all details on three forms: goods withdrawal notice, shipping bill and goods statement. If all these documents are made out, relatives in Vietnam will be able to receive goods much more quickly and easily. The Laser Express Corporation in Canada has applied a very good working method. To spare his relatives and us worries and inconveniences, the sender must exactly declare all the goods to be consigned, no more no less.

INTERNATIONAL RELATIONS, TRADE AND AID

BRIEFS

NORWEGIAN COMMUNIST PARTY--Hanoi, December 3 (VNA)--The Central Committee of the Communist Party of Vietnam today sent a message of greetings to the 17th congress of the Norwegian Communist Party, saying: "Over the past years, despite many difficulties and obstacles your party, together with other democratic, progressive forces, has been struggling tirelessly against imperialism and capital monopoly in Norway, for the vital interests of the Norwegian people. Your party, advancing in the van, is taking an active part in the campaign by progressive and peace-loving forces in the country against the deployment of medium-range missiles in western Europe, for demanding for an atomic-free zone in the Scandinavian countries. The Communist Party and people of Vietnam highly value the revolutionary spirit of the communists in Norway and wish you new and bigger success. "We sincerely thank the communist party and other democratic and progressive forces in Norway for your warm support for our people in building and defending our country and for your contributions to maintaining and developing the friendship and solidarity between the peoples of Vietnam and Norway. "May this friendship and solidarity consolidate and develop incessantly." [Text] [OW031950 Hanoi VNA in English 1501 GMT 3 Dec 81]

SRV FRIENDSHIP DELEGATION--Hanoi, December 1 (VNA)--A delegation of the Vietnam-Laos Friendship Association led by its president Tran Huu Duc has left here for Laos. The delegation will attend the sixth anniversary of the Lao People's Democratic Republic (December 2). [Text] [OW010845 Hanoi VNA in English 0823 GMT 1 Dec 81]

JAPANESE AMBASSADOR--Hanoi, December 1 (VNA)--Atsuhiko Yatabe, ambassador extraordinary and plenipotentiary of Japan newly accredited to Vietnam, paid a courtesy visit to national assembly chairman Nguyen Huu Tho today. The Vietnamese leader had a cordial conversation with him. [Text] [OW011535 Hanoi VNA in English 1529 GMT 1 Dec 81]

LENIN'S WORKS COOPERATION--Hanoi, November 27 (VNA)--A meeting was held here today in celebration of the Vietnamese-Soviet cooperation in publishing the complete works of V. I. Lenin in the Vietnamese language. The meeting was jointly sponsored by the Commission for Propaganda and Training and the Commission for External Relations of the Central Committee of the Communist Party of Vietnam, the Nguyen Ai Quoc Higher Party School, the Ministry of Culture, and Su That (Truth) Publishing House. Present were Hoang Tung, member of the CPV Central Committee and head of the Commission for Propaganda and Training, a Soviet delegation led by I. P. Karovkin, vice-chairman of the State Committee for Publishing, Printing and Book Distribution; and Soviet Ambassador B. N. Chaplin. [Text] [OW271745 Hanoi VNA in English 1537 GMT 27 Nov 81]

TANZANIAN AMBASSADOR DEPARTS--Hanoi, November 25 (VNA)--J. M. Lusinda, ambassador extraordinary and plenipotentiary of the United Republic of Tanzania, left here today, concluding his term in Vietnam. [Text] [OW252058 Hanoi VNA in English 1603 GMT 25 Nov 81]

OFFICIAL TO INDIA--Hanoi, November 24 (VNA)--Vietnamese Deputy Minister of Foreign Trade Dinh Van Tram visited the second international trade fair in New Delhi during his recent visit to India. He was guided in his visit by the president of the organizing committee of the fair in which 42 countries took part. During his stay in India, Dinh Van Tram was received by Indian Vice Minister for Foreign Affairs Eric Gonsalves and Vice Minister of Commerce D. (Hutxen). He expressed his high appreciation of the remarkable achievements made by the Indian people in economic development, and sincere thanks for their support and assistance to Vietnam. The two sides expressed their hope for further strenghtening of economic cooperation between the two countries. The Vietnamese official also called at several economic and trading establishments in India. [Text] [OW240713 Hanoi VNA in English 0657 GMT 24 Nov 81]

GDR LEADERS HONORED--Hanoi, November 22 (VNA)--Empowered by president of the Council of State Truong Chinh, Vietnamese ambassador to the German Democratic Republic Pham Van Kim has conferred Vietnam's friendship order of professor Hans-Joachim Boehme, minister of the G.D.R. higher and professional education, and on five G.D.R. universities and colleges, for their outstanding contributions to training scientific and technical workers for Vietnam. The friendship order and medal have been also conferred on nine other officials of the G.D.R. higher and professional education. Present at the presentation ceremony held on November 20 in Berlin were Guenter Behnhard, state secretary of the said ministry; Professor Nguyen Dinh Tu, alternate member of the Central Committee of the Communist Party of Vietnam and minister of higher and vocational education, now on a friendship visit to the G.D.R. Speaking at the ceremony, Ambassador Pham Van Kim and Minister Nguyen Dinh Tu expressed sincere thanks to the party, the government and the people of the G.D.R. for their great assistance to Vietnam, especially in training scientific and technical workers. So far, almost 4,000 Vietnamese scientific cadres with university, post graduate and intermediate degrees have been trained in the G.D.R. On behalf of the recipients, Professor Hans-Joachim Boehme expressed his joy to receive this high distinction from Vietnam and reaffirmed his continued efforts to help the Vietnamese higher and vocational education service train more highly qualified scientific and technical workers. [Text] [OW221853 Hanoi VNA in English 1516 GMT 22 Nov 81]

DELEGATIONS ARRIVE--Hanoi, November 21 (VNA)--A delegation of the propaganda and training board of the Central Committee of the Lao People's Revolutionary Party led by its vice chairman, Somlat Chanthamat, arrived here today on a friendship visit at the invitation of the Commission for Propaganda and Training of the Central Committee of the Communist Party of Vietnam. The delegation will report to Vietnamese party cadres and other people on the Lao revolution, on the occasion of the 6th National Day of the Lao People's Democratic Republic (December 2). It was welcomed by Nguyen Vinh, member of the party Central Committee and vice chairman of the host commission, and other high-ranking officials of the commission.

It was received today by Hoang Tung, member of the party Central Committee and chairman of the commission. Hoang Tung expressed the wish for further development of the special relationship between Vietnam and Laos and all-sided cooperation between the two parties. Earlier, a delegation of the Lao Ministry of Agriculture, Forestry and Irrigation led by Deputy Minister Khamouane Boupha had arrived on a visit at the invitation of Vietnam's Ministry of Forestry. It will visit establishments of afforestation and timber exploitation and processing, and discuss with the host ministry a programme of cooperation in the coming years. [Text] [OW211635 Hanoi VNA in English 1454 GMT 21 Nov 81]

INDIAN JURIDICIAL DELEGATION--Hanoi, November 20 (VNA)--The Indian juridicial delegation led by P. Shive Shanker, minister of law, justice and company affairs, left here yesterday after a week-long visit to Vietnam. The delegation paid tribute at the Ho Chi Minh mausoleum and visited the late president's home and office. It called on the Supreme People's Court, the Vietnam Lawyers' Association, a number of economic and cultural institutions in Hanoi and Ho Chi Minh City in Lang Son it was able to see evidence of the crimes perpetrated by Chinese expansionism against the Vietnamese people. Talks were held between the Indian Ministry of Law, Justice and Company Affairs delegation and a delegation of the Vietnamese Ministry of Justice. The two sides exchanged views on professional matters and discussed measures to promote relations between the two ministries for further enhancement of the solidarity and friendship between India and Vietnam. [Text] [OW201606 Hanoi VNA in English 1457 GMT 20 Nov 81]

SRV, GDR EDUCATION AGREEMENT--Hanoi, November 19 (VNA)--Vietnam and the German Democratic Republic have signed an agreement on education from 1981 to 1985. The agreement, which provides for cooperation in training scientific personnel, in teaching the Vietnamese and German languages, etc., was signed in Berlin by Vietnamese Minister of Secondary Vocational and Higher Education Nguyen Dinh Tu, and GDR Minister of Higher, Technical and Professional Education Hans-Joachim Boehme. CUBAN ARMED FORCES DAY--Hanoi VNA 2 Dec--Colonel Lazaro Felino Gonzalez, military attache of the Cuban Embassy in Vietnam, gave a reception here this evening to mark the 25th anniversary of Cuban's revolution armed forces day (2 December). Cuban Ambassador Faure Chomon Mediavilla attended. The guests included Senior Lieutenant General Le Trong Tan, member of the Communist Party of Vietnam Central Committee, vice minister of national defence, and chief of the general staff of the Vietnam People's Army; Hoang Anh Tuan, vice foreign minister; and ambassadors, charges d'affairs in interim and military attaches of foreign embassies in Hanoi. Colonel Lazaro Felino Gonzalez and Senior Lieutenant General Le Trong Tan proposed toasts to the splendid victories of the Cuban people and their revolutionary armed forces, and to the development of the militant solidarity and fraternal friendship between Vietnam and Cuban. A film on Cuban revolutionary armed forces in training was screened afterwards. [Text] [OW041141 Hanoi VNA in English 1545 GMT 2 Dec 81]

SOVIET MOLDAVIAN EDUCATION DELEGATION--Hanoi, VNA 2 Dec--The Soviet education delegation led by V. A. Kerdivarenko, minister of higher and special secondary education of the Moldavian Soviet Socialist Republic, left here today after a friendship visit. While here, the guests paid respects at the Ho Chi Minh mausoleum and visited the late president's home and office. They exchanged views with officials of the Vietnamese Ministry of Secondary Vocational and Higher Education on the training of personnel, and called at several scientific research centres and colleges. [Text] [Hanoi VNA in English 1542 GMT 2 Dec 81 OW]

EXHIBITION OF SOVIET BOOKS--Hanoi VNA 1 Dec--An exhibition of Soviet books opened here today in furtherance of an agreement on cultural cooperation between Vietnam and the Soviet Union. It is jointly sponsored by the Vietnam Ministry of Culture and the USSR State Committee for Publishing, Printing and Book Distribution. Present at the opening were Nguyen Vinh, member of the Central Committee of the Communist Party of Vietnam and vice-chairman of the Commission for Propaganda and Training of the party Central Committee; I. P. Korovkin, vice-chairman of the USSR State Committee for Publishing, Printing and Book Distribution; and Soviet Ambassador B. N. Chaplin. There were also Ounheuan Phoumsavat, Lao vice-minister of information, propaganda, culture and tourism, and Chey Saphia, Kampuchean vice-minister of information, press and culture, who are here for a Vietnamese-Soviet-Lao-Kampuchean conference on book publishing cooperation. On display at the exhibition are more than 2,800 book titles and newspapers, including works by Marx, Engels and Lenin, and translations of works by Ho Chi Minh and Le Duan. At a press conference held on this occasion I. P. Korovkin said that a vivid expression of the cooperation between Soviet and Vietnamese publication services was the recent publication of the complete works of V. I. Lenin in the Vietnamese language. Over the past years, he added, the Soviet Union has published 12 million copies of 266 Vietnamese books. [Hanoi VNA in English 1530 GMT 1 Dec 81 OW]

PARTY ACTIVITIES AND GOVERNMENT

LOCALITIES NEARLY COMPLETE ISSUING VCP MEMBERSHIP CARDS

Hanoi NHAN DAN in Vietnamese 28 Oct 81 p 1

[VNA News Release: "Dong Nai, Ben Tre and Vung Tau-Con Dao Special Zone Basically Complete Issuing VCP Membership Cards"]

[Text] In Dong Nai and Ben Tre Provinces and Vung Tau-Con Dao Special Zone, more than 90 percent of the party installations are issuing cards to party members, with 76-91 percent of the latter having received their cards. Through this card-issuing work, the quality of party members and installations has obviously been improved.

The party organizations of Vinh Cuu, Thong Nhat, Long Thanh and Xuyen Moc Districts (Dong Nai Province), while issuing party membership cards, have paid attention to raising political quality and the abilities to organize, manage, lead and motivate the masses in the productivity movement and regular work. In the party chapter of Phu Dien Village (Tan Phu District, Dong Nai Province), all of the party members who received their cards have been acting in an exemplary manner, adhering to the basic movement and properly fulfilling the production, distribution and circulation task. More than 30 party installations in the Bien Hoa industrial zone have strengthened their internal solidarity and enterprise leadership after having issued all party membership cards.

In Ben Tre Province, through its membership card-issuing work, it has consolidated and perfected all basic party organizations and chapters. Nearly 60 village and subward party organizations and 153 basic party organizations in sectors and services have gone from poor and average to good standing, with no more party chapters being rated poor. Many party organizations have been assuming good leadership over production, caring about the standard of living, consolidating the administration and properly carrying out military recruiting.

In Vung Tau-Con Dao Special Zone, although this is a newly-established unit where party members are transferred to from different places, the party organization has used the membership card-issuing work to perfect and consolidate its organizing capacity, mostly in subwards and villages. In Long Son Village, while the party chapter was issuing party membership cards, the masses criticized some weak aspects and a number of party members who had gone backward and lacked a sense of responsibility. Its party organization later perfected the chapter committee by replacing those members who had been backward and incompetent. As a result, the Long Son party chapter has so far become a strong one that enjoys the confidence of the people.

Many basic VCP committees and party chapter committees have been assuming leadership over agricultural and fishery development, caring about the standard of living and strengthening coastal security and defense.

PARTY ACTIVITIES AND GOVERNMENT

MODELS, DISCIPLINE IN PARTY ORGANIZATIONS DISCUSSED

BK241002 Hanoi Domestic Service in Vietnamese 0400 GMT 23 Nov 81

[Text] In past years, many provinces and municipalities have adopted fruitful measures and activities to intensify leadership over the tasks of developing models and maintaining discipline in various basic party organizations.

Ho Chi Minh City and Long An and Dong Thap provinces have expanded these tasks broadly to the party chapters of villages, subwards, districts and precincts, and to the party organizations of various factories and agencies. Phu Nhuan District of Ho Chi Minh City has disseminated the tasks to all the grassroots-level party chapters. Ho Mon District has done the same to 90 percent of the grassroots-level party chapters.

The party chapters in Can Duoc, Vam Co, Can Giuoc and Ben Thu districts and Tan An town of Long An Province have adopted measures to maintain discipline and have contributed to making the basic party organizations increasingly firm, strong and wholesome.

The party chapters of My Binh and Hoa Phu villages in Vam Co District, and of the fourth subward in Tan An town are among those party chapters which have initially adopted the four required measures to develop models and maintain discipline, improving the implementation of their political duties and their party development tasks.

Ho Chi Minh City and Dong Thap Province have further organized guiding centers in villages and factories to draw upon experiences in providing guidance for models of various party chapters in the villages, subwards, factories and primary installations.

The party committee of Hoang Lien Son Province has inspected the party development movement in the province. The inspection reveals that the basic party organizations have obtained some initial results in further increasing the militancy of party organizations and the quality of party members which exert good effect on the promotion of local political duties. However, the improvement has not been uniform--especially in some grassroots-level units--the movement has not developed well following the issuance of party membership cards.

Considering these facts, the provincial party committee has urged the leaders of guiding centers to provide general guidance by drawing upon their own experiences. There must be a member of the provincial party committee in charge at each echelon. The committees of organization, propaganda and training and the inspection committees at all echelons are dutybound to coordinate with one another to help the provincial party committee echelon closely lead the tasks of developing models and maintaining discipline.

In Hau Giang Province, the party committee recently held a conference to disseminate the tasks of maintaining discipline and organizing the grassroots-level installations in districts and villages, and to discuss measures to implement them. The conferrees heard four reports from the party chapters of Binh Thanh village of Phong Hiep District, Tan Hung village of Long Phu district, Trung Nhat village of Thot Not district and Xuan Khanh subward of Can Tho City. These party chapters have begun to draw upon their experiences in guiding the implementation of the tasks. On the basis of these initial experiences, the provincial party committee plans to provide general guidance to basic party organizations in the province.

The party organization of Cau Duong brick and tile factory in Hanoi has derived a realistic lesson from the struggle of criticism to maintain party discipline firmly. Formerly, the role of party leadership and the determination of party members to surge forward was declining. The factory failed to fulfill its annual plan for several successive years. The factory's party committee met to discuss the problem and decided to use self-criticism and criticism within the party organization in order to step up the movement.

Owing to the vigorous struggle of advanced party members and specific guidance of Dong Anh District Party Committee, the erring party members have been made aware of their shortcomings, their sense of criticism and self-criticism has enhanced and the party organization has strengthened gradually. As a result, since 1969, the factory has always fulfilled its annual plan and has received five labor medals.

Dong Anh District Party Committee previously selected the Cau Duong brick and tile factory's party organization as the first unit in the industrial complex to guide the issuance of party membership cards experimentally. Now, this organization has been used again to lead the implementation of circular No 722 of the party Central Committee department of inspection on the tasks of developing models and maintaining discipline in basic party organizations in order to disseminate experiences among the grassroots-level party chapters in the district.

PROGRESS ON 'NEW LIFESTYLE CAMPAIGN IN THE SOUTH' SLOW

Hanoi QUAN DOI NHAN DAN in Vietnamese 16 Sep 81 p 1

/VNA News Release: "Intensifying the Guidance of the New Lifestyle Campaign in the South"/

/Text/ Recently, in Ho Chi Minh City, the new lifestyle campaign guidance committee of the Central Committee met with the guidance committees of the southern provinces and municipalities from Thuan Hai southward to review the situation surrounding the new lifestyle campaign and discuss measures for intensifying the guidance of this campaign in the coming period.

Since liberation day, the face of society in the provinces and municipalities of the South has undergone many changes. Since the issuance of Secretariat circular number 113 on establishing the new lifestyle throughout the country, the provincial party committees, municipal party committees and people's committees of the provinces and municipalities of the South have concerned themselves with guiding the effort to establish the new lifestyle; many provinces and municipalities have established guidance committees and the movement to establish the new lifestyle has been maintained and developed.

However, the movement has not developed uniformly nor continuously, it has not had a strong impact in the effort to limit the negative phenomena in life and it does not have the participation of the mass of sectors, mass organizations and social forces. The provinces and municipalities still place heavy emphasis upon opposing that which is wrong while giving light attention to building that which is correct; they have not generated broad public opinion in support of the new, the civilized and the progressive or criticizing that which is old, backward, outmoded, half native-half foreign and rude.

In order to accelerate the new lifestyle campaign in accordance with Party Secretariat circular 113 and closely coordinate it with the struggle to abolish the remnants of the reactionary, decadent culture, the conferees pointed out the jobs that must be performed in the coming period: establish a new lifestyle of order and public sanitation in the cities with special importance attached to establishing a civilized, civil lifestyle and beautifying the streets; in the countryside, efforts must be focused upon guiding the effort to establish orderly, sanitary, civilized and beautiful villages and hamlets. It is necessary to launch many phases of propaganda and agitation to abolish the old customs in weddings and funerals and eradicate superstitious beliefs in coordination with the struggle to abolish the remnants of the reactionary, decadent culture; establish families of the new culture that are harmonious, practice planned parenthood and set examples in complying with the policies of the party and state; establishing the socialist lifestyle of the citizen, primarily by mobilizing youths to serve as the nucleus and, in particular, combating drunkenness, which has become a widespread social ill in the southern provinces. While carrying out the new lifestyle campaign in the South, it is necessary to adhere to the following guidelines: being patient but positive, working gradually, completing one job at a time and eventually completing all the jobs; mobilizing the masses to denounce and criticize the old and establish the new; not employing crude, compulsory measures; mobilizing the effort to establish the new lifestyle in a manner that meets the requirements of daily life and is closely linked to the various campaigns within the locality; gaining the participation of the mass of social forces under the principle "the party leads, the government organizes and manages and the mass organizations implement."

MANAGEMENT, DISCIPLINE SEEN AS KEYS TO PRICE STABILITY

Hanoi NHAN DAN in Vietnamese 24 Sep 81 p 1

[Editorial: "Price Discipline"]

[Text] Improving prices is an important part of improving distribution and circulation, is an economic measure that is closely coordinated with other measures for the purpose of achieving the combined objective of maintaining and stabilizing the living conditions of the people, stimulating the development of production, raising labor productivity and stabilizing the market, the financial system and the monetary system. As the main form of expression of many different relationships, prices are an issue of major importance, one that has a comprehensive impact upon the economy, politics, society and everyday life. In the present economic situation, a situation still characterized by many changes, and until we reform all prices, gradually adjusting prices to be consistent with the actual situation and eventually establishing a new price system are very important, are matters with which every stratum of our people is concerned. To perform this work well, we must rely upon correct viewpoints and thinking.

The price policy as well as the other policies of the party and state concerning distribution and circulation are based on our economic line and the actual situation of our country, are consistent with the requirements of building the socialist economy. As General Secretary Le Duan pointed out, prices must first be based on production and must be formed within production in a planned manner in order to support production and stimulate the development of economic potentials, especially the potentials that lie in our labor and arable land, in order to create much wealth for society. Prices have the functions of helping to distribute and provide incentive for the use of material and financial resources in an effective and economical manner, establishing the correct relatiohships between accumulation and consumption, between industry and agriculture and between manual workers and farmers and participating in the international division of labor and cooperation, thereby meeting the requirements of the strategic tasks of the revolution well. Prices resolve the problem of distributing and redistributing national income, regulate the income of the various strata of the people in accordance with guidelines that benefit socialism and the working person and regulate the income of persons who earn unreasonably high or illegitimate incomes.

The adjustment of the present system of prices, from wholesale and purchasing prices to retail prices, is based on the fundamental viewpoint expressed above. It is truly incorrect to maintain that we should sell instruments of production to farmers at very low prices and set high purchasing prices, considering this to be a form of investment in agriculture, or vice versa, that we should sell industrial goods at very high prices and purchase agricultural products at low prices, considering this to be a measure that supports the accumulation of capital by the state. It would be even more incorrect to consider "free" market prices, which are formed in a spontaneous manner, to be the standard, to be the basis for setting state prices for the purchase or sale of goods. As a tool of planned economic management, the system of state directed prices is always established in accordance with the line and policy of the party and based on correct economic-technical foundations; they are never based on free market prices (which encompass the factors of profiteering and sabotage). The adjustment of the various types of prices and the establishment of a reasonable relationship between industrial goods and agricultural products are designed to insure that producers cover their production costs and earn a profit, to benefit both manual workers and farmers and, as a result, to provide incentive for accelerating production while creating the conditions for state-operated commerce to broaden the scope of its business and correct the problem of the state incurring very large losses. Once retail prices have been adjusted, the adjustment of wholesale prices and purchasing prices will not lead to another increase in retail prices on the organized market.

The state plan is a unified plan. The system of state directed prices is a unified system managed by the central level. While emphasizing discipline in production, we must also emphasize price discipline, and financial and monetary discipline. Without a decision by an authorized agency, the various sectors and localities may not establish or raise the prices of goods that are under the exclusive management of the state.

The struggle to stabilize prices and the market and improve distribution and circulation is an organized front. The corps of persons fighting on this front must win victory by means of management ability, organizational skills and high discipline.

NEW GRAIN DISTRIBUTION POLICY EXPLAINED

Grain Distribution Examined

Hanoi LUONG THUC THUC PHAM in Vietnamese No 7, Jul 80 pp 3-6, 22

[Article by Nguyen Bang Phi: "Concerning the Distribution of Grain"]

[Text] Grain is the most basic need in the life of each person. During the period of socialism, every member of society receives grain through one form of distribution or another based on the amount and the nature of the work performed by him.

In the Soviet Union and the other developed socialist countries, production, in general, and agricultural production, in particular, have developed. Many countries have an average grain consumption of roughly 1 ton per capita per year and not only satisfy their own people's need for grain both quantitatively and qualitatively, but also have ample grain for livestock production. As a result, the distribution of grain is no longer a "difficult" problem.

In our country, the amount of land under the cultivation of grain per capita is not high. Although we have climatic advantages in our favor and can raise crops throughout the year, floods and drought are always occurring; meanwhile, our material-technical bases are underdeveloped, even insignificant at some places, and every farm job is performed primarily with manpower. The population is growing rapidly each year. The income per capita is only about 250 kilograms of grain, in paddy equivalent, per year and only about 200 kilograms if we deduct losses, livestock production, grain used for seed and so forth. Attention must also be given to the fact that, when thinking about the distribution of society's grain, this low income is not evenly distributed between the North and the South, among the various localities within an area (the lowlands, midlands, mountains and so forth), among the districts of a province or even among villages and cooperatives.

With such a low and unbalanced income, how to distribute grain in a reasonable manner that insures that everyone has grain to eat, that no one is hungry so that everyone can devote their energies to production, to building socialism and protecting the socialist fatherland is a very large and very important problem. The Party Central Committee and government have issued many directives and resolutions concerning the line and policies for resolving this problem. Recently, the Council of Ministers promulgated resolution 09-CP on the grain policy, which includes the matter of distributing grain. The resolution sets forth the matters pertaining to viewpoint and principles in the distribution and the management of distribution of grain: on the basis of developing production and putting the vast majority of the commodity grain produced into the hands of the state in order to provide grain for everyone who does not produce grain and establish increasingly large grain reserves of the state, it is necessary to "tightly manage distribution, practice thorough economy, implement the principle of distribution in accordance with labor and, through the distribution of grain, help to manage labor, establish the new division of labor, manage production, manage the market and social order and gradually establish the state's exclusive management of grain throughout the country."

On the basis of the positions set forth in the resolution, let us delve into and think about measures for providing grain to each type recipient that are consistent with the situation surrounding society's production of grain and the limited grain capabilities of the state at this time.

To begin with, farmers are the persons who not only produce grain for consumption by their family, but also have the task of producing grain for all of society. This is their responsibility and represents a very efficient division of social labor. Of course, they must satisfy their own necessary, reasonable needs for grain first. In accordance with resolution 09-CP, the foremost principle in the grain mobilization policy of the state is "strongly encouraging the development of production and encouraging cooperatives and farmers to make full use of arable land and make every effort to raise their labor productivity in order to increase the output of commodity grain, increase the income of cooperatives and farmers, stabilize and improve living conditions and create the conditions for advancing to large-scale socialist production." At the same time, the policy embodies the important principle of correctly meeting the requirements of both the state and the people. "On the one hand, farmers must have stable living conditions and actively engage in production; on the other hand, they must provide the state with grain for distribution to troops, manual workers and other laborers who do not produce grain." Within the agricultural cooperatives, in accordance with Ministry of Agriculture circular number 08 dated 5 May 1980, which provides guidance with regard to the implementation of Council of Ministers' resolution number 400-CP dated 5 November 1979, the correct implementation of the principle of distribution in accordance with labor (in terms of both value and grain) will satisfy the reasonable grain needs of laborers. A reasonable amount of grain will be distributed to those persons who have little or no labor and who lack grain. Persons who are elderly and frail, persons who are ill, persons who are disabled, persons who have no one to support them and so forth, persons engaged in cultural and social work, cadres attending school, women who have recently given birth and so forth shall receive subsidies from public funds. Thus, the distribution of grain within this segment of society is satisfactory and there are no problems requiring lengthy deliberation.

Secondly, there are the persons who must be distributed grain at supply prices and under stable standards. These are persons who live by means of wages, pensions, subsidies and so forth from the state and their legitimate dependents. These persons can be divided into the following three types:

Persons who are working for the state, who include the cadres and soldiers of the people's army; the cadres and soldiers of the people's public security force and national defense workers; the manual workers and civil servants who are included in the labor norms and wage funds of the state-operated enterprises and joint public-private enterprises; the cadres and personnel who are included in the staff norms of the professional administrative agencies from the central to the district levels; the cadres and personnel on the staffs of the revolutionary mass organizations from the central to the district levels who no longer participate in agriculture production.

Persons who are receiving pensions and regular subsidies from the state, who can include cadres, manual workers and civil servants (including cadres of the army and the mass organizations mentioned above) who are retired or convalescing, wounded and ill soldiers, in general, and persons who have served the revolution but no longer have the ability to work and reside in the municipalities, cities and other non-grain production areas; and wounded and ill veterans who have lost 60 percent or more of their ability to work and live in either the cities or the countryside. Students who are included under the training norms of the state at the colleges, vocational middle schools, trade training schools and formal cultural schools in the mountains who are members of the ethnic minorities in the highlands should also be included in this type while in school.

The dependents of manual workers and civil servants of the state, in general (including persons who have retired or are convalescing), who include fathers, mothers, wives or husbands who are elderly or disabled and unable to work and children who are still in general school and not of work age. Generally speaking, dependents must be persons who have resided with their families in municipalities, cities and other non-grain producing areas, who truly earn no income and who are supported by a manual worker or civil servant. Thus, parents who have reached retirement age and children who are not of work age but who truly have work to perform and earn enough income to support themselves are not considered dependents, especially persons who are merchants or earn their livings illegally.

As regards families in which only the wife or only the husband works for the state, it is necessary to examine how they earn their living, their main source of income and their actual living conditions in order to establish a reasonable amount of grain to be provided to their dependents.

In summary, in the present situation, the regular, stable distribution of grain at supply prices to the three categories of persons mentioned above absolutely must be carried out well both when allocating grain and selling grain. At this time, although the state is encountering numerous difficulties with grain supplies, the grain allocated to these persons on a nationwide scale and within each locality is not in short supply; everyone everywhere must display a high spirit of responsibility and provide very good service. However, in the process of allocating grain to this sector, particular attention must be given to one problem that frequently occurs, namely, the allocation of grain to the wrong recipient; this problem primarily occurs at worksites and enterprises that recruit persons in a hpahazard, unnecessary fashion from the grain producing sector and when cadres, manual workers and civil servants of the state bring their parents, children and so forth from rural homes into the cities and request that grain be allocated to them. We must explain to everyone that, in view of the difficult situation surrounding the grain balance of the state, it only creates additional difficulties for the state to bring persons from the countryside into the cities and request that the state allocate grain to them.

Thirdly, there are persons who must be supplied grain at supply prices based on the results of the implementation of two-way economic contracts; these persons include individuals, households, collectives and cooperatives--primarily cooperatives--who engage in production under the guidance of the state, sign and fully implement contracts for the sale of products, perform other contract work or perform a specific quantity of work for the state, such as constructing a building, constructing a section of road, etc.

Economic relations with the state encompass many sectors and trades, from fishing, salt production, vegetable production, the raising of industrial crops and so forth to the production of the goods of small industry and handicraft goods, including export goods and consumer goods used in the daily lives of the people; from transportation by water and land routes and manual, semi-mechanized and mechanized transportation to building, housing repair, road repair and so forth in the municipalities and cities. In the countryside, generally speaking, these jobs are performed by the agricultural cooperatives as a sector of the cooperative and, of course, grain is distributed by the agricultural cooperative. However, there are also some cooperatives that produce highly technical products on a large scale and have many members but to which agricultural cooperatives are unable to distribute grain; this is a separate problem in need of research.

The quantity of grain involved in computing the contracts for persons who have economic relations with the state can be based on the ration supply standard for state manual workers after reducing it in accordance with Premier's decision 134-TTg dated 25 April 1980 for laborers and the standard for the dependents of manual workers and civil servants of the state for the persons dependent upon them. When calculating the amount of grain to be supplied to them, attention must be given to deducting the amount of grain produced by them under the guidance of the state, if any. The actual amount of grain supplied to them must not be based upon calculations contained within contracts, but upon the actual results of the implementation of their contract; they must fully and scrupulously implement their contract and not violate policies in order to be supplied with all the grain stated within their contract; if they fail to fulfill their contract, the amount of grain supplied to them will be reduced correspondingly and might even be eliminated.

The persons mentioned above, both collectives and individuals, have long been supplied grain by the state under stable standards in the same way cadres, manual workers and civil servants of the state have; however, they only sell a portion of the products sold to the state, only sell a small portion of some products sold to the state and, at some places, sell nothing to the state. Now that manual workers and civil servants are encountering many difficulties in numerous areas of their daily lives, especially with food, supplying grain by the method mentioned above not only makes it possible to effectively manage the grain of the state, but also helps the various sectors firmly control products and commodities through purchases, especially food products (fish, vegetables and so forth) for supply to manual workers and civil servants of the state, thereby helping to resolve the difficulties being encountered by them with regard to their daily meals.

Fourthly, there are persons who were once supplied grain under stable, permanent standards but who do not work for the state now and do not have economic relations with the state. These persons include cooperatives, even high level cooperatives, that are producing and marketing their own products instead of selling them to the state; a portion of a cooperative that has economic relations with the state but does not participate in producing products for sale to the state (it produces products that are not sold to the state); an entire household that does not work for the state and does not have economic relations with the state; a number of persons within the family of a cadre or a family that has economic relations with the state who do not participate in producing products for sale to the state, who are lazy, who do nothing or who perform jobs that are not encouraged. These persons perform many different jobs, from manual production and jobs in the service trades to various types of commerce; generally speaking, however, their incomes are dozens of times higher than the incomes of manual workers and civil servants of the state. At present, in view of the fact that the manual workers and civil servants of the state and many other necessary laborers are encountering many difficulties in their daily lives, difficulties that the state has been unable to resolve, it is necessary to reduce the grain ration standards of these persons. As regards persons who do no work for the state at all, who have no economic relations with the state and for whom actual conditions prohibit the state from maintaining the policy of supplying grain under stable, permanent standards for everyone, we can only sell grain in accordance with the capabilities of the state, that is, only sell whatever grain is available at the time.

With regard to prices, resolution 09-CP clearly states: "Because state grain must be purchased at two prices, it should also be sold at two prices"; the grain allocated for sale to the persons mentioned above is purchased at negotiated prices from farmers. At a time when these persons earn a high income, have surplus money and squander their money continuously in a manner inconsistent with the unbalanced budget of the state, is it reasonable for the state to continue to sell them grain at supply prices and continue to incur a large loss? Thus, it is necessary to sell grain to them at business support prices in order to reduce the loss incurred and reduce some of the difficulties with the state budget. Only the cases of a few poor laborers should be carefully examined and, if they are found to be truly poor, we can maintain the present supply level.

In summary, selling grain to persons who do not work for the state, who have no economic relations with the state in accordance with the grain supply capabilities of the state and at business support prices conforms with both reason and sentiment and is understood by many persons. However, there are some persons who, because their personal interests are involved, have reacted to this decision, including some persons who have reacted strongly along class lines. When distributing grain, it is necessary to closely observe and resolve these cases in a calm manner, especially during the initial period.

Finally, there are the persons who have long obtained their grain through the "free" market, who include persons who are not distributed grain by an agricultural cooperative, persons who are not distributed grain by the state and persons in both sectors who are not distributed sufficient grain. In the North, before the South was liberated, the scope of the "free" market had been reduced, grain prices on the "free" market did not fluctuate much and the prices of other goods only fluctuated slightly, consequently, the living conditions of the people were relatively stable for a long period of time. However, in the South during the U.S.-puppet period, a free, war time capitalist market existed and commodity prices were chaotic. After liberation, especially after the reunification of the country, the markets in the two zones of the country began to have an impact upon one another; although we have adopted the policy of gradually reducing its scope, the "free" market in grain is still very broad; on a nationwide basis, the flow of grain on the "free" market amounts to millions of tons annually. By means of various methods of speculation and profiteering employed on the market throughout the country, merchants selling grain have constantly pushed the price of grain upward and constantly keep it unstable, thereby posing a daily threat to the lives of persons who live in want, having an impact upon the prices of all other commodities and causing the people, especially persons who earn their livings legally, who are already encountering difficulties, to encounter more and more difficulties. This is the source of the new negative phenomena in economic and social life.

In order to resolve this problem, Council of Ministers' resolution 09-CP points out: "We must gradually struggle to pull down prices on the free market, gradually narrow the scope of the unorganized market and rapidly expand the socialist market in grain..." How can we gradually reduce the scope of the unorganized market and rapidly expand the socialist market in grain? Reducing the scope of the "free" market by means of administrative measures, as several places have done, will surely push prices even higher and adversely affect the lives of persons who live in want and many other areas of society. If we were to expand the socialist market in grain by expanding supply operations, the state would be unable to supply the necessary grain and would continue to nurture the attitude of relying upon the state; at the same time, this would not help to eradicate the negative phenomena and might even cause additional ones to emerge. Therefore, the best measure for implementing the policy of narrowing the scope of the unorganized market and rapidly expanding the socialist market in grain, besides the systems distributing grain to the recipients mentioned above, is for the localities to rapidly establish grain business organizations that are truly what they are designed to be, commerce organizations, and have the primary purpose not of earning a profit but of bringing prices down, stabilizing the market, stabilizing the monetary system and stabilizing living conditions, in general. Suitable grain business organizations can be corporations or stores. Their size must be determined totally on the basis of the volume of their business and preventing the state from having to compensate for losses. They should purchase grain from everyone who has grain to sell, primarily in the areas that produce much commodity grain (after farmers have fulfilled their grain obligations to the state but still have surplus grain) and must purchase grain by many different ways, through existing purchasing organizations or directly; they can also use marketing cooperatives and even some small merchants to purchase grain. They can purchase grain at other places, if deemed necessary. As regards sales, they can sell grain to everyone who needs grain at necessary places but must primarily sell grain at places where the need is concentrated, at commodity trading centers, especially the municipalities and large cities. The purchasing prices of this grain, although negotiated, must be kept within certain limits in order to avoid being passive in the face of private merchants pushing prices upward. As regards selling prices, the principle is that they should not be higher than market prices and not much lower than "free" market prices and absolutely must not result in losses.

Thus, the amount of grain sold is not an important question; however, each specific market must keep abreast of changes that influence the prices and activities of private merchants in order to determine how much should be sold and determine selling prices. Here, it is necessary to guard against incorrect tendencies, especially the thinking of impetuously lowering prices and setting low selling prices, which would uselessly deplete our forces.

This method of buying and selling should be an economic measure for managing the market, leading prices and leading private merchants. It is the primary measure but because the organization involved is a state-operated commerce organization, the governments on the various levels can use their dictatorship function to guide these business organizations and help them perform the task assigned to them.

In order for the above mentioned grain business organizations to fulfill their task of expanding the socialist market, reducing the scope of the "free" market in grain and gradually pulling prices downward, they must be allocated capital, be able to borrow money from the bank and be able to borrow some grain from the balance of the state for use as initial capital, grain which should be deducted from the norm on the grain sold at business support prices.

This is an important matter that must be carefully examined in the distribution of grain, is an important matter in market and price activities and can be the key matter in the lives of laborers, especially manual workers and civil servants at this time; if done well, it will have an impact in many areas.

If the understanding of the grain distribution policy based on resolution 09-CP presented above is correct, the good implementation of this policy will not only increase the effectiveness of the state in managing the distribution of grain, but will also have an impact upon economic management in some areas. However, it is very clear that there are now many new points concerning the distribution of grain and possible points in the implementation of this policy that are totally contrary to our practices and methods of operating over the past several decades and that conflict with the material interests of many persons, including some cadres, manual workers and civil servants whose family members will not be supplied grain the way they once were. An inevitable struggle must be waged to overcome incorrect thinking, overcome the desire to maintain the old subsidies and achieve the full impact of the important economic levers in the distribution of grain with a view toward supporting and stimulating the development of production in keeping with the state plan, thereby helping to manage labor and establish the new division of labor, limit negative phenomena and reduce the present difficulties being encountered with grain.

Grain Losses in Transportation Described

Hanoi LUONG THUC THUC PHAM in Vietnamese No 8, Aug 80 p 3

[Article by Nguyen Van Xuyen, deputy head of the Warehouse and Transportation Department: "The Management and Protection of Grain in Transportation"]

[Excerpts] The transportation of grain is an important part of the activities involved in the distribution and circulation of grain.

In the recent past, there have been many negative phenomena, especially the theft of grain in transportation, which have caused major losses to the state. In 1977, the quantity of grain lost in river transportation amounted to 7,850 tons; in 1978, 2,320 tons were lost; in 1979, 2,650 tons were lost; on the average, more than 10 percent of each grain shipment is lost. The losses and shortages of grain in highway transportation are also rather widespread and, in some cases, serious; shortages of grain occur on nearly 70 percent of truck shipments; there was one truck driver who sold his entire shipment... The quantity of grain lost in transshipment through seaports is also rather large: between November 1973 and August 1979, the port of Haiphong recorded a shortage of 2,579 tons [sic]; in October 1979, it recorded a shortage of 250 tons; at Ben Thuy (Nghe Tinh), the quantity of grain lost in July 1979 amounted to 15 percent of the total quantity of grain shipped through the port.

Article Outlines Calculation of Grain Obligations

Hanoi LUONG THUC THUC PHAM in Vietnamese No 8, Aug 80 pp 42-44

[Unattributed article: "Understanding Council of Ministers Resolution 09-CP on the Grain Policy"]

[Text] The Portion of the Resolution Dealing with the Grain Mobilization Policy

1. The specific elements and bases for establishing stable tax obligations and obligations to sell grain through two-way contracts.

The general spirit of resolution 09-CP that must be thoroughly understood is that in order to insure the successful collection of taxes and the successful purchasing of grain, it is first necessary to focus efforts on guiding the plan and policy for comprehensively developing agricultural production, the center of which is grain and food production, in keeping with the spirit of the resolution of the 6th Party Plenum.

Paying agricultural taxes in the form of grain and selling grain at directed prices through two-way contracts have been established as the obligations of our agricultural cooperatives and private farm families and have been stabilised for a period of 5 years beginning in 1980. These obligations are assigned on the basis of the absolute quantity of grain produced in 1 year and remain unchanged for a period of 5 years. If cooperatives and farm households actively engage in production, practice multicropping and increase the output of grain, the state will not increase their obligations; if they suffer serious crop losses and if numerous difficulties are encountered in the daily lives of cooperative members and farmers, the state will examine their case and waive or postpone the fulfillment of their obligations.

--The basis of computation for establishing the level at which tax obligations and the obligation to sell grain through two-way contracts is stabilised is "the amount of farmland under the cultivation of grain in 1978 and the average grain during a period of 5 years in the North (1974-1978) and 3 years in the South (1976-1978) (computed on the basis of soil areas with similar levels of fertility)." In addition to this common base, when making computations, attention must be given to the average amount of farmland per capita, to the ability to produce commodity grain and to the situation surrounding living conditions in order to correctly establish the obligation to sell grain through two-way contracts.

--The amount of farmland under the cultivation of grain in 1978 referred to here is the amount of farmland used exclusively for the cultivation of grain or planted primarily with grain crops as established through an on-site investigation conducted in 1978 in accordance with Council of Ministers' decision 169/CP dated 24 June 1977 and Statistics General Department decision 339/CP/DTRD dated 27 August 1977. As regards this matter, attention must be given to the fact that land which was once under the cultivation of grain but was allowed to lie fallow for some illegitimate reason must also be included in the grain obligation in order to encourage cooperatives and cooperative member farmers to make full use of all land used to raise grain and not allow land to lie fallow, except when natural disasters and enemy attacks make it impossible to cultivate this land. Land that is primarily under the cultivation of industrial crops but is temporarily being used to raise companion grain crops must not be included in the grain obligation, but the industrial crop obligation.

Of the land under the cultivation of grain, that land which is allocated for livestock production in accordance with Council of Ministers' circular 291-TTg dated 19 May 1978 is not included in the amount of land under cultivation on which the grain obligation is based; rather, a quantity of livestock products corresponding to the amount of area under cultivation and the grain output from this land must be produced to fulfill obligations.

--The average yield per year is the average farm yield or crop yield per year during a 5 year period (1974-1978) in the North and a 3 year period (1976-1978) in the South. Thus, at places at which the farm yield has been established, farm yield is the figure that is used. At places that have only determined their crop yield, crop yield must be computed for each type crop from 1974 to 1978 in the North and from 1976 to 1978 in the South and computed as an average crop yield per year.

--When computing average yield by area, it is necessary to rely upon two factors: the fertility of farmland and farming conditions. When the levels of fertility and farming conditions are the same, yields are the same.

Generally speaking, yields must be determined by area. At places at which farmland has been zoned, yields must be calculated by area; that is, if the land under the cultivation of grain of cooperatives and private farm families within an area has similar fertility, if water conservancy conditions are the same, if investments by the state are the same and so forth, average yields are the same. Depending upon the conditions at each place, an area can be large or small. There might be two or three different types of farmland (grade 1, grade 2 and so forth) within an area and each type might produce a different yield. Establishing yield by area has the effect of encouraging intensive cultivation to increase crop yields; skilled farmers receive that portion of their crop that exceeds their average yield while those who perform poor work must make a greater effort. Attention must be given to places at which production is primarily carried out by private individuals, where an effort must be made to determine yield by area in order to avoid complications when computing the output to be contributed by each household to the grain balance.

--The output that is used to determine the stable grain obligation is the output from the land under grain cultivation that was investigated in 1978 multiplied by the average yield per year in each area as mentioned above. At places that have determined their average farm yield, output is multiplied by the farmland that was investigated; at places that only determine their crop yield, output is multiplied by the land under cultivation that was investigated. This output is computed on the basis of the actual average yield and the actual amount of land under crop production that was investigated, consequently, it is not an unrealistically high output.

--The stable grain obligation (which includes both taxes and purchases under two-way contracts) assigned to cooperatives and private farm families consists of the total obligation for the entire year and a specific obligation per hectare of farmland; this figure minus taxes is the amount of grain that must be sold under obligation through two-way contracts.

In order to determine the total grain obligation for the entire year, it is necessary to know two requirements: the grain requirements of the state and the grain requirements of farmers; it is also necessary to thoroughly implement the general principle that those who produce much, contribute much but also have much to use and earn a high income while those who produce less, contribute less, have less to use and earn a lower income.

2. Land allocated for collective livestock production.

In accordance with the policy, 10 to 15 percent of farmland is to be allocated for collective livestock production. This land need not be taken from land used to raise grain; rather, depending upon the species of livestock being raised (hogs, buffalo, cattle, chickens, ducks and so forth) and depending upon the livestock production conditions at each place (places that only have paddies, places that have swamps, lakes and ponds, places that have many hills and so forth), suitable land may be allocated to raise feed crops in accordance with the requirements of livestock production, which include grain crops, vegetable crops, the raising of fish and so forth. As regards the grain produced on this land, as livestock production develops, a corresponding amount of grain must be deducted from the grain obligation. Grain that is allocated for livestock production but is not used to fulfill the meat obligation must be sold to the state at directed prices and is considered to be outside the stable grain obligation. Once land under the cultivation of grain has been allocated for livestock production, it is necessary to guard against a situation in which the number of hogs being raised does not increase, the obligation to sell meat to the state is not met, the output of grain and other crops does not increase correspondingly and the obligation to sell grain to the state is not fulfilled.

3. The various types of subsidiary food crops in paddy equivalent.

1 kilogram of dried corn = 1 kilogram of paddy
1 kilogram of dried potatoes or cassava = 1 kilogram of paddy
3 kilograms of fresh potatoes or cassava = 1 kilogram of paddy
3 kilograms of western potatoes = 1 kilogram of paddy
1 kilogram of dried kaoliang = 1 kilogram of paddy

4. The specifics involved in signing two-way economic contracts.

Council of Ministers' resolution 09-CP stipulates: "The obligation of cooperatives and farmers to sell grain or other agricultural products to the state has been stabilised and the state has stabilised the quantity of supplies and goods supplied in return to cooperatives and farm families."

--Implementing two-way economic contracts is the obligation of both sides and reflects equality in the economic relations between units and individuals that produce grain and purchasing agencies.

The quantity of grain that cooperatives and farmers pledge under contracts to sell to the state is their stable grain obligation for the year; it remains the same for a 5 year period and includes paddy, corn, sweet potatoes, cassava, kaoliang and western potatoes.

The supplies and goods supplied by the state to cooperatives and farm families consist of instruments of production, building materials and essential consumer goods. An effort must be made to stabilise the level of supply during 1 year and maintain this level for 5 years on the basis of the ability of the state to distribute goods to the locality and on the basis of goods produced by the locality itself in a manner consistent with the requirements of farmers and consistent with the rates of exchange stipulated by the state for the following primary materials:

--1 kilogram of urea corresponds to 3 or 4 kilograms of paddy;
--1 kilogram of standard SA nitrogen corresponds to 1.5-2 kilograms of paddy;
--1 kilogram of superphosphate corresponds to 1 kilogram of paddy;
--1 liter of gasoline corresponds to 4 kilograms of paddy;
--1 cubic meter of precious wood or group 4, group 5 or group 6 timber (in the South the wood used in the building of boats is the standard) corresponds to 1 ton of paddy;
--1 kilogram of cement corresponds to 1 kilogram of paddy;
--1 liter of diesel fuel corresponds to 2 kilograms of paddy.

As regards cloth, the standard is that 1 dong worth of cloth corresponds to 2 dong worth of paddy at average prices for cloth governed by type 1, type 2 and type 3 ration standards.

As regards a number of ordinary consumer goods, there are many items that will be converted into total value in order to establish a stable rate of exchange in money.

Services, such as plowing and harrowing by machine, pumping water, milling grain and so forth, that are directly provided by state-operated units and collectives to production units are paid for in products (grain or other agricultural products) at rates stipulated by each sector for each type of service.

Goods that come from sources of the central level and goods that are produced or imported by local industry are combined in one common fund in order to make purchases under two-way contracts. The commodity fund is under the unified management of the provincial and district people's committees, which directly guide distribution under the two-way plan to insure that the quantity of products purchased corresponds to the quantity of supplies and goods sold. No sector is permitted to take it upon itself to distribute the primary products mentioned above without purchasing in return a quantity of grain or agricultural products that corresponds to the plan.

--The signing and implementation of contracts:

Contracts can be signed for 1 year or 5 years (an amendment can be signed each year if necessary); contracts can also be signed and implemented for a few years for products of high value. For example, if a cooperative or private farm family needs to purchase some building materials in order to build a granary, drying yard or so forth, they can make payment in grain over three or four seasons.

The state supplies materials and goods in three ways:

The state supplies materials and goods in advance and cooperatives and farmers make payment for them in grain at harvest time;

The cooperatives and farm families sell grain first and the state supplies materials and goods later;

The state, cooperatives and farm families engage in direct trade at the same time, sell grain and buy goods at the same time.

Regardless of the method employed, it is necessary to display a high spirit of responsibility, respect the legal nature of contracts, insure fair payment and support the development of production well.

Circular on New Grain Policy

Hanoi LUONG THUC THUC PHAM in Vietnamese No 9, Sep 80 pp 43-48

[Official correspondence number 774-LTTP/CC dated 2 August 1980 to the people's committees and grain services of the provinces and municipalities: "Guidance for Implementing the Grain Distribution Policy in Accordance with Resolution 09-CP and decision 134-TTg"]

[Text] The Political Bureau of the Party Central Committee has issued a resolution that sets forth several positions and measures for resolving the difficulties now being encountered with grain; the Council of Ministers promulgated resolution 09-CP on 9 January 1980 and the Premier issued decision number 134-TTg on 25 April 1980 in order to resolve the current grain problem, primarily by making every effort to accelerate production, practicing thorough economy in the use of grain and tightly managing the distribution of state grain.

Having exchanged opinions with the various sectors, the Ministry of Food hereby provides guidance on several additional points in order to implement the above mentioned resolutions and decision concerning the grain policy.

A. The Persons To Whom Grain Is Distributed

I. The persons to whom grain is distributed at supply prices under permanent standards include:

1) Troops, armed public security personnel, people's public security personnel and national defense cadres and personnel.

2) Manual workers and civil servants who are working at state-operated enterprises, joint public-private enterprises and worksites and farms of the state, including members of their official staffs or contract forces who are employed on a long-term basis in accordance with labor norms approved by the state and announced by the Ministry of Food and who officially reside at the place at which they are working.

3) Cadres and personnel who are members of the official staff and are working for administrative agencies, professional agencies and revolutionary mass organizations from the district level upward and who have left agricultural production.

4) Shock youths who are performing tasks at worksites, farms and forestry sites of the state.

Persons in the above mentioned categories who quit their jobs for no reason or are fired are no longer to be distributed grain at directed prices.

5) Students who are included under the training plan norms of the state at colleges (including preparatory schools), vocational middle schools and trade training schools; students at formal cultural schools who are members of the ethnic minorities in the mountains and the students at worker-farmer supplementary education schools.

Pupils and students who quit school and students who graduate from school but refuse to accept the work assigned to them by the state are no longer included in this category.

6) Cadres, manual workers and civil servants of the state and cadres of the army and the mass organizations who have retired or lost the ability to work and are receiving permanent subsidies or whose subsidies have expired but their health has not been restored and they are no longer of work age.

7) Wounded veterans who are classified as seriously disabled (that is, the special category and category 1 in the resistance against the French and categories 5, 6, 7 and 8 in the resistance against the United States), some veterans wounded in the resistance against the United States who, although they are classified as category 4, have actually lost up to 60 percent or more of their ability to work and ill veterans who, generally speaking, have lost 60 percent or more of their ability to work and live in either the cities or the countryside.

Wounded veterans who are classified as slightly disabled (that is, categories 2, 3, 4 and 5 in the resistance against the French and categories 1, 2, 3 and 4 in the resistance against the United States) and ill veterans who lost less than 60 percent of their ability to work and live in the municipalities, cities and other non-agricultural production areas.

Wounded veterans in the agricultural production sector will continue to be distributed grain purchased under obligations by the state by their agricultural cooperative at directed prices as is being done now in keeping with the spirit of Council of Ministers' resolution 196/CP dated 16 October 1972.

8) Persons who have performed a service for the revolution and are now old and frail, no longer have the ability to work and live in the municipalities, cities and other non-agricultural production areas.

9) The parents, wives or husbands of war dead who have now become elderly and frail and are no longer able to work and children of war dead who have not reached work age or have reached work age but are still attending general schools in the municipalities, cities and other non-agricultural production areas.

Persons in categories 7 and 8, if they reside in an agricultural production area, will continue to be distributed grain purchased under obligations to the state by their cooperative at directed prices as is the case now.

10) The dependents of families in which both the wife and the husband are cadres, manual workers or civil servants of the state (including cadres within the army and the revolutionary mass organizations who are now working, have retired or lost the ability to work), who include: parents, wives or husbands who are no longer able to

work and children who have not reached work age or who have reached work age but are still attending general school, are being supported by the wages of manual workers and civil servants and who have resided with them in the municipalities, cities and other non-agricultural production areas prior to this time. Persons who have always resided in an agricultural production area will continue to be distributed grain by their agricultural cooperative as was the practice previously.

As regards families in the municipalities, cities and other non-agricultural production areas in which only the wife or only the husband is an army cadre or a cadre, manual worker or civil servant of the state, including persons who have retired or lost their ability to work, and the other person (either the husband or wife) works in a free trade, their dependents who are not of work age or are of work age but are still attending general school will, generally speaking, be sold grain at supply prices, except in the case of a wife, husband or child not of work age who participate in acts of speculation and hoarding, who will be sold grain at business support prices. In the case of a wife or husband who works in a free trade and earns a high income, this income is the primary source of income of the family and the people have questions about selling grain at supply prices to their dependents, the question of whether to sell grain to their dependents at supply prices or business support prices will be examined and determined by the provincial or municipal people's committee.

11) Cadres of the government or mass organizations who hold key positions in the subwards of the municipalities and cities, are part of the staff stipulated by the state and are currently working.

12) Persons who are disabled and no longer able to work, persons who have lost their mind, persons who are elderly and frail, no longer able to work and have no one to support them and orphaned children who have lost both their mother and father, have no one to support them and are not yet able to work to support themselves who live in the municipalities, cities and other non-agricultural production areas; persons who are receiving relief from the state and persons afflicted with dangerous diseases living together at medical treatment camps are also supplied grain at supply prices.

II. The Persons Who Are Distributed Grain at Supply Prices in Accordance with Two-Way Economic Contracts

The persons who are distributed grain at supply prices in accordance with the results of the implementation of two-way economic contracts consist of persons, households, teams, collectives and cooperatives, primarily cooperatives, that carry out production in accordance with the plan and under the guidance of the state, sign contracts to perform a service, sell products or undertake a volume of work for the state and scrupulously implement the contracts they sign and persons who are utilized by the state as purchasing and retail sales agents for state stores and who scrupulously comply with supply and marketing agent regulations.

Every person, every household and every collective, regardless of whether it is a high level cooperative or low level cooperative, that was supplied grain prior to this time but does not now sign a contract with or sell products to the state or fails to fully comply with the regulations governing purchasing agents and supply-marketing agents or fails to fully execute the contract signed with the state will no longer be allowed to purchase grain at supply prices.

The economic contract relations with the state take many different forms and encompass many different trades and sectors. In view of the fact that the state's supply of grain is limited, priority must be given in the supplying of grain at supply prices to individuals and collectives in accordance with two-way economic contracts with the state to the following trades and areas: the salt production trade and the harvesting of marine and aquatic products at centralized production sites; afforestation and the harvesting of forestry products, trades in small industry that produce export goods of high value or essential goods in the daily lives of the people; centralized vegetable growing areas around the large cities and industrial complexes; and centralized industrial crop areas.

The small industry and handicraft sectors in the countryside and in the outskirts of the municipalities or cities that produce technical products involving simple technology for local consumption or for consumption within a small area and that are usually closely linked to raw material sources, such as the building trade, the blacksmith trade, the ready-made clothing trade, small-scale pottery production, the production of woven bamboo and rattan products, rush mat production and so forth or that produce export products involving simple technology, such as corn husk rugs, bamboo blinds and so forth, will be put under the management of an agricultural cooperative as a trade sector and be distributed grain by the cooperative. If a cooperative has already delivered its grain to the state, the state will return the necessary portion of it.

The state signs two-way economic contracts with and supplies grain at supply prices to installations producing export goods or essential consumer goods on a nationwide scale or within a large area that belong to trade sectors that require complex technology, specialized labor and a relatively high level of cooperation, such as the production of ready-made clothing for exportation, the production of lacquerware, the making of inlays and carvings, the goldsmith and silversmith trades, the production of metal, earthenware or glass, the weaving of cotton cloth, silk or mosquito netting and the production of rush mats on a relatively large scale provided that the persons in these trades have been separated from agriculture for a long time, live in a traditional trade area and so forth.

As regards medium-scale installations which produce necessary consumer goods in a smaller area that require less complex technology and have been separated from agriculture for a long time but now have returned to an agricultural cooperative and are encountering many difficulties in their management, in expanding production, it is possible to maintain them as professional small industry production installations. The state will help guide their production; the cooperative must sell their products at market prices and purchase grain on the market or sell their products and purchase state grain at business support prices.

While waiting for the production management agencies to coordinate with the grain agencies, the labor agencies and contract purchasing organizations should research and formulate temporary labor quotas for each type product and temporarily establish the amount of grain to be sold at supply prices under two-way economic contracts with the persons mentioned above on the basis of the following principles:

a) On the basis of the grain supply standard for state workers in the same trade and the grain supply standard for dependents in the families of manual workers and civil servants, it is necessary to calculate the amount of grain to be included in two-way economic contracts with fishermen, persons engaged in salt production, handicraftsmen and their reasonable dependents.

b) On the basis of the eating standard of farmers who produce grain in the same area, it is necessary to claculate the amount of grain supplied under two-way economic contracts to vegetable growers and the producers of industrial crops.

On the basis of determining the amount of labor necessary and a reasonable number of assistants, the grain agency, in coordination with the purchasing and contracting agency, can determine the amount of grain to be sold under contracts to producers; however, the amount of grain that is actually sold must be based on the results of the implementation of the contract so that it corresponds to the quantity of products delivered or the amount of work performed.

Units and individuals that complete their plans for the delivery of products to the state or complete the work assigned to them under contracts shall be sold the full quantity of grain stated in their plan. If they fall short of their plan for the delivery of products to the state or fail to complete the work assigned to them under their contract, the amount of grain sold to them will be reduced by a corresponding amount. If there is a legitimate reason for their failure to complete their plan, such as natural disasters, enemy attacks or not being fully supplied with materials, the amount of grain sold to them shall be reduced by a lesser amount.

III. The Persons To Whom Grain Is Sold at Business Support Prices

In addition to the persons described under points I and II, who purchase grain at supply prices, the following non-agricultural persons who work in free trades and have no economic contract with the state (including the head of the family and his or her dependents) will be sold grain at business support prices:

1) Persons in collective small industry and handicraft trades and private, free producers who do not have an economic contract with the state or have an economic contract but fail, for no legitimate reason, to fully execute it.

2) Persons who work in the free service and repair trades, including production teams and cooperative teams that do not have economic contracts with the state.

3) Persons who work in the free transportation, cargo handling and building trades (including cooperative teams that do not have economic contracts with the state).

4) Merchants, persons who work in free commerce and persons who work in the free food and beverage trade (including cooperative teams).

5) Persons within a unit of a cooperative that has an economic contract with the state but who do not participate in the production of the products for which the contract was signed with the state but, instead, produce other products for the cooperative.

6) Persons who raise vegetables, flowers and ornamental plants on the outskirts of the municipalities and cities who have no economic contract with the state.

7) Persons in households that are distributed grain at supply prices and who have reached work age but work in a free trade.

The amount of grain to be sold and the price of grain sold at business support prices shall be determined by the Ministry of Food during each period of time.

B. The Temporary Adjustment of Some Grain Supply Standards

Premier's decision 134/TTg provides for the temporary adjustment of the grain supply standards of the various categories of persons to whom grain is distributed. Below, the ministry has only provided specific guidance concerning a number of additional points:

1) As regards cadres, manual workers and civil servants of the state:

While waiting for uniform categories of labor to be established so that grain can be allocated in accordance with unified, nationwide standards, the following temporary adjustments are in effect until a new order is issued:

a) Persons who are receiving grain under the monthly standards of 16.5 kilograms, 17.5 kilograms, 18.5 kilograms, 19.5 kilograms and 20.5 kilograms, in rice equivalent, will temporarily receive 1.5 kilogram less per month.

b) Persons who are currently performing jobs similar to those of the persons mentioned above but, instead of receiving the full ration mentioned above, are only receiving 16 kilograms, 17 kilograms, 18 kilograms, 19 kilograms or 20 kilograms of grain, in rice equivalent, per month will temporarily receive only 1 kilogram less per month.

In order to coordinate the distribution of grain with the management of labor at a production installation, the grain sector will compute standards for each type of labor for each installation and distribute grain on this basis; however, the enterprise director can distribute this grain on the basis of the number of days worked by each person and must not distribute grain to anyone who has quit his job for no reason.

2) As regards cadres, manual workers and civil servants who have retired or lost their ability to work, wounded veterans and ill veterans, the uniform nationwide standard is 13 kilograms of grain per month.

3) As regards persons who have performed a service for the revolution and the fathers, mothers, wives or husbands of war dead, the uniform nationwide standard is 12 kilograms of grain per month.

4) The dependents of families of cadres, manual workers and civil servants, especially children, will receive the same amount of grain they are receiving now. However, in order to eliminate unnecessary administrative procedures and reduce the need for cadres, manual workers and civil servants to travel, the adjustment of the standard for children will henceforth be made on a yearly instead of a monthly basis and will be made by the grain agency in December of the year so that children may begin to receive grain under their new standard in January of the following year.

5) Athletes in physical education and sports, actors, actresses, cultural entertainment performers and movie performers will continue to have the same standard, it will not be reduced.

6) Persons and units who have economic contracts with the state will be supplied grain as set forth in points a, b,and c in part II.

In the phase of the very urgent situation surrounding grain and while waiting for the quantities of grain to be included in two-way economic contracts to be calculated, it is necessary to temporarily reduce the total amount of grain being distributed by 10 to 15 percent. The people's committees of the provinces and municipalities will, on the basis of the specific conditions of each trade sector and each unit capable of producing grain or substitute food products, determine a suitable percentage by which the amount of grain distributed will be reduced.

6) The sale of grain to persons who are elibible for business support prices will not be carried out on the basis of the standards of occupation and age, but on the basis of an average amount of grain for each person depending upon the grain supply capabilities of the state as set forth above in part III.

C. Self-sufficiency in Grain

The Political Bureau resolution makes it obligatory upon each cadre, manual worker, civil servant, pupil, student and other non-agricultural production forces to produce from 1 to 3 months worth of grain. In keeping with this resolution, the various sectors and localities are actively guiding and organizing this effort; the movement to increase the production of grain in the non-agricultural sector is being accelerated.

In order to help overcome the difficulties being encountered with grain, every manual worker, civil servant, pupil, student and all other non-agricultural production forces have the responsibility of participating in the production of grain and food products and achieving partial self-sufficiency in grain. However, the amount of time during which each agency and unit must achieve self-sufficiency in grain must be determined on the basis of the work conditions and specific productio capabilities of each unit and each locality. Consequently, the manual workers and civil servants at professional and administrative agencies and in the indirect apparata of enterprises, worksites, state farms and forestry sites, the manual workers at state farms and forestry sites, the manual workers at enterprises who do not have work and the manual workers in the towns and cities of the mountain and lowland provinces must produce much more grain than the manual workers and civil servants at enterprises that routinely have work to perform or the manual workers and civil servants in municipalities and industrial complexes.

Under the guidance of the provincial and municipal people's committee, the grain services must hold detailed discussions with agencies, enterprises, worksites, forestry sites and state farms concerning specific plans for achieving self-sufficiency as well as specific plans for deducting the grain that they grow from their ration standard. Depending upon the specific situation of each unit, the provincial people's committee will decide whether to gradually deduct the grain they grow from their ration standard or to deduct it all at one time depending upon the quantity of grain harvested.

The management of distribution.

Decision 134/TTg clearly states that the distribution of grain within the sector of which the state is in charge must be tightly managed in order to combat every false census declaration and the inaccurate application of standards for the purpose of receiving more grain than stipulated. In order to fully comply with the spirit of this decision, the management of the distribution of grain must be unified throughout the country as follows:

1) The form of management:

As regards the armed forces, management must be unified throughout the country through the use of ration coupons as is the case now in the North.

--Cadres, manual workers and civil servants of the state and the above mentioned persons who are distributed grain by the state on a permanent basis will continue to use grain purchase books to buy grain to eat where they live, use grain transfer coupons in order to have grain allocated to them when necessary and use "grain allocation introduction papers" for cases in which they are transferred from one place to another.

Persons who have economic contracts with the state and are supplied grain on the basis of the results of the implementation of their two-way economic contracts and persons who are sold grain at business support prices will receive separate guidance because of the many specific, complicated matters involved.

2) Management procedures:

--All agencies, enterprises and schools as well households that are distributed grain by the state must file a grain supply request. The request must clearly state the name, age and occupation of each person within the unit or household.

--Whenever there is a change in the number of persons within the household or unit or a change in a person's occupation that would result in a change in the quantity of grain distributed to them, a report must be filed with the grain agency so that the number of persons and the quantity of grain supplied can be adjusted accordingly.

--Each month, agencies, enterprises, schools, worksites and so forth must report all decreases and increases in the number of personnel and the number of persons shifted from high to low ration standards or vice versa during the month, including the number of persons working overseas for more than 1 month; on this basis, they must make payment for the quantity of grain purchased and used during the month. All surplus grain must be repaid to the state by deducting it from the standard for the following month. The Political Bureau resolution state: "The heads of agencies and units are totally responsible for violations of grain management regulations of the state within their agency or unit."

--Units, agencies, enterprises, worksites, schools and so forth as well as households that falsely state the number of persons they have and their occupations or do not make the necessary adjustments when the number of persons declines, when ration standards are reduced and so forth so that they can purchase more grain than is being distributed to them must return all of the grain in question to the state; depending upon the seriousness of the case, the action taken against them can range from suspending the supply of grain to them for a period of time to permanently suspending their supply of grain and prosecuting them under the law.

The people's committes on the various levels are responsible for organizing regular inspections of the distribution of state grain within the locality and promptly uncovering and harshly dealing with every violation of the grain management policy and regulations of the state, including violations by households and units, agencies, enterprises, worksites and schools of the locality as well as those of the central level located within the locality. Beginning in February 1980, every grain service, especially those that supply large quantities of grain, must assign from 10 to 20 percent of the cadres and personnel to inspecting the distribution of grain.

The organization of implementation.

At a time when many difficulties are being encountered in the daily lives of cadres, manual workers and the people, the implementation of a grain distribution policy such as the one described above will offend many persons. The local people's committees must attach particular importance to political and ideological work, primarily among cadres, manual workers and civil servants of the state. The party organization and mass organizations must insure that everyone has a thorough understanding of the resolution of the Central Committee, realises all the difficulties being encountered by the state with grain. sees the task that they must perform in order to help resolve these difficulties, agrees with the temporary reduction in ration standards, actively participates in production to achieve partial self-sufficiency and does a good job of propagandizing and explaining the policy so that everyone understands it and happily complies with it.

In order to implement the specifics of the policy as set forth above, it is very important to accurately investigate and classify the persons to whom grain is distributed and their standards in order to have a basis for appropriately deducting grain from or reducing their ration standard and correctly implementing distribution in accordance with the new policy in coordination with stopping the distribution of grain to those whose census registration is incorrect, stopping the distribution of grain in cases involving the violation of ration standards, further improving the management of distribution and improving distribution to be consistent with each category of persons to whom grain is distributed.

In order to investigate and classify the persons to whom grain is distributed and their standards, the people's committees of the provinces and municipalities must assign additional cadres to the concerned management sectors, primarily public security and grain cadres, and send them to help the wards, precincts and cities. In the districts, the municipal and provincial people's committees must assign the districts the task of organizing forces to work in accordance with the plan and schedule of the locality.

Compiling statistics and data on each category of persons to whom grain is distributed and their standards for use as the basis for compiling plans for the distribution of grain for the various localities and preparing for the establishment of grain distribution management levels in keeping with the spirit of resolution 09-CP are very necessary. The provincial and municipal people's committees must guide the statistical sector in coordinating with the grain sector to adopt plans and measures for performing this work well, thereby insuring the accuracy of data from the very outset.

The implementation of the new policy involves much that is complex and the situation varies very widely from place to place; therefore, the ministry will amend this policy on the basis of the actual situation.

All previous documents that are contrary to the spirit and content of this circular are hereby cancelled.

'NHAN DAN' ON THRIFT IN ENERGY USE

BK201104 Hanoi Domestic Service in Vietnamese 2300 GMT 18 Nov 81

[NHAN DAN 19 November editorial: "Scientific and Technical Activities to Save Energy and Raw Materials"]

[Text] A fundamental aspect of socialist construction is the rational use and the saving of energy and raw materials. Our country's resources are diversified and abundant, but their exploitation is still in the initial stage and most of the raw materials and fuel we need have to be imported. In recent years, prices for these items have soared, limiting the amount we can import. However, the results of our resources exploitation have been very meager and serious cases of energy and fuel wastage still prevail. Such cases can be noted in all domains of economic and social life.

In the 5-year 1981-1985 period, the requirements of national construction and defense demand that we constantly develop production to stabilize and improve the people's livelihood and consolidate our national defense. We must practice thrift and sternly oppose wastage of energy, fuel and materials in production and consumption.

At the first session of the seventh national assembly, party general secretary Le Duan said: All sectors, echelons and primary installations should strive to overcome difficulties and fulfill by all means the country's requirements using an allocation of technical facilities and materials equal to or less than previous allocations. They must produce more and better assets for society.

The premier's 2 July 1981 directive clearly specified: All sectors and echelons must consider the strict practice of thrift as a national policy. The Political Bureau resolution on scientific and technical policy says: In order to thoroughly understand the economic line and the immediate economic tasks, and to practically contribute to reducing expenses and increasing production results, we should consider the saving of energy, fuel and raw materials in production and consumption as one of the most important struggle objectives when we carry out scientific and technical activities.

In the future, all scientific and technical activities should be concentrated on quickly bringing scientific and technical progress to bear on production with respect to saving energy, fuel and raw materials, especially steel, iron and construction materials. Broadly applying scientific and technical innovations along with strengthening the organization and management of production can help us score new achievements in accelerating production and increasing economic results.

By washing dirt from coal and stratifying mines with iron screen flooring, we can save 15 percent of the timber needed to shore up galleries and extract from 15 to 20 percent more coal. By using compressing coal conveyors to select (Na Duong) coal, we can annually collect many thousand more tons of flaming coal.

The use of well-studied and approved techniques of founding cast iron allows a reduction in the rate of discarded materials from 18-20 percent to approximately 13 percent or less.

Efforts to exploit and use all kinds of domestic resources and sources of fuel and raw materials on the basis of various technical measures and techniques that result in little or no industrial waste constitute a long-term guideline for researching and applying scientific and technical innovations. This is also a struggle guideline for saving technical materials and countering environmental pollution.

At a time when we are still short of facilities, we can always make optimal use of all sources of agricultural and industrial waste. The use of waste from paper mills in producing a paste to be mixed with mortar, cement and concrete has allowed us to economize from 10 to 12 percent on cement. The use of humus in producing biogas will create an additional source of cooking fuel, eliminate a source of disease and increase the use value of fertilizer.

In order to achieve uniformly economical results in all areas of production and consumption, the planning task should be improved on the basis of adequately establishing and constantly improving the system of economic and technical standards and norms. We must promptly and officially establish the state allocation norms for major types of energy, fuel and raw materials. We must achieve very economical results while always ensuring the fulfillment of standards for good quality products.

We should intensify the task of weighing and measuring, correctly implement the system of quality control and institute a clear-cut policy of reward and punishment. The timely publication and correct implementation of various appropriate policies is an essential condition for quickly applying scientific and technical innovations to production and for rationally and economically using all kinds of energy, fuel and raw materials.

Intensifying the tasks of management, capital survey and scientific research, and quickly applying scientific and technical innovations to production constitute the vital guidelines for economizing on energy, fuel and materials.

MOST CONSUMER GOODS ENTERPRISES REFUSE TO SELL GOODS TO STATE

Hanoi LAO DONG in Vietnamese 15 Oct 81 pp 1, 2

[Article by Dinh Hang: "Unacceptable Reasons"]

[Text] A Few Stories

An enterprise which mainly produces spongy sandals for export, employs only a few hundred workers and is located on a deserted street of Haiphong City. As a result, its "name" is known only to a few. Recently, it has become the talk of the town. Sometimes, Sister T, its newly appointed director, was compelled to avoid visitors, and often she has received hand-delivered mail. There are many reasons for the fact that the enterprise suddenly surged into "fame," and its director has been swamped all day long with visitors. The enterprise has flourished, its workers' income has increased, and its workers have actively taken part in emulation drives, etc. But, there is an important cause--a rather attractive one for everybody--bicycle tires, a new product of the factory, a Plan B commodity being sold at agreed upon prices and used in two- or three-way barter with various customers.

At the Viet Tri monosodium glutamate factory, the fulfillment rate of Plan B for Maggi production for the first 6 months of 1981 was not high; however, Maggi production on Plan B has achieved a very high fulfillment rate. Since that product belongs to Plan B, the factory has delivered only limited quantities and at high prices to state commerce, while keeping the rest at its own disposal.

When shopping, big city consumers think almost instantaneously about state stores. But after arriving there, they often find out that what they need is not in stock, or is just sold out. Nevertheless, "curb" markets carry all kinds of goods and have them handy for delivery--including privately produced goods, and also quite a few goods under state monopoly. Rather than get to state-operated stores, these goods go straight to the "curbs."

At the beginning of the year, the soap factory must provide customers with 5 tons of laundry soap for "diplomatic" purposes, and directly sent 20 tons to the commercial bureau of Dong Da Precinct (where the factory is located). Obviously, these 25 tons of soap did not belong to the management and purchase "orbit" of home trade organs.

Similar stories on production and consumption of products abound at state-operated production installations. However, the above few stories are enough for us to explain that products made by consumer goods enterprises are not delivered in full (minus the percentage which the state allows them to keep) to state commerce, so that it can draw up plans for direct distribution to consumers. Instead, some of these products are diverted to unauthorized outlets.

Reasons Advanced by Producers

In a report to a conference, the director of the Hanoi Professional Tools Factory said, "According to plan, the state promised to supply the factory with 60 tons of aluminum, 60 tons of acetylene, 600 tons of coal, etc. But, in fact, it supplied only 10 tons of aluminum, 10 tons of acetylene and 20 tons of coal. As for electricity, it has been cut at will. The factory has two generators, 137 and 78 KVA, but no oil was provided."

Despite all these insufficient supplies and electric cuts, the factory continues to "live" and produce. The director is really resourceful! I then thought. And as the director left the rostrum, I asked him in a low voice:

"How could you keep the factory alive?"

"Get cracking!"

"But how?"

"Well, go to places which have what we need. Go there with our friendship. and sometimes with our products as well."

He went on with a crafty smile, "If 'they' give us acetylene, aluminum, we must return the favor with what we possess."

"For instance?"

"Bicycle spare parts, if you want."

"Given such generous 'diplomacy,' where could the factory find products for delivery to the state?"

"No worry. Everything will be all right. In similar situations, if we don't lean on each other for support, we will not be able to survive... But these things belonged to 1980. As for this year, I must wait until it ends before making a comment."

His stories are the ones of 1980; but in 1981 most enterprises still are undersupplied with production materials. Their directors must go here and there, to the south and to the north, up to the mountains and down to the coast, buying bit by bit all that their factories need in order to maintain production and jobs for workers. Raw and building materials shortages have led to increasingly arbitrary prices. In 1980, the price of a kg of coconut oil was 18.6 dong, in July 1981 it shot up to 36.7 dong, and the soap factory must pay cash to get it. When the factory could not buy coconut oil, it must exchange soap and tooth paste for needed raw and building materials, such as fat, saccharin, etc.

Nearly all the producers I met have strived to justify [their actions] as follows: Because allocations of supplies are very few, factories must take it upon themselves to acquire them, and because they have taken it upon themselves to acquire supplies and accept high prices, they can perfectly claim the right to use part of their own products to "pave the way" toward places having these needed materials.

A Comment

The year 1981 will end in just more than 2 months. But, according to leading cadres at the General Merchandise Corporation (Ministry of Home Trade), a large number of consumer goods production enterprises have delivered only a very small volume of contract goods to state commerce. According to contracts, porcelain and pottery factories must deliver to state commerce 60 million products in 1981; but in the first 6 months of the year, they have delivered only 10 million products. State commerce has bought very little from 120 bowl-making kilns in Song Be Province. Aluminum enamelware factories have nearly fulfilled the delivery norms in terms of quantity, however, these deliveries included for the most part small cooking pots for 1 to 3 persons, and soup spoons, and an insignificant number of big items, such as medium and large pots, trays and vessels. Instead of delivering 500,000 pairs of sandals to state commerce as planned, plastic factories such as the Tien Phong have come up with only 47,000 pairs in the first 6 months of 1981, and no longer are able to send out more. Like the Tien Phong, the Hanoi and Hai Hung plastic factories are in a same situation.

We are not going to accept these reasons advanced by "producers" as a valid explanation for the above situation. There is, indeed, the question of shortages and uneven distribution of materials, equipment and energy, but whether these materials and equipment are state-allocated or self-supplied, it is imperative that production installations concentrate their products into the hands of the state, so that it can draw up regulatory plans for direct distribution to consumers. And this is the only way to sustain the principles of socialist economic management and avoid misdoings which can wreck both the management system and man.

REFUSAL TO DELIVER PRODUCTS TO STATE CRITICIZED

Hanoi LAO DONG in Vietnamese 15 Oct 81 p 1

[Editorial: "Deliver Products to the State"]

[Text] It is a fact that our consumer goods are in short supply. But, to say that these shortages are caused by shortages of raw and building materials, coal, electricity and spare parts, is true only in part. The other more important part is that consumer goods production installations are unwilling to deliver all their products to the state, using instead part of these to solve the needs of their own units, such as two-way barter, rewards for workers, exchange with other friendly units for raw and building materials, etc.

This phenomenon is fairly widespread in all production installations, and is usually explained as follows: these are products made in accordance with Plan B and with raw materials, which the enterprises create, acquire by themselves, or purchase at high prices; hence, they should have the right to consume them and set prices on them. But the issue is that while commodities are identical, prices are different, and that main products are cheaper than secondary ones. Plan A is not fulfilled and there are not enough products for delivery to the state; on the contrary, Plan B is overfulfilled, but just a small quantity of products is delivered to state commerce.

While production installations violate contracts on delivery of products to the state, the commercial sector is unwilling to acquire commodities right at their source. In goods purchase, it lacks concrete and active measures to create conditions for inciting installations to develop production, turn out more goods, better goods and more varieties of goods, thus making consumer goods more diversified and more plentiful.

Delivering all products to the state is a principle in economic management and an obligation for production enterprises. Whether their products come from state-supplied raw materials or from self-supplied ones, enterprises are allowed by the state to keep only some of these commodities for their own legitimate needs, and are bound to concentrate the remainder--whether they are main products or secondary ones, and whether they are sold at stable prices or at agreed upon ones--into the hands of the state, so that plans for balanced distribution to meet the common needs of the entire nation can be implemented.

The commercial sector, first of all corporations dealing in consumer goods, should take many active measures to secure sources of goods, and should--along with production installations--set rational unit prices, especially for commodities to be sold at agreed upon prices. The commercial sector can also act as a middle man in the exchange of raw and building materials between branches and enterprises, and can help production installations create and search for sources of goods.

This is the only way to concentrate goods into the hands of the state, to avoid flaws in production and circulation, and to contribute to promoting consumer goods production, so as to improve the living conditions of workers, civil servants and the people.

ECONOMIC PLANNING, TRADE AND FINANCE

HIGH GAS CONSUMPTION BLAMED ON INEFFICIENT OPERATIONS

Hanoi NHAN DAN in Vietnamese 24 Sep 81 p 2

/Article by Hong Khanh: "The Possibilities for Reducing Gasoline and Oil Consumption"/

/Text/ At many enterprises and worksites there is concern over the very high gasoline and oil consumption figures. In addition to the fact that installations are exceeding their gasoline and oil consumption ceilings and allowing these products to be stolen, be wasted and evaporate, there are also cases of disorganization in the supply of gasoline and oil that sometimes cause the loss of hundreds of tons of gasoline and oil.

A Waste of Transportation

Of the total quantity of cargo transported by highway, coal, wood, stone, sand, gravel, lime and ore constitute more than two-thirds. However, practically all of the above mentioned products that arrive at enterprises and worksites are not of the correct quality, specification or type. Stone, sand and gravel contain more than 15 percent impurities. More than a small percentage of lumber is rotten, poor quality lumber. At some places, the quantity of "da sit" and overburden in coal and ore exceeds 30 percent. During the first 6 months of this year, the impurities, dirt and overburden in the total quantity of the above mentioned products transported to domestic markets amounted to nearly 1 million tons. These "uninvited guests" not only take up much of the capacity of railroad cars, trucks and storage yards, but also result in the consumption of a significant amount of gasoline (ordinarily, gasoline constitutes 40 percent of truck transportation costs). But, this is not all. Once these products are received, production installations must remove the impurities from them and then find ways to obtain additional raw materials, fuel or supplies to compensate for this loss. Once again, they consume gasoline by hiring additional means of transportation. For example, during the first 7 months of this year, the Federation of Cement Enterprises received more than 80,000 tons of Hon Gai coal and Na Duong coal (which amounted to only slightly more than one-third of its consumption ceiling for the entire year); of this amount, nearly 30 percent and, at one time, 40 percent of the coal was poor quality coal and impurities. As a result, the consumption of coal per ton of clinker rose from 390 to 425 kilograms. The Federation of Cement Enterprises had to spend thousands of additional dong to purchase gasoline and rent means of transportation to transport nearly 5 tons of coal in excess of its consumption ceiling.

If the mines and even the trans-shipment wharves and yards sorted and washed their product well and removed the overburden and impurities so that each kilogram of coal and cubic meter of stone arriving at markets was 100 percent coal or stone, would it have been necessary to waste hundreds of tons of gasoline? This potential saving is very large and is a savings that we are fully capable of realizing.

Making Both Ends Meet

In more than a few cases, because supplies have not been promptly provided, the workers of many enterprises and worksites have had to stop working. More than a few of these difficult cases have been the result of bureaucracy or bothersome red tape or the result of a supply-transportation unit pursuing a "secondary" business. In order to maintain production, enterprises and worksites must find ways to "make both ends meet" by taking something from one area and giving it to another or by borrowing supplies from other units. This has led to unnecessary transportation, unnecessary transportation that has involved a large quantity of gasoline and means of transportation. For example, at the start of this year, in keeping with its construction rate plan, the worksite enlarging the Lam Thao Superphosphate Plant needed 1,700 tons of cement for foundations, pillars, storehouses and machine bases. While the construction work was being carried out, the supply of cement stopped. When the place supplying the cement was asked about this, the persons at the construction site were told to wait! Faced with the threat of thousands of persons stopping work, the leaders of the worksite decided to borrow cement that was temporarily not being used from other units in the area. They borrowed 800 tons of cement from five units that were 30 to 50 kilometers away from Lam Thao and one place that was nearly 200 kilometers away in the direction of Hoang Lien Son; the worksite had to hire dozens of barges and trucks to transport this cement. If supplied under the contract between the worksite, stevedore, transportation and supply units, these 800 tons of cement would have only had to be transported from Haiphong to Lam Thao, a distance of slightly more than 200 kilometers. However, as a result of transporting it over so many short routes, nearly 5 additional tons of gasoline were consumed. This is not to mention the fact that the worksite had to transport and equal amount of cement to repay these units.

As many enterprise and worksite directors have stated: "It is possible to overcome such problems if the concerned parties work with the highest possible spirit of responsibility and respect and correctly implement contracts; under state regulations, contracts possess full legal value. This also provides a large possibility for saving gasoline."

Sometimes Products Are Thrown Away

Our country imports a large quantity of lubricating oil each year. The price of lubricating oil on the world market is two or three times higher than the price of gasoline. The experience of many developed industrial countries shows that nearly one-half the total quantity of lubricating oil used each year for machinery and equipment is reclaimed from discarded lubricating oil.

In 1979, six installations under the Gasoline General Corporation (the Ministry of Supply) reclaimed 1,500 tons of lubricating oil from discarded oil; in 1980, they reclaimed more than 1,000 tons. During the first 6 months of this year, they reclaimed 410 tons. Compared to the recycling capacity of these six installations, the results achieved so far have been very low. This is primarily due to the inability to purchase discarded lubricating oil. There are many sources of this oil at truck, boat and transport enterprises as well as industrial complexes. Every time periodic maintenance is performed on vehicles and machines, lubricating oil is removed from internal combustion engines, transformers, turbines and so forth and discarded. The requirement of reclaiming 25 percent of the lubricating oil used is based on the needs of each year's plan (the fraternal countries reclaim 30 to 50 percent). However, we are only reclaiming 5 to 7 percent each year. During the first 6 months of this year, the amount of lubricating oil reclaimed only equalled slightly more than one-third the amount required under the plan for the year.

Because they lack a sense of frugality, the installations that have sources of discarded lubricating oil have not adopted measures for thoroughly organizing its reclamation. Reclaiming oil has not become a law and both the places that reclaim discarded lubricating oil as well as those that do not, receive equal amounts of new lubricating oil. Another important factor is that the price of reclaimed lubricating oil is very low. At present, 1 kilogram of reclaimed lubricating oil only costs 3 hao (0.30 dong). Meanwhile, the prices of 1 kilogram of kerosene, diesel fuel and oil used to coat the forms used to make bricks and tiles are many times higher. As a result, many units have silently allowed their discarded lubricating oil to be sent to brick and tile kilns, where it is used to coat wooden brick and tile forms, is sprayed into kilns to make them hotter at a time when they must use poor quality coal, is used to replace diesel fuel, etc.

In view of the fact that we import hundreds of thousands of tons of lubricating oil each year, if we reclaim the required percentage of discarded lubricating oil and recycle it for use, we would save tens of thousands of tons.

BRIEFS

RESETTLERS FROM HA NAM NINH--Over the past 5 years Ha Nam Ninh Province has sent 10,535 families comprising 85,749 people to build new economic zones in three northern mountain provinces and three southern provinces--Minh Hai, Lam Dong and Gia Lai-cong Tum--as well as in a number of districts in its mountainous and coastal regions. During the same period, these resettlers have opened up 66,210 hectares of virgin land, built 250 km of roads and set up 49 medical aid stations. In the years ahead, Ha Nam Ninh will strive to resettle 20,000-50,000 people annually in various new economic zones in other provinces. [Hanoi NHAN DAN in Vietnamese 11 Nov 81 p 3 BK]

SOME 1981 ACHIEVEMENTS IN THE MEKONG DELTA REVIEWED

Hanoi NHAN DAN in Vietnamese 28 Oct 81 p 2

[Article by Huu Tho: "Some Achievements in the Mekong Delta in 1981"]

[Excerpt] Awareness and Management Mechanism

The economic development of the Mekong delta is closely linked with carrying on at the same time three revolutions, of which the scientific and technical revolution is the key one. Many comrades, whether they are researchers or practical leaders, have one common observation: in the absence of science and technology it is impossible to exploit on a large scale and with good results this rich economic region. But in order to wipe out the many forms of exploitation in rural areas and to pave the way for introducing technical progress to production, the socialist transformation in agriculture is a subject many people are interested in.

In recent years, there were definite results in the socialist transformation in agriculture, but in our opinion the difficulties encountered were far from minor. And now, after a period of fast development and screenings, the remaining production collectives have undergone initial consolidation. In the Nam Bo provinces there currently are 176 cooperatives, 3,737 production collectives and more than 30,000 transitional organizations like production solidarity teams, work rotation and exchange teams, small tractor work cooperation teams, water pipe and pump teams, seed production teams, etc. Some production collectives have been doing quite well, with production continuing to grow. But in general, as the VCP Central Committee secretariat has concluded, the socialist transformation in the Nam Bo provinces has progressed slowly. So far only 7 percent of the land and 9 percent of the farmers there have joined the production collectives. Proper importance has not yet been attached to the transitional forms, which so far have attracted only about 30 percent of farmers' families and involved about 25 percent of the cultivated area. The secretary of the Hau Giang Provincial VCP Committee has expressed this regret: "After we succeeded in building the Go Cong production solidarity team model. we have abandoned it by failing to pursue further expansion." The credit cooperatives and marketing cooperatives, which are the forms of cooperation among farmers to assist one another in selling and buying, borrowing and preventing exploitation by private business people and lenders, have not been developed; in the localities where they were successful, they have primarily aimed at doing business and making profit only. In the Nam Bo rural areas, according to an initial investigation in a number of hamlets, there still are about 3 percent of households taking part in capitalist-style exploitation, about 10-20 percent of households having little or no land to till and 2 percent of households having nothing to do with agricultural production. Middle farmers, the central character in the Mekong delta countryside, account for 70 percent of families and 75 percent of laborers having many means of production (80 percent of land, 60 percent of mechanical energy, 70 percent of small machinery and 93 percent of draft power) and produce 80 percent of agricultural products, with 77 percent of the latter being farm commodities. They are people who have production experience, technical knowledge and high labor productivity in production and are eager to acquire technical improvement but also are easily attracted to the law of market value. The socialist transformation is the central task in the Mekong delta countryside. What determines its success in the agriculture there is a correct attitude, appropriate forms and an ability to attract large numbers of middle farmers into the movement to establish cooperatives.

The reason why the pace of the socialist transformation in the Nam Bo provinces has been slow is a matter that has led to many opinions. We have attended many conferences on the socialist transformation in Nam Bo's agriculture. But the conclusion of the VCP Central Committee secretariat on this reason this time generates a high degree of unanimity. In the past we only emphasized awareness as the reason. This time, beside awareness we have pointed out as a reason the selection of forms, steps, mechanism of management and appropriate organization; beside the ideological reason we have pointed out the organizational reason, both being equally important reasons.

A vague awareness of the socialist revolution has led to hesitancy, lack of urgency and passiveness, as well as impatience, constraint, wrong doing and the need to go the long way. Both tendencies have resulted in slow work. Some cadres and party members who have not acquired a keen understanding of the socialist revolution, the struggle between the two roads, labor and exploitation have consequently failed to be exemplary, nor have they had the determination to carry out the socialist transformation in agriculture.

But there is another reason as the secretariat has pointed out this time: practical organization. The fact that we have been slow in developing the appropriate forms and steps to reflect the party line and policies being true to the agricultural characteristics and the psychology and aspirations of Nam Bo farmers and have failed to attach importance to the low form, with attention being paid only to the high form instead, has been the reason we did not attract very many farmers, mostly the middle farmers, into the forms of agricultural cooperation, the movement to establish cooperatives. Since March there has been a greater change in the awareness in connection with a greater interest in organizing transitional forms and at the same time making active and steady preparations for moving to a higher form.

In the effort to achieve the socialist transformation in agriculture in the south, many comrades believe that the fact that we have been slow in adopting the state policies on taxes, investment, loans, etc. aimed at helping the socialist collective economic organizations to develop their superiority over individual production has been a shortcoming that must be quickly overcome.

AGRICULTURE

MEKONG DELTA PROVINCES BUILD ADDITIONAL STATE FARMS

Hanoi NHAN DAN in Vietnamese 28 Oct 81 p 1

[Article: "Mekong Delta State Farms Grow Over 30,000 Hectares of Tenth-Month Rice -- Dac Lac Receives Laborers for Construction of New Economic Zones Equal One-Third of Province's Population"]

[Text] Six Mekong delta provinces (except Ben Tre, Tien Giang and Cuu Long) have built 54 rice-producing state farms, with 10 of them being under central management.

These state farms have been combining both capital construction and production. They were able to open 31,223 hectares of new land, but since they were built on alkaline soil, the area that was put into production accounted for only 50-60 percent, with the work having to be redone several times in some of them and intensive cultivation being practiced on a limited scale.

In the 1981 tenth-month rice season, many rice-growing areas have been affected by drought. Of the 40,500 hectares of rice crop in 39 state farms nearly 10,000 hectares have been drought-stricken. The state farms have sown 2,000 additional hectares so as to have about 32,800 hectares of rice crop to be harvested. According to estimates, if the rice crop yield were about the same as that obtained in the 1980 tenth-month season, they could harvest about 27,400 tons of paddy.

In 5 years (1976-1980) Dac Lac Province accepted 127,597 persons, including 64,678 laborers, from Quang Nam-Da Nang, Thai Binh, Binh Tri Thien, Nghe Tinh and Nghia Binh Provinces -- a figure equal to one-third of the population of the entire province -- who came to help to build new economic zones. The new economic zone southwest of Krong Pach District, which is the largest one with nearly 40,000 people, has established 6 new villages and 2 villages being incorporated with the local ones.

In the last 5 years, the new economic zones in Dac Lac opened 31,069 hectares of new land. In the new economic zones, 12 irrigation projects, over 200 kilometers of ditches, 1,000 kilometers of main-axis roads and 95 bridges of all kinds were built anew or repaired.

With the motto of the state and the people working jointly, the new economic zone population organized their own production of building materials right in their localities and fully used timber, straw, bamboo, slender bamboo and palm leaves to build 17 village and zone public health stations, 13 cooperative stores, 52 basic-level general schools, 85 kindergarten classes, 165 child-care centers, 6 cultural and information centers, 31 grain storehouses, 20 drying yards and 25,500 dwellings.

In spite of the initial difficulties, the people in the Dac Lac new economic zones have stabilized their living conditions and become attached to their new land.

YOUTHS MOBILIZED TO DEVELOP AGRICULTURE IN MEKONG DELTA

Vice Minister Comments

Hanoi THANH NIEN in Vietnamese No 8, Aug 81 pp 1-3, 13

[Article by Nguyen Dang, Vice Minister of Agriculture]

[Excerpts] In accordance with Resolution 148/CP of the Council of Ministers, during the next few years the Mekong Delta will endeavor to attain levels of about 9.5 million tons of grain, including 9 million tons of rice, 200,000 tons of soybeans, 140,000 tons of jute, and about 180,000 tons of manually produced sugar, and increase the number of hogs to about 4 to 5 million and the number of ducks to 25 to 30 million.

When those objectives are met, the rice, soybeans, and jute produced by the Mekong Delta provinces will account for 65, 60, and 80 percent, respectively, of the national output of those products. Thus there will be created an important source of agricultural commodities for domestic consumption and for export.

Land and labor are two principal factors of agricultural production. The requirements of labor for practicing intensive cultivation, increasing the number of growing seasons, expanding cultivation and stock raising, and building water conservancy projects are very great. We must fully utilize the existing on-the-spot labor, distribute some labor among the various areas in the region, endeavor to enable all workers to attain the level of 200 work days a year, use some army personnel to help build water conservancy, road, industrial, and other civilian projects, and add labor from other places, above all from the cities -- especially Ho Chi Minh City -- and the northern provinces. We must endeavor to, by 1985, complete cooperativization, with the principal form being the production collective. We must pay special attention to building state farms, give them priority in the investment of capital, materials, agricultural machinery, and cadres, and closely guide them so that they can attain high economic effectiveness and play an exemplary economic-technical role throughout the region.

On the basis of its guidance experiences and the immediate requirements, recently the Central Committee of the Ho Chi Minh Communist Youth Union and the Ministry of Agriculture agreed to launch a movement to "mobilize youths of the entire nation to participate in building and developing agriculture in the Mekong Delta in order to enrich the homeland.

The Youth Union will concentrate on mobilizing youths to participate in providing political support for the creation of rice state farms in the northern Ha Tien area of Kien Giang Province, and regard that as a "communist youth project."

The movement was launched at a solemn conference organized jointly by the Youth Union Central Committee and the Ministry of Agriculture in An Giang Province in mid-May of this year.

Joint Resolution Issued

Hanoi THANH NIEN in Vietnamese No 8, Aug 81 pp 4, 5

[Article by "P.V."]

[Excerpts] In March 1981 the Central Committee Secretariat of the Youth Union and the Minister of Agriculture issued a joint resolution regarding the mobilization of youths throughout the nation to participate in building and developing agriculture in the Mekong Delta. The Ho Chi Minh Communist Youth Union has decided to sponsor the northern Ha Tien rice area in Kien Giang Province. That is a "communist youth project" which has been included in the third five-year plan (1981-1985). It is a major project in the nation's No 1 food-growing area. That area will be a lively, rich, attractive challenge for the nation's youths.

In order to carry out that joint resolution, a "Youths Volunteer to Build and Develop Agriculture in the Mekong Delta" conference was held in An Giang Province from 13 to 16 May 1981. At the conference, a contract was signed between the Youth Union chapters in Hai Hung, Thai Binh, Ha Nam Ninh, Thanh Hoa, Nghe Tinh, Vinh Phu, and other provinces and nine state farms in Ha Tien which provided for mutual assistance in developing agricultural production. The Youth Union chapter of Ho Chi Minh City has agreed to sponsor youth state farms in that area.

Improving Youths' Living Conditions

Hanoi THANH NIEN in Vietnamese No 8, Aug 81 pp 6, 7

[Article by Le Hong Phan]

[Excerpts] The Council of Ministers resolution regarding the development of agricultural production in the Mekong Delta points out that the direction and objective of agricultural production is emphasizing all three aspects -- intensive cultivation, increasing the number of growing seasons, and clearing wasteland -- and regards the clearing of wasteland as a vital mission. But that will remain only a capability if economic matters are not closely tied in with social construction and organization, and if political mobilization and the organization of mass forces are not tied in with the positive drafting and supplementation of regulations and policies, in order to cultivate and strongly encourage the creative labor capabilities of the masses.

Why are people who go to clear wasteland and develop new economic zones -- most of whom are Youth Union members and other youths -- not content to remain there and develop the new economic zones, but want to return home? What can be done to get youths to remain in the state farms and agricultural cooperatives in the new zones? Those are questions which have been posed in the course of the actual work, and must be answered promptly and accurately.

When studying those problems, many specialized leadership cadres believe that the reason why many youths return home is that the propaganda and ideological mobilization tasks have not been adequately carried out, that must is said about the favorable aspects but the masses have not been fully informed about the difficulties and complications in the new zones, so they are surprised when they encounter difficulties in their lives and activities. Some believe that the reason is the low quality of Youth Union members resulting from large-scale recruitment by the Youth Union echelons. Some places have declared that the youths would go for only a 3-year period. At the end of that time, conditions in the state farms are still difficult and their lives there are not sufficiently appealing, so they return home, etc. Those reasons are valid, but we believe that they are not the most important ones, for a considerable number of places annually receive hundreds of additional workers, most of them Youth Union members and other youths, who come to settle in the new economic zones. The director of the Binh Son State Farm No 2 in Kien Giang said that "If we had enough houses there would always be hundreds of families in Thai Binh and the other provinces requesting permission to come here to become state farm workers." Thus it is clear that the situation of workers lacking stability and not remaining in the new zones results above all from failure to closely combine the economic construction mission with social organization and the development of living conditions.

Having studied the northern state farms over the past 10 or 15 years and in state farms set up during the past few years in the Mekong Delta, we agree with the opinion that a matter of foremost concern in the development of new economic zones is the organization of a new society in the new areas. We must clearly understand the organic relationship between economic construction and social organization, in order to make suitable investment from the very beginning in the formation of a new society.

Although the factors necessary for the initial stabilization of living conditions differ in the economic units (state farms), we believe that concern must be shown for the following.

1. There must be correct production directions from the very beginning, in order to have struggle goals and on that basis help the state farms quickly stabilize production. By that means we must help the workers improve their vocational skills and labor capability, and create conditions for increasing the workers' incomes. That demands that we do a truly good job of basic studies in order to firmly grasp the natural conditions and land conditions, and the other relationships which affect production, and prepare the production plans and initial material-technical bases truly well, so that when the workers arrive at the state forms they can begin to produce immediately. At the Binh Son No 3 state farm, after 3 years the average salary of a cultivation worker was 200 worker; that of a machinery worker was 270 dong; and that of a day-care center worker was 93 dong. After only a year, at the Vinh Dieu A state farm the average income of a worker was double the basic salary level. Monetary income increased and material living conditions were improved. That is one of the factors which cause workers to be enthusiastic and content.

2. The workers and their families must be provided with housing and the minimum living conveniences; there must be water for home consumption and electricity (or sufficient oil for lamps), and facilities for amusement and relaxation after a day of hard work. That is an important factor in causing the workers, especially youths, to "stay on" and work enthusiastically in the new areas.

Major difficulties in the Mekong Delta area are a lack of materials to build houses and a shortage of fresh water. In order to resolve those difficulties, the My Lam, 85D, Binh Son 3, and other state farms produced bricks with which to build houses and water cisterms. Nearly all of the state farms have dug wells, have at least one fresh-water well, have dug additional ponds to retain fresh water, and have purchased electric generators in order to have lighting 3 or 4 hours a day an operate radios and television sets. They have purchased musical instruments, built reading rooms and clubs, etc., thus creating a way of life which, although not yet adequate, is healthy and wholesome. Youths no longer that they are serving temporarily, so they become more enthusiastic in their production and positively build a collective way of life. The Binh Son 2 and Vinh Dien A state farms recruit additional workers only when they have sufficient housing, beds, and mats, so people who come to those state farms have stable living conditions from the very beginning.

3. We must provide education for the workers' children and provide medicine and medical care for them when they are ill. When workers go to new areas, questions that must be resolved after housing is provided is where the children will study and whether there is medicine and medical facilities when they are ill. When one visits the Binh Son 2, Binh Son 3, My Lam, and other state farms one notices above all that the largest, most attractive, coolest buildings are used as day-care centers and clinics. Only 3 years after it was set up the Binh Son 3 state farm has an elementary general school. Many state farms still lack technicians and technical cadres but all have sufficient teachers, have medical aides and nurses, and have sufficient amounts of medicine to treat ordinary diseases.

4. We must assure that workers can travel and take annual vacations. That is a difficult problem, especially in the distant, remote state farms. The My Lam, Ha Tien, and Vinh Dien A state farms have gone all-out to buy motorboats and ferries to transport workers. The Binh Son 3 state farm has buses and has organized the transportation going on vacation. The leadership cadres of the Vinh Dien A state farm, the youth state farm, etc., are thinking, calculating, and campaigning for additional youths' families to enter the state farm. It takes age and sex into consideration when recruiting in order to create conditions for them to start families and reduce the need for annual vacations. That is a direction for long-range, solid stabilization. At the Binh Son 2 state farm, during the past 3 years there have been nearly 40 marriages, and at the Vinh Dau state farms within the first year there were four marriages.

5. Workers must be provided land so that they can produce to improve their living conditions. All workers are issued land so that they can produce in the secondary economy. The amount of land is determined by the state farm. But it is compulsory that that land be used to grow crops in accordance with a unified plan. The families may grow vegetables, but the collectives must grow fruit trees. Thus after only a few years, in addition to increasing the workers' incomes the state farms will be more attractive because of those orchards.

Those only factors which only assure the minimum living conditions of the workers, and which are limited to state farms. From a wider point of view, in an area with many state farms, such as the Mekong Delta, or in the "communist youth project" in the Ha Tien rice area, area planning in order to rapidly build a system of roads, a system of canals and ditches, a postal and broadcasting network, a cultural-educational center, a public service project, etc., with the participation and aid of many sectors, will be one of the important factors which, in addition to the new regulations and policies, will serve to strongly stimulate the creative labor capabilities of the workers, especially youths. Only then can we truly create a new society in the new areas.

AGRICULTURE

TEN-DAY AGRICULTURAL REVIEW

BK020323 Hanoi Domestic Service in Vietnamese 0400 GMT 1 Dec 81

[Review of agricultural news for the past 10 days]

[Summary] "Over the past 10 days provinces throughout the countries concentrated their efforts on harvesting the 10th-month rice and planting the winter-spring rice, thanks to favorable weather conditions. The northern provinces and cities harvested an additional 370,000 hectares of 10th-month rice. They have to date basically completed the harvest work."

The pace of the harvest is relatively quicker than the previous year and the average 10th-month rice yield is higher than expected. Many districts and cooperatives in Haiphong Municipality have collected more than 30 quintals per hectare; Thai Binh Province, more than 29 quintals, while Thanh Hoa, Nghe Tinh and Ha Bac provinces have collected from more than 15 to 20 quintals per hectare.

"Southern provinces and cities have harvested more than 160,000 hectares of 10th-month rice or more than 8 percent of the cultivated area. According to preliminary reports by provinces from Thuan Hai southward, the average yield of 10th-month rice is more than 21 quintals per hectare. Ho Chi Minh City has collected a yield of 26 quintals per hectare; Minh Hai, 24 quintals; Hau Giang and Ben Tre, 22 quintals; Cuu Long, 23 quintals and so forth." These provinces are currently caring for the late 10th-month rice crop while accelerating the harvest work to prepare land for the winter-spring crops.

Concerning the winter-spring subsidiary crop, localities have to date planted 40,000 hectares of potatoes, or 50 percent of the plan norm, and are striving to fulfill their target by the end of this year. Southern provinces have planted 2.8 hectares [as heard] of winter-spring vegetable and subsidiary crops. Northern provinces and cities to date have sown more than 40,000 hectares of 5th-month spring seedlings and plowed more than 30,000 hectares of ricefields for the 5th-month spring crop, about 10,000 hectares more than the same period last year.

Noteworthy is the shortage of fertilizer. The quantity of organic fertilizer on reserve is smaller than the previous year. Duckweeds are planted on 20,000 hectares compared to 130,000 hectares during the same period last year. Localities must, therefore, strive to increase areas for duckweed growth to help increase the source of fertilizer.

"Southern provinces and cities to date have planted more than 90,000 hectares of winter-spring rice. Provinces taking the lead are Tien Giang, Long An, Hau Giang and Dong Thap. Harmful insects are appearing on newly planted winter-spring ricefields, therefore localities must take measures to eliminate and control the insects satisfactorily during their nascent stage to avoid possible heavy damages which were experienced by the southern provinces in previous years and by the northern provinces with the last 10th-month crop."

The meteorological and hydrological general department has announced that there will be many cold days next week with a temperature below 15 degree Celcius. Localities must, therefore, carry out the following tasks satisfactorily:

Northern provinces must accelerate the planting of the winter subsidiary crops, especially potatoes; give special attention to caring for the planted crops during the cold spell and prepare sufficient seeds for the spring crops. They must quickly sow the 5th-month seedlings and take measures to prevent draft cattle from overworking, especially during the cold days, and promptly eliminate epidemics when they occur.

Southern provinces must promptly harvest the ripe 10th-month rice and plant the winter-spring rice, vegetable and subsidiary crops according to schedule. They must also promptly control and eliminate harmful insects on late 10th-month and early winter-spring ricefields and strive to limit the expansion of these insects in the 1981-1982 winter-spring crop.

CSO: 4209/117

BRIEFS

RICE FARM CONFERENCE--The Ministry of Agriculture recently held a conference in Ho Chi Minh City to review the task of establishing state rice farms in the Mekong River Delta during 1976-1980 and to set forth guidelines and tasks for these farms in the years ahead. Over the past 5 years, the agricultural sector has established 53 state rice farms in provinces of the Mekong River Delta, mostly in areas of fallow, saline and waterlogging land. Of these state farms, 10 have been managed directly by the Ministry of Agriculture, 27 have been managed by localities and 16 by the army. The total natural land area of these farms is 200,000 ha with a potential rice-growing area of 150,000 ha. During 1976-1979 these state farms reclaimed and planted rice on 16,000 ha and were able to ensure their self-sufficiency in grain. They also delivered to state granaries 16,000 tons of rice. In 1980, the rice acreage in these farms increased to more than 32,500 ha. They produced 20,000 tons of rice and delivered to state granaries almost 10,000 tons. [Text] [BK010651 Hanoi Domestic Service in Vietnamese 2300 GMT 30 Nov 81]

THANH HOA RICE HARVEST--Thanh Hoa Province has completed harvesting its 10th-month rice with an average yield of 2.03 tons per hectare, overfulling the planned output of paddy by more than 43,000 tons. Thanks to effective countermeasures, the province has earlier saved 59,600 hectares of this rice from being destroyed by harmful insects and blight. [Hanoi Domestic Service in Vietnamese 0400 GMT 30 Nov 81 BK]

LONG AN 10TH-MONTH RICE--Long An Province has planted more than 112,500 hectares of rice in this 10th-month crop season. This figure represents nearly 96 percent of the planned acreage and shows an increase of some 20,000 hectares over last year. The province has also planted winter-spring rice on 20,000 hectares or 70 percent of the slated area. [Hanoi Domestic Service in Vietnamese 2300 GMT 1 Dec 81 BK]

TIEN GIANG WINTER-SPRING RICE--By 26 November, Tien Giang Province had planted winter-spring rice on nearly 33,000 hectares. This figure represents 44 percent of the planned acreage. Go Cong Tay and Go Cong Dong districts and My Tho City have almost completed the cultivation of this rice. [Hanoi Domestic Service in Vietnamese 1430 GMT 2 Dec 81 BK]

CUU LONG GRAIN COLLECTION--As of 15 November, Cuu Long Province had overfulfilled its grain collection norm for 1981 by 8 percent. In addition to the effort to collect 20,000 tons of grain in excess of the planned target, Cuu Long is intensively making preparations for the collection of grain produced in this 10th-month crop season. [Hanoi Domestic Service in Vietnamese 1430 GMT 28 Nov 81 BK]

BEN TRE WINTER-SPRING RICE--Thanks to prompt action, thousands of hectares of rice in several districts of Ben Tre Province have been saved from being ravaged by insects and blight. However, due to insufficient supply of necessary materials by various sectors concerned, Ben Tre has been able to plant winter-spring rice on only 15,000 hectares or nearly 50 percent of the planned area despite the fact that the cultivation schedule is almost over. [Hanoi Domestic Service in Vietnamese 2300 GMT 1 Dec 81 BK]

WAYS SUGGESTED TO BETTER HANDICRAFT GOODS FOR EXPORTS

Hanoi NHAN DAN in Vietnamese 27 Oct 81 p 1

[Editorial: "Handicraft Goods for Export"]

[Text] Of the goods we currently export the various kinds of goods made by our small industry and handicrafts account for a considerable part. In the last 5-year (1976-1980) alone, the value of small industrial and handicraft goods accounted for about 20 percent of the total export value; in the last few years, that percentage tended to increase.

The export handicraft products consist of thousands of items that fall into a few major kinds: fine art handicraft goods, consumer goods and handheld tools. These kinds of goods, particularly the fine art handicraft goods, are well-liked in the world market because of their unique national features on the one hand, and because they are made of tropical raw materials on the other.

The production of handicraft goods for export not only is an important source of foreign exchange for our state but it also attracts hundreds of thousands of workers, provides jobs and raises the income of people, as well as consumes domestic raw materials, including a number of secondary products of agriculture and forestry.

The localities that offer relatively large volumes of export handicraft goods are Ho Chi Minh City, Hanoi, Haiphong and such provinces as Ha Son Binh, Thai Binh, Ha Nam Ninh, Thanh Hoa, Hai Hung, Quang Nam-Da Nang, etc. In Thai Binh and Ha Son Binh alone, the average per capita value of export handicraft goods is about 35 dong.

The volume of export handicraft goods is getting larger everyday, but as compared with the capabilities of our country and the need of the world market this development is still slow, in terms of the quantity, quality and varieties of these goods. Production remains scattered and at a low level, with workers' skills being still poor.

In the immediate and long-term export plans, handicraft goods always play an important role in the allocation of export goods in general. With its great potential capabilities in terms of both labor and raw materials, our country can develop such goods, with the scale of production becoming larger everyday. The general direction is to strive to develop the lines of goods that are made of domestic raw materials, to pay attention to restoring and quickly developing the national traditional fine art goods, at the same time to develop in a sound manner the lines of goods made of imported raw materials and to try to fill orders from foreign countries.

To enlarge the planned allocation of various kinds of goods, to improve models and styles, to enhance the artistic character and to overcome the situation of goods being too plain are major problems. Why do bamboo blinds only bear the One-column and Ngoc Son pagoda designs? Why do lacquer paintings repeat and repeat the water buffalo, bamboo and Ha Long Bay designs? Our country has so many other rich subjects. Producers must maintain direct contact with the market and customers to study their needs and liking in order to develop additional lines of goods, with different models and styles and being all clever, durable, attractive and convenient. To strive to raise the quality of our fine art handicraft goods to the advanced level of the world while combining the national traditional character with modern scientific qualities is a permanent need that all production installations making goods for export must satisfy.

The first important measure to be taken is to reorganize production in the export handicraft sectors while rearranging and making new plans for various industries and occupations in different localities and to create concentrated production zones and centers to promote planting, exploiting and processing raw materials along the line of specialization and cooperation while overcoming the state of scattered production. Production of goods made on orders of foreign raw materials and goods that require high technology must be concentrated in cities rather than scattered in provinces.

As raw materials used in the production of goods for export mainly should come from domestic sources, it is necessary to make plans for planting and exploiting the raw material-supplying crops in both agriculture and forestry; on the other hand, we must step up export to have foreign exchange to import some very necessary raw materials which our country cannot produce yet.

Closely linked with reorganization of production and the raw material solution are the systematic training of a body of skilled workers and a bold investment in technical equipment. The state policies that encourage export of goods must be materialized and properly implemented by the organs concerned in close coordination with the Federation of Cooperatives, with urgent attention to be paid to the ones on contract and purchase prices and on investment for production installations.

EDITORIAL URGES BETTER USE OF HIGHLY SKILLED WORKERS

Hanoi QUAN DOI NHAN DAN in Vietnamese 16 Sep 81 pp 1, 4

[Editorial: "Training the Corps of Highly Skilled Workers"]

[Text] The highly skilled workers at production installations, in general, as well as the production installations of the army, in particular, are valuable assets of the country. Highly skilled workers occupy an important position in the implementation of technical plans and the application of scientific and technological advances in production; at the same time, they are the birds that lead the flock, are workers who help others and thus create the conditions for raising the skill level of the corps of manual workers and make tremendous contributions to the successful completion of the plan of each production installation.

Together with the development of science and technology, the introduction of more and more modern equipment and machinery at production installations, advanced technical procedures and the production of products of increasingly high quality and increasingly broad variety demand that the corps of highly skilled workers be rapidly increased and constitute an increasingly large percentage of the corps of manual workers.

At present, the number of highly skilled workers at the production installations of the army is small. The corps of production workers here consist primarily of grade 2 and grade 3 manual workers. The number of grade 5 or higher workers rarely exceeds 10 percent of the workforce and the deployment of these workers is not well coordinated. This has made it impossible for the national defense enterprises to meet the requirements of a regular force, modern army and made it difficult for the units engaged in economic construction to achieve high productivity and high economic returns. Therefore, training a corps of highly skilled workers for the production installations of the army is extremely necessary and is a job that must be carried out in a routine manner in every occupational field and become the responsibility of every level, every production installation within the army.

The training of the corps of highly skilled workers is a long and continuous process that is related to many factors. The realities at many production installations have shown that in order to reduce the amount of time needed to train highly skilled workers, it is necessary to attach importance at the very outset to improving the quality of learning of the students at the trade training schools. However, of greater importance is the need to utilize, deploy and assign these workers in a manner consistent with the occupation for which they were trained and the abilities of each person. Specializing and stabilizing the corps of highly skilled workers and avoiding assigning and using them in trades and sectors for which they were not trained, which greatly limits the transfer of manual workers from one place to another, are important jobs that must be performed so that manual workers gain much experience and constantly raise their skill level.

Besides giving attention to making good use of workers, each sector, each level and each installations must adopt a well coordinated plan for training the corps of manual workers. During each period, they must adopt a plan for providing advanced training, for providing new knowledge and organize the review of experiences within production in order to improve the command of theory by the corps of manual workers and improve their practical skills. It is necessary to constantly maintain and accelerate the skill training and testing movement at each production installation. This movement must be used as a school for rapidly training highly skilled manual workers.

In order to utilize and train the corps of highly skilled manual workers well, the various production installations must, besides teaching politics and ideology, heightening the sense of collective ownership and heightening the spirit of responsibility so that every manual worker voluntarily works to improve his skills, implement the policies and systems on awards and bonuses, promotions and material incentives well.

Training to become a highly skilled worker involves a process of continuous struggle by each manual worker. Besides assistance from the collective and the production unit, the effort made by each person is of decisive significance in raising his skill level. Each manual worker and each soldier in the production units of the army must display a high spirit of responsibility, humbly study, regularly gain experience and constantly endeavor to become a highly skilled worker in order to contribute more and more to the building and the protection of the socialist fatherland.

BRIEFS

POPULATION DISTRIBUTION--According to the Department of Labor and Population distribution [cucj dieeuf doongj lao doongj vaf daan cw], a number of provinces have satisfactorily carried out the task of sending people to build various new economic zones. As of late September 1981, the country had sent 17,341 families, totaling 88,690 people, from various provinces in the Red River delta and the central coastal area to vast but sparsely populated areas in the central highlands and east of Nam Bo. Nghe Tinh Province achieved 98 percent of its plan norms for distribution of labor and population this year, leading other provinces in this task. Quang Nam-da and Thai Binh provinces achieved 82.2 percent and 80.9 percent respectively. Provinces and municipalities which achieved lower percentages were: Hai Phong with only 22 percent; Hanoi, 28.6 percent; Nghia Binh, 31.4 percent; and Ha Son Binh, 35.1 percent. More than 32,200 people were moved to various state farms where industrial crops are planted, and almost 56,400 people to populace areas. In general, the task of distributing labor and population carried out over the past months was slow. As a result, the country so far has achieved only 50.7 percent of this year's plan norm. The fourth quarter is the most favorable period for distribution of the population. If this opportunity is not used, then it will affect next year's crop schedules and thus create difficulties in the people's daily lives in the newly opened land.
